IMPARLANCE, in *Law*, time to plead, is a petition that the Court will grant the defendant time to consider and advise what answer he shall return to the Plaintiff. This, continues Blackstone, in the passage cited above, is "a practice which is supposed to have arisen from a principle of Religion in obedience to that precept of the Gospel; 'Agree with thine adversary quickly whilst thou art in the way with him.'"

General Imparlance is a matter of course, where the Defendant, without saving any exception, is not bound to plead during the same Term, *Special Imparlance* is not allowed without leave of Court; it is with a saving of all exceptions to the writ, Bill, or count, and is sometimes to another day in the same Term. In *Tidd's Practice*, (476.) the following general rule is laid down, that where the Bill is filed, and perfected if special, or a common appearance entered for the Defendant under the Statute, and the Declaration filed or delivered with notice therof, four days exclusive before the end of the Term in which the Writ was returnable, the Defendant, if he live within twenty miles of London, and the venue be laid in London or Middlesex, must plead within four days; if otherwise, within eight days exclusive. But as this rule might impose, in some cases, a great hardship on the Defendant, the Judges of the respective Courts, at their Chambers, exercise an equitable jurisdiction of granting further time upon the application of the Defendant, according to the exigency of the case.

lature, which represents the people, must bring its charge before the
other branch, which consists of the nobility, who have neither the
same interests nor the same passions as popular assemblies.

Blackstone. Commentaries, vol. iv. p. 261. book iv. ch. xix.

IMPEACHMENT, in *Law*, a solemn prosecution by the
Commons of Great Britain in Parliament, before the
Lords in Parliament, as the most high and supreme
Court of jurisdiction in the kingdom. Blackstone says
that a Commoner cannot be Impeached before the
Lords for a capital offence, for he is not their Peer, and
they are not bound so to judge him; accordingly, in the
4th Edw. III., the Lords, *unâ voce*, refused to admit the
Impeachment of Simon de Beresford, who had been an
accomplice in Mortimer's treason; nor when they were
afterwards prevailed on to admit the charge, on account
of the heinousness of his crimes, did they do so without
a Protest, guarding against this instance of their assent
to the King's request being drawn into a precedent for
the future. But a Commoner may be Impeached of
high crimes and misdemeanours. A Peer may be Im-
peached for any crime. Mr. Hallam, in considering the
case of Fitzharris, in 1681, seems to think that the
refusal of the Lords to admit the Impeachment of a
Commoner for Treason (a refusal which was again
asserted by the Upper House, and vehemently protested
against by a Resolution of the Commons) is not easily
to be justified; and indeed that in the latest determina-
tion, in the case of Sir Adam Blair, subsequent to the
Revolution, after a full deliberation, and a diligent
search for precedents, the Lords resolved that they would
proceed on the Impeachment. Mr. Hallam, therefore,
considers Blackstone's position to be "inadvertent."
(*Const. Hist. xi. 316.*)

In an Impeachment, Articles are exhibited, and Ma-
nagers appointed by the Commons, and the same evi-
dence is required as in the common Courts of Judica-
ture. The Peers address the Crown to appoint a
High Steward for the greater dignity and regularity of
their proceedings. This officer was formerly elected by
themselves, and it has been considered that he is not
indispensable to an Impeachment. In the case of the
Earl of Danby, *temp. Car. II.*, it was insisted that no
pardon under the Great Seal shall be pleadable to an
Impeachment; and this claim was confirmed by the Act
of Settlement, 12th and 13th William III. c. 2. But the
King may pardon after conviction by an Impeachment.
In the case of Warren Hastings it was determined, after
a very long and able discussion, that an Impeachment
did not abate by a Prorogation or Dissolution of Parlia-
ment; for that the High Court of Parliament, though it
might not always be sitting, nevertheless existed at all
times; and that the Prosecutors being all the Com-
mons of England, not merely the House of Commons,
were not divested of their right by the temporary sus-
pension of their organ.

Blackstone is very eloquent and dignified in his
eulogy on the privilege of Impeachment. "This is a
custom derived to us from the Constitution of the
ancient Germans, who in their great Councils some-
times tried capital accusations relating to the Public,
licet apud Concilium accusare quoque, et discrimen ca-
pitis intendere. (Tacitus, *de Mor. Germ. 12.*) And it
has a peculiar propriety in the English Constitution,

IMPEACHMENT. — **IMPEDE.** — which has much improved upon the ancient model imported hither from the Continent. For though in general the union of the Legislative and Judicial powers ought to be most carefully avoided, yet it may happen that a subject, intrusted with the administration of public affairs, may infringe the rights of the People, and be guilty of such crimes as the ordinary Magistrate either dares not or cannot punish." He then continues, as we have cited him above, and concludes, "This is a vast superiority which the Constitution of this Island enjoys over those of the Grecian or Roman Republics, where the People were at the same time both Judges and Accusers. It is proper that the Nobility should judge to insure justice to the accused; as it is proper that the People should accuse, to insure justice to the Commonwealth."

The earliest instance of Parliamentary Impeachment in English History, is that of Lord Latimer, in 1376. Between those of the Duke of Suffolk, in 1449, and of Sir Giles Mompesson, in 1621, the practice appears to have fallen into disuse; Bills of Attainder, or of Pains and Penalties, having been preferred to it. Even the case last mentioned was not strictly conducted according to the forms of Impeachment; the Commons not exhibiting distinct Articles at the Bar of the House of Lords.

Fabyan, Anno 1382.

Hie thee hither,
That I may powre my spirits in thine eare,
And chastise with the valour of my tongue
All that *impedes* thee from the golden round;
Which Fate and metaphysicall ayde doth seeme
To haue thee crown'd withall.

Shakspeare. Macbeth, fol. 134.

They could not conclude a peace. The chief *impediment* thereof was the demand of the King to haue Perkin deliuered into his hands, as a reproach to all Kings, and a person not protected by the law of nations.

Bacon. Henry VII. fol. 176.

Which though in Pharaoh her desire it wrought,
His babish imbecility to see.
To the child's speech *impediment* it brought
From which he never after could be free.

Drayton. Moses. His Birth and Miracles, book i.

I perceive the soul, spotted with the least defect, accounts it [Purgatorie] an indulgent grace, as I have said, not making (in some respect) any reckoning of it, compared with the *impedement*al stain, which intercepts her fruitive love.

Mountague. Devoute Essayes, Treat. 7. vol. ii. sec. 3.

What were more easy than to say, that six legs to that unweildy body had been cumbersome and *impeditive* of motion; that the wings for so massie a bulk had been uselessse.

Hall. Works, vol. iii. fol. 432. Soliloquy 23.

Some error has been committed, in not rightly computing and subducting the contrary or *impeding* force, which arises from the resistance of fluids to bodies moved any way, and from the continual contrary action of gravitation upon bodies thrown upwards.

Clarke. Leibnitz Papers, p. 345. Fifth Reply.

Digestion in the stomach, and other faculties there, seemed not to be much *impeded*.

Boyle. Works, vol. vi. p. 457. Letter from Mr. Wallis, July 17, 1669.

Boyle. Works, vol. vi. p. 427. *Letter from Mr. Beale*, January 28,
1666.

As very many bodies of visible bulk are set a moving by external
impellents, and on that score their motions may be said to be violent,
so the generality of *impelled* bodies do move either upwards, down-
wards, &c. toward any part of the world, in what line or way soever
they find their motion least resisted.

Boyle. Works, vol. v. p. 210. *A Free Inquiry into the Received
Notion of Nature*.

For when a stone that was at rest, does of itself, upon its support
being removed, begin to fall downward; what is it that causes the
stone to begin to move? Is it possible to be an effect produced
without a cause? Is it *impelled* without an *impeller*?

Clarke. Works, vol. iii. fol. 792. *A Second Defence of the Immate-
riality, &c.*

To suppose that in spontaneous animal-motion, the soul gives no
new motion or impression to matter; but that all spontaneous animal
motion is performed by mechanical *impulse* of matter, is reducing all
things to mere fate and necessity.

to grieve, or be pained, for a fault committed.

Having or feeling no pain; no grief or sorrow for a fault committed; careless, reckless of the consequences of sin; remorseless, uncontrite.

And he that finally dieth *impenitent*, as diuers wedded freeres dye in their lechery: or he that after Tindale's doctrine, repenteth without care of thirte, & dyeth in a false heresie against his holye howsell: suche folkes be finally reprobates foreknowē vnto God before y^e world was wrought, that they would finally for *impenitence* fall vtterly to naught.

Sir Thomas More. Workes, fol. 573. The Second Part of the Confutation of Tyndale.

He punishes one sin with another, vile acts with evil habits, these with a hard heart, and with obstinacy, and obstinacy with *impenitence*, and *impenitence* with damnation.

Taylor. Sermon 8. fol. 75. Of Godly Fear.

Let us, therefore, amend our lives with all speed; lest through *impenitency* we run into that stupidity, which we now seek all means so warily to avoid, the worst of superstitions, and the heaviest of all God's judgments, Popery.

Milton. Prose Works, vol. ii. fol. 127. Of True Religion, &c.

Spiritually there is never a perfect calm but after a tempest; the wind and earthquake and fire make way for the soft voice. But I pity the flatteries and self applauses of a careless and *impenitent* heart.

Hall. Works, vol. iii. fol. 425. Soliloquy 11.

The condition required of us is a constellation of all the Gospel graces, every one of them rooted in the heart, though mixed with much weakness, and perhaps with many sins, so they be not wilfully and *impenitently* lived and died in.

Hammond.

The sum of what I have said, is this, That if no man does, nor can repent, without such a degree of God's grace as cannot be resisted, no man's repentance is commendable, nor is one man's *impenitence* more blameable than another's; Chorazin and Bethsaida can be in no more fault for continuing *impenitent*, than Tyre and Sidon were.

Tillotson. Sermon 119. fol. 103.

Every wilful sinner who adds *impenitency* to his sin, commits the sin unto death; because there is no other condition of pardon allow'd by the Gospel without true repentance.

Stillingfleet. Sermons, vol. iv. p. 33.

The dispensation of the Gospel, though it be unspeakably more benign, more gracious, more encouraging to the good and virtuous, is, at the same time, more awful, more terrifying, to resolved *impenitent* sinners, than the dispensation of nature.

I find that the remotest muscle in my body moves at the command of my will, and since I see the energy of my soul in every particle of my body, though not using intellectual actions in every part, yet using some that are *imperate*, as local motion; some that are natural and involuntary, as the pulse of my heart, the circulation of my blood, my digestion, sanguification, distribution, augmentation.

Hale. Origin of Mankind, ch. i. fol. 22.

Special providence in relation to the acts themselves, are those special actings of the divine power and will, whereby he acts either in things natural or moral, not according to the rules of general providence, but above, or besides, or against them: and these I call the *imperate* acts of divine providence.

Id. Ib. ch. i. fol. 36.

The words, though they are delivered *imperatively*, yet are a plain promise; as if it had been said, Sow in righteousness, and then you shall reap in mercy. For it is usual in Scripture for the divine promises to be delivered in the *imperative* mood, to signify, that if that be done which God commands, his promise is sure and certain, and presently performed.

Bishop Bull. Works, vol. i. p. 34. Sermon 1.

Boyle. Works, vol. v. p. 620. The General History of Air.

There is yet another way by which a temptation arrives to its highest pitch or proper hour; and that is by a long train of gradual, *imperceivable* encroachments of the flesh upon the spirit.

South. Sermons, vol. vi. p. 242.

And this *imperceivableness* of the impressions made upon our souls by the Holy Spirit, was that which our Saviour signified to Nicodemus, in the third of St. John, by the similitude of a wind, which, saith he, we hear the sound of; but we know not whence it cometh, nor whither it goeth.

Sharpe. Works, vol. iii. p. 83. Sermon 5.

He [Agricola] moulded that fierce nation by degrees to soft and social customs; leading them *imperceptibly* into a fondness for baths, for gardens, for grand houses, and all the commodious elegancies of a cultivated life.

Burke. Works, vol. x. p. 218. An Abridgement of English History.

I have more than once had thoughts of a kind of project for the advancement of experimental philosophy, consisting of such heads as these: A summary account of what is attained already. The *imperfectness* of our present attainments, &c.

Boyle. Works, vol. iii. p. 424. The Usefulness of Experimental Philosophy.

The rights called, in contradistinction to the former class, *imperfect*, are necessary to the happiness of Society, and in themselves most sacred, but cannot be vindicated by force or by legal prosecution. Such is a benefactor's right to the gratitude of the person to whom he has done good; the poor man's right to charity; and the right which all men have to the common offices of humanity.

Save that he wol conveyen his matere.

Chaucer. The Clerkes Prologue, v. 7930.

Where it will not be *impertinent* to shewe the maner of their hunting the Seal which they make this oyle of.

Hakluyt. Voyages, &c. vol. i. fol. 478. *The Soile of Russia*.

But set the case, that the Romans would take no knowledge of his coming into Asia, as a matter *impertinent* unto them; can they dissimule also, that now he is come over into Europe with all his forces both for land and sea and little wanteth of making open warre upon the Romanes? *Holland. Livius*, fol. 847.

Quintius was thought by the Achæans to have spoken not *impertinently*, but to have answered them both fully.

Id. Ib. fol. 917.

If we engage into a large acquaintance and various familiarities, we set open our gates to the invaders of most of our time: we expose our life to a quotidian ague of frigid *impertinencies*, which would make a wise man tremble to think of.

Cowley. Essay 3. Of Obscurity.

Ans. Yes, the time is taken up with a tedious number of liturgical tautologies and *impertinencies*.

Milton. Works, vol. i. fol. 83. *Animad. upon Rem. Def.*

But he that hath been often told his fault,
And still persists, is as *impertinent*
As a musician that will always play,
And yet is always out at the same note.

Roscommon. Horace. Art of Poetry.

I'd have the expression of her thoughts be such,
She might not seem reserv'd, nor talk too much:
That shows a want of judgement, and of sense;
More than enough is but *impertinence*.

Pomfret. The Choice.

Wit and profaneness are infinitely different things, as likewise is wit and *impertinency*.

Sharpe. Works, vol. iv. p. 309. *Sermon 18*.

But what puts the satyric purpose of the Rime of Sir Topaz out of all question is, that this short Poem is so managed as, with infinite humour, to expose the leading *impertinencies* of books of chivalry.

Hurd. Works, vol. iv. p. 336. *Letters on Chivalry and Romance*, let. 11.

Let us examine one of the best of his Plays, I mean the *Hippolytus*; whose Chorus, throughout, bears a very idle and uninteresting part, hath no share in the action, and sings *impertinently*.

Id. Ib. vol. i. p. 149. *Notes on the Art of Poetry*.

IMPERTRANSIBILITY, *in*, *per*, *trans-ire*; *in*, privative, and *trans-ire*, to pass over or through.

Impossibility to be passed over or through.

[I have] willingly declined those many other ingenious reasons given by others (against the eternity of mankind,) as of the *impe-rtansibility* of eternity, and the impossibility therein to attain to the present term or limit of antecedent generations, or Ages, &c.)

Hale. Origin of Mankind, ch. v. sec. 1. fol. 110.

IMPERTURBATION, Lat. *imperturbatus*, *in*, *per*, and *turbatus*; *turbare*; Gr. *τὺρβη*; a mob, crowd, or multitude. See to **DISTURB**.

Indisturbance, and consequentially,

Quietude, tranquillity, calmness.

Wherefore in our copying of this equality and *imperturbation*, we must profess with the Apostle, we have not received the spirit of the World, but the spirit which is of God; not in the learned words of Man's wisdom, but the doctrine of the Holy Ghost.

Mountague. Devoute Essayes, vol. i. fol. 342. *Treat 19. sec. 2*.

IMPE'RVIOUS, Lat. *impervius*, *in*, privative,
IMPE'RVIOUSLY, and *pervius*, having a way
IMPE'RVIOUSNESS, through, passable; *per*, and *via*, a vehendo, *quâ ire potest vehiculum*.

That has no way through, impassable, that has no path or passage through; impenetrable.

The heart of man what art can e'er reveal?

A wall *impervious* between
Divides the very parts within,
And doth the heart of man ev'n from itself conceal.

Cowley. Ode upon Dr. Harvey.

But lest the difficulty of passing back
Stay his return, perhaps, over this gulfe
Impassable, *impervious*, let us try
Advent'rous work.

Milton. Paradise Lost, book x. l. 254.

Let them declare by what mysterious arts
He shot that body through th' opposing might
Of bolts and bars *impervious* to the light
And stood before His train confess'd in open sight.

Dryden. The Hind and the Panther.

He wants no mail of proof whose skin was made
Impervious to the javelin, dart, or blade.

Hoole. Orlando Furioso, book xii. l. 214.

But as a riuer from a mountaine running,
The further he extends, the greater growes,
And by his thristie race strenthens his streame,
Euen to ioyne battell with th' *imperious* sea.

Hakluyt. *Voyages, &c.* vol. iii. fol. 669. M. G. C.

Harkē O ye Levites & prestes: be ye sanctified and make cleane the house of the Lorde the God of your fathers, and put awaie all vnclannes from the sanctuarie, &c. I prai you what could he speke more *imperiousli*.

Stephen, Bishop of Wynchester. *Of True Obedience*, fol. 29.

Most sacred vertue she of all the rest,
Resembling God in His *imperiall* might;
Whose soueraigne power is herein most exprest,
That both to good and bad He dealeth right,
And all His workes with justice doth bedight.

Spenser. *Faerie Queene*, book v. can. 1.

The greatest news I can write to you is, of a bloody banquet that was lately at Leige, where a great faction was a fomenting twixt the *imperialists* and those that were devoted to France.

His surname, so contemptible in English, sounds *imperially* and episcopally when Latinized.

Fuller. *Worthies. Durham*.

Next after her, the winged God himselfe
Came riding on a lion rauinous,
Taught to obey the menage of that elfe,
That man and beast with powre *imperious*
Subdueth to his kingdome tyrannous.

Spenser. *Faerie Queene*, book iii. can. 12.

From heart of very heart, great Hector, welcome.

HECT. I thanke thee, most *imperious* Agamemnon.

Shakspeare. *Troilus and Cressida*, fol. 98.

A place there is, where proudly rais'd there stands
A huge aspiring rock neighb'ring the skies,
Whose surly brow *imperiously* commands
The sea his bounds, that at his proud feet lies.

Daniel. *History of Civil Wars*, book ii.

We know how to bear humble minds in eminence of places, how to command without *imperiousnesse*, and to comply without exposing our places to contempt.

Hall. *Workes*, vol. iii. fol. 158. *Episcopacy by Divine Right*.

When *empire* first from families did spring,
Then every father govern'd as a king:
But you, that are a sovereign prince, allay
Imperial power with your paternal sway.

Dryden. *To his Sacred Majesty*.

Think not my judgement leads me to comply
With laws unjust, but hard necessity:
Imperious need, which cannot be withstood,
Makes ill authentic for a greater good.

Id. *The Hind and the Panther*.

The Earl of Strafford continued to press the States to come into the queen's measures, which it was said he managed with great *imperiousness*.

Burnet. *Own Times. Queen Anne, Anno 1712*.

Where is the glory of *imperial* sway,
If subjects none but just commands obey.

Churchill. *The Candidate*.

The unhappy Philosopher of Malmsbury, scorning to argue upon the matter, *imperiously* pronounced, that he who presumed to propagate Religion in a society without the leave of the magistrate, was guilty of the crime of *lese majesty*, as introducing a power superior to the leviathan's.

Warburton. *Works*, vol. i. p. 228. *The Divine Legation*, book i. sec. 3.

He [Swift] apparently flattered his own arrogance by an assumed *imperiousness*, in which he was ironical only to the resentful, and to the submissive sufficiently serious.

Johnson. *Works*, vol. ix. p. 38. *The Life of Swift*.

IMPEST, *in* and *pest*.

To fill with pestilence or plague, to infect.

So may your hours soft-sliding steal away,
Unknown to gnarring slander and to bale,
O'er seas of bliss Peace guide her gondelay,
Ne bitter dole *impest* the passing gale.

Whiche desyre, *impetrated* and obteyned, the messenger shortly returned to his lorde and prince.

Id. *Richard III. The third Yere*.

And I shall always assign my prayers towards the *impetrating* that of God, that this penitential satisfaction may be so much blessed, as to restore some value of time thither, where I am to account for so much idle dissipation of it.

Mountague. *Devoute Essayes. Preface*, sig. b. 1.

I may better intitle this, an expiatory offering, than a propiciatory, the first being an order to the discharge of a debt, the last to the *impetration* of some favour.

Id. *Ib.* sig. c.

In those better blessings, earnestness of desire, and fervour of prosecution, was never but answered with a gracious *impetration*.

Hall. *Balm of Gilead*, ch. iv. sec. 6.

Thy prayers, which were most perfect and *impetrative*, are they by which our weak and unworthy prayers receive both life and favour.

Id. *Contemplations. The Walk upon the Waters*.

Now alms are therefore effective to the abolition and pardon of our sins, because they are preparatory to, and *impetratory* of, the grace of repentance, and are fruits of repentance.

Taylor. *Holy Dying*, ch. ii. sec. 3.

Which practice (earnest, assiduous prayer) is indeed doubly conducive to this purpose: both in way of *impetration*, and by real efficacy.

Violent, precipitate, vehement, "sweeping away whatever is before it." Cotgrave.

Their steele-head speares they strongly couch't, and met
Together with *impetuous* rage and force;
That with the terrour of their fierce affret,
They rudely droue to ground both man and horse,
That each (awhile) lay like a senselesse corse.

Spenser. *Faerie Queene*, book iii. can. 9.

The swiftness and violence of motion is wont to inflame the aire that is within stones, yea, and in lead, as cold as it is: much more then that which is in fire, being whirled about, and turned with so great celerity and *impetuosity*. Holland. *Plutarch*, fol. 948.

And therewith all at once at him let fly
Their fluttering arrowes, thick as flakes of snowe,
And round about him flocke *impetuously*,
Like a great water flood.

Spenser. *Faerie Queene*, book ii. can. 11.

The magnanimous and warlick General Hannibal, of whom it is said, that he very well knew how to overcome and assuage the fury and *impetuosity* of an enemy, but that he made no good use of his victories suffering himself afterwards to be overtaken by carelessness and neglect.

The Life of John Guttemberg from Thevet, fol. 70.

Then, as a falcon from the rocky height,
Her quarry seen, *impetuous* at the sight,
Forth springing instant darts herself from high,
Shoots on the wings, and skims along the sky.

Pope. *Homer. Iliad*, book xiii.

He [Sir William Temple's son] who had no other visible cause of melancholy besides this, went in a boat on the Thames, near the bridge, where the river runs most *impetuously*, and leaped into the river, and was drowned.

Burnet. *Own Times. James II. Anno 1689*.

There being no kind of vice which men would not abandon themselves unto, considering the *impetuosity* of their own natural appetites, and the power of external temptations, were this restraint from Religion once removed or abolished.

Wilkins. *Of Natural Religion*, book ii. ch. i.

The quicksilver, by its sudden descent, acquires an *impetus* super-added to the pressure it has upon the score of its wonted gravity.

Boyle. *Works*, vol. i. p. 138. *Of the Spring and Weight of Air*.

Is there a passion, whose *impetuous* force
Disturbs the human breast, and breaking forth
With sad eruptions, deals destruction round,
Like flames convulsive from th' Etnean mole,
But by the magic strains of some soft air
Is harmoniz'd to peace?

Croper. *The Power of Harmony*, book i.

Beaten from these shores, the stream of their *impetuosity* bore towards the northern parts of France, which had been reduced to the most deplorable condition by their former ravages.

IMPIOUSNESS. } may be, I have not discovered, says
Vossius.) See EXPIATE. By common usage, *impiety* is,

Ungodliness, irreligion, profaneness, unrighteousness; wickedness; neglect, irreverence, contempt of God or of religious duties, of sacred observances.

The noblemen of Cyprus grew so insolent and proud, and withall so *impiously* wicked as that they would at their pleasure command both the wives and children of their poore tenants to serve their unclean lusts, & holding them in such slavery as though they had beene no better then dogges, would wage them against a grayhound or spaniel.

Hakluyt. *Voyages*, &c. vol. ii. fol. 309. M. Richard Wrag.

O War! begot in Pride and Luxury,
The child of Malice and revengeful Hate;
Thou *impious* good and good *impiety*,
Thou art the foul refiner of the State.

Daniel. *History of Civil Wars*, book iv.

Ungrateful times! that *impiously* neglect
That worth, that never times again shall show.
What! merits all our toil no more respect?

Id. *Ib.* book v.

Priestcraft grew to be another word in fashion, and the enemies of Religion vented all their *impieties* under the cover of these words.

Burnet. *Own Times. William III. Anno 1698*.

'Twas hence at length just vengeance thought it fit,
To speed their ruin by their *impious* wit.

Dryden. *Astræa Redux*.

In the year 1511, William Potier was indicted for saying, There were three Gods, and that he knew not for what Christ's passion, or Baptism, availed; and did abjure. Whether he only spoke these things *impiously*, or whether he held them in opinion, is not clear.

Burnet. *History of the Reformation*, vol. i. book i. part i. p. 53.

For so good a purpose as that of assisting in the common cause of *impiety*, he [Bolingbroke] thought fit to come out of the clouds, and to attempt a popular vein of writing, as the more likely to get himself read and talked of in the world.

Warburton. *Works*, vol. i. p. 65. Hurd's *Life of the Author*.

They [Job, ch. ii. v. 10.] were the words of Job, at a time when, to his other calamities, this domestic affliction was added, that one who ought to have assuaged and soothed his sorrows provoked his indignation by an *impious* speech.

Blair. *Sermon 16*. vol. iv. p. 222.

IMPINGE, Lat. *impingere*, (*in*, and *pang-ere*, to fix, infix, or drive in,) to strike or dash against.

To strike or dash against.

A second (hypothesis) is, that of the ingenious Sir K. Digby, a summary of which is, that things are reserved in the memory by some corporeal exuvia and material images; which having *impinged* on the common sense, rebound thence into some vacant cells of the brain, where they keep their ranks and postures in the same order that they entered, till they are again stirr'd up; and then they slide through the fancy, as when they were first presented.

Glanvil. *The Vanity of Dogmatizing*, ch. iv. sec. 7.

So cautious and tender was the magistrate (even under this horrid provocation) of violating the rights of Religion in this capital point of mysterious worship; nor did the heat of reformation carry him to *impinge* upon any other of the nocturnal rites, then celebrated in Rome; such as the mysteries of the *Bona Dea*.

Warburton. *Works*, vol. iv. p. 59. *Preface to the Edition of 1758*.

In the number of these superstitions is the popular opinion, That God, in the common government of the world, punisheth children for the crimes of their parents: a dispensation peculiar to the Jewish nation; and there indeed administered with the highest equity: but in the present order of things, not to be employed without *impinging* on God's justice.

plentiful *implation* there may perhaps succeed a disruption of the
matrix, as it happeneth sometimes in the long and slender fish acus.

Sir Thomas Brown. *Vulgar Errors*, book iii. ch. xvi.

IMPLO'RE, v. } Fr. *implorer*; It. *implorare*;
IMPLO'RE, n. } Sp. *implorar*; Lat. *implorare*, (in,
IMPLORA'TION, } and *plorare*, distinguished from
IMPLO'RER. } *lacrymare*, in degree,) *plorans*
opem poscere, to beg or beseech aid with cries.

To beg or beseech aid; help or succour—with cries
—to entreat earnestly, to supplicate, to pray for.

For nothing so much pity doth *implore*
As gentle ladies helplesse misery.

Spenser. *Faerie Queene*, book iii. can. 11.

But he would not endure that wofull theme
For to dilate at large, but urged sore
With pearcing words, and pittifull *implore*,
Him hastie to arise.

Id. *Ib.* book ii. can. 5.

Wicked hearts know they deserve ill at God's hands, and therefore
they doe all they can to avoid the eyes of His displeased justice, and
if they cannot do it by colours of dissimulation, they will doe it by
imploration of shelter; they shall say to the rocks, fall on us, and
cover us.

Hall. *Workes*, vol. i. fol. 1183. *Contemplations. Jeroboam's Wife*.

My daily bread is literally *implor'd*;
I have no barns nor granaries to hoard.

Dryden. *The Hind and the Panther*, part iii.

The same kind of experience [personal] may assure him of the
practical possibility of performing the duties and functions of a
Christian, by the help of those assistances that God gives the faithful
implorers, to enable them to obey and please Him.

Boyle. *Works*, vol. vi. p. 717. *The Christian Virtuoso*, part ii.

Leaving others to be judged by Him who searcheth the heart, let
us *implore* His assistance for enabling us to act well our own part,
and to follow Christ.

Blair. *Sermon* 8. vol. iv. p. 117.

IMPLOY, anciently also, and now usually, written
Employ, q. v.; Fr. *employer*; It. *impiegare*; Sp. *em-
plear*, from the Lat. *implicare*, to infold. (See to
IMPLY.)

To infold, to enclose, to entangle, to engage, to
occupy, to busy, or be busy, to exercise.

Onely the use of armes, which most I ioy,
And fitteth most for noble swayne to know:
I have not tasted yet; yet past a boy,
And being now high time these strong ioynts to *employ*.

Spenser. *Faerie Queene*, book vi. can. 2.

The King much troubled with the French affair,
Which as a shapeless and unwieldy mass,
Wholly *employ'd* the utmost of his care.

Drayton. *The Barons' Wars*, book iii.

In his Dedication, or first Preface to his *Morals*, after some very
insipid rhetoric, and figurative dialect *employ'd* against the study
and Art of speech, he has another fling at the classic authors and
discipline.

I'MPLEX.

Fr. *impliquer*; It. *implicare*,
Sp. *implicar*; Lat. *implicare*, in,
and *plicare*; Gr. *πλέκ-ειν*, to knit,
to intertwine.

To *imply*;—to intertwine, to in-
terweave, to infold, to inwrap; to
involve, to include; to comprise.

Implicit; infolded, inwrapped;
met. my faith is *implicit* in him; my faith is *wrapped*
up in him: consequentially, entire, unlimited, unre-
stricted, wholly given up to.

It *implyeth* fyrst repugnance to my sight and reason, that all this
world should bee made of nothyng, and that a virgin should bring
forth a childe. But yet when I see it written w^e the wordes of my
faith, which God spake, & brought it to passe: then *implyeth* it no
repugnance to me at all.

Sir Thomas More. *Workes*, fol. 1127. *Answer to the Poysoned
Booke*, &c.

The true teachyng is that Christes very body is present vnder the
forme of bread, in as many hoostes as he cōsecrate, in how many
places soeuer the hoostes be cōsecrate, & is there really & substan-
cially, whiche wordes really & substācially be *implied*, whē we say
truly presēt.

Stephen. Bishop of Wynchester. *The Presence of Christe in the
Sacrament*, fol. 35.

And the Eutichians affyrmyng catholiquely to be but one person
in Christe, did perniciously saye ther was therfore but one nature in
Christe, accomptynge by *implication* the humane nature transfused
into the diuine nature and so confounded.

Id. *Of Transubstanciation*, fol. 120.

Ne doe they need with water of the ford,
Or of the clowdes, to moysten their roots dry;
For in themselues, eternall moysture they *imply*.

Spenser. *Faerie Queene*, book iii. can. 6.

There did appeare unto her heauenly spright
A wondrous vision which did close *imply*
The course of all her fortune and posteritie.

Mountague. *Appeale to Cæsar*, ch. i.

Highways being without exception necessary, as well for peace as
war, have been defended in the Roman laws; they are taken in ours,
to be in that respect (as they are by *implication* of the name) the
king's highways, and *res sacræ*.

Drayton. *Poly-olbion*, song 16. *Selden's Illustrations*.

Nor is it seemly or piously attributed to the justice of God His
known hatred of sin, that such a heinous fault as this through all the
law should be only whip'd with an *implicit* and oblique touch.

Milton. *Works*, vol. i. fol. 196. *The Doctrine, &c. of Divorce*.

But soon the reasons why you're lov'd by all,
Grow infinite, and so pass Reason's reach,
Then back again t' *implicit* Faith I fall,
And rest on what the catholic voice doth teach.

IMPLY. They pretend it is *implicitly* reprov'd in these words, *Deut.* xxiv. 4. after she is defiled.
IMPOISON *Milton. Works*, vol. i. fol. 196. *The Doctrine, &c. of Divorce.*

It is common, and indeed natural, with most people who are either averse to thinking for themselves, or are diffident of the rectitude of their own opinions, to adopt *implicitly*, and retain with zeal, the opinions of those who have acquired a character in the world for ingenuity or penetration.

P. Fletcher. Piscatory Eclogues. Introduction.

By another article, the militia was to remain in the parliament for ten years: thereby *implying*, if I mistake not, that the right of granting it was in the King, and consequently that we had done him wrong in contending with him for it.

Ludlow. Memoirs, vol. i. p. 231.

If the contexture of the corpuscles, whereof a body consists, be intricate, or the cohesion strong, their mutual *implication*, or their adherence to each other, will make one part hinder another from flying separately away.

Boyle. Works, vol. iv. p. 295. *Of the Mechanical Origin and Production of Volatility.*

The fable of every Poem is, according to Aristotle's division, either simple or *implex*. It is called simple when there is no change of fortune in it, *implex* when the fortune of the chief actor changes from bad to good, or from good to bad.

Spectator, No. 297.

Which [faith] they generally taught, consisted chiefly in an *implicit* believing whatever the Church proposed, without any *explicit* knowledge of particulars.

Burnet. History of the Reformation, vol. i. p. 519. Anno 1540.

Thus a good present behaviour is an *implicit* repentance for any miscarriage in what is past; but present slackness will not make up for past activity.

Spectator, No. 374.

IMPO'LTICK, *πολιτεία*, a city or State, the go-
IMPO'LTICLY, vernment of a city or State: gene-
IMPOL'TICALLY. rally, government, management.

And *impolicy*,

Want of government or management; unskilful, imprudent, injudicious, indiscreet management; improvidence or imprudence.

But in pursuit of their own remedies and suits they [the merchants] do it so *impolitically*.

Bacon. Works, vol. ii. p. 199. *Petition of the Merchants.*

I could never yet find, that these men had any other reason or argument to defend themselves and their practices by, but that senseless and *impolitick* encouragement which has been all along given them.

South. Sermons, vol. iv. p. 412.

Those who governed Scotland under him, [Charles the Second,] with no less cruelty than *impolicy*, made the people of that Country desperate; and then plundered, imprisoned, or butchered them, for the natural effects of such despair.

Mallet. Amyntor and Theodora. Preface, can. 1.

In effect, it would be the most unjust and *impolitick* of all things, unequal taxation.

Burke. Works, vol. viii. p. 353. *Letters on a Regicide Peace.*

Yet however confidently Voltaire and others may please to talk, it will be no difficult matter to prove that the Crusades were neither so unjustifiable, so *impolitical*, nor so unhappy in their consequences, as the superficial readers of History are habituated to esteem them.

Mickle. The Lusiad, book vii.

And however *impolitically* despotic the Spanish Governments may be, still do these colonies enjoy the opportunities of improvement, which in every Age arise from the knowledge of Commerce and of Letters.

Id. Ib. Introduction.

The most admired women cannot have many Tunbridge, many Bath seasons to blaze in; since even fine faces, often seen, are less regarded than new faces, the proper punishment of showy girls, for rendering themselves so *impolitically* cheap.

Johnson. The Rambler, No. 97.

IMPO'LSHED, *In*, and *polished*, or *polite*;
IMPOL'TE. *unpolished* is more usual. *Polish*,
 from the Lat. *polire*, which some think from the Gr. *πόλιν*, as *urbanus* from *urbs*. Vossius prefers, with C. Scaliger, the Gr. *πολ-εῖν*, to turn; or that it may be from *φάλος*, splendid, bright.

Not brightened or smoothened; rough, rude, uncivilized.

A book once known ne'er quits the author; if
 Any lies yet *impolish'd*, any stiff,
 Wanting its bosses, and its cover, do
 Get that: I've such, and can be secret too.

Cartwright. Martial, lib. i. epig. 67.

This (not to read men, and converse with living libraries) is that deplorable effect which universally renders our bookish men so pedantically morose and *impolish'd*, and in a word, so very ridiculous.

Evelyn. Miscellaneous Writings, p. 537. *On Public Employment.*

In hopes also of a short vacation for the consummation of my Malayan grammar, I humbly beg the return of that *impolished* specimen.

Boyle. Works, vol. vi. p. 614. *Mr. William Mainston to Mr. R. Boyle*, December 19, 1682.

To your honour's hands, as the great patron of languages and Arts, this *impolite* grammatical tract of the Malayan dialect presumeth to make its submissive addresses, and to stand the fate of your judicious and impartial censure.

IMPONDEROUS, *im*, and *ponderous*; the Lat. *ponderosus*, from *pondus*, a weight; *pend-ere*, to weigh. Not weighty, light.

If they produce visible and real effects by *imponderous* and invisible emissions, it may be uniuert to deny the possible efficacy of gold, in the nonomission of weight; or deperdition of any *ponderous* particles.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. v.

IMPONED is (says Ritson) from the Lat. *imponere*, and means to put down, to stake. The Quarto, 1604, reads *impawned*, q. v.

OSR. The king, sir, has wag'd with him six Barbary horses, against the which he *impon'd*, as I take it, six French rapiers and poniards.

Shakspeare. *Hamlet*, fol. 280.

IMPOROUS, *in*, privative, and *porous*, from *pore*; Fr. *pore*; It. *poro*; Sp. *poros*; Gr. *πόρος*, from *πέρι-ειν*, *transire*, quod per eos transeant sudores, sordes et pili. Minshew.

Having no pores, or small holes through which any thing can pass.

And the reason thereof is its [the crystal] continuity: as having its earthy and salinous parts so exactly resolved, that its body is left *imporous* and not discreted by atomical terminations.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. i.

If all these atoms should descend plum down with equal velocity, as according to their doctrine they ought to do, being all perfectly solid and *imporous*, and the vacuum not resisting their motion, they would never the one overtake the other, but like the drops of a shower would always keep the same distances.

Shakspeare. Troilus and Cressida, fol. 83.

The only and certain scale of riches, arising from trade in a nation, is the proportion of what is exported for the consumption of others, to what is imported for their own.

Sir Wm. Temple. On the United Provinces, vol. i. ch. vi. p. 175.

The cause was not common and ordinary, such as were wont to be tried before the governours of provinces, but of an unusual and publick nature; not a question of words and names, as Gallio thought it, but a matter of the highest importance to the world.

Stillingfleet. Sermon 1. vol. ii. p. 2.

It was visible, that since there was to be a free trade opened between Scotland and England, after the first of May, and since the duties in Scotland, laid on trade, were much lower than in England, that there would be a great importation into Scotland, on the prospect of the advantage that might be made by sending it into England.

Burnet. Own Times. Queen Anne, Ann. 1707.

The restraints upon importation were of two kinds. First, restraints upon the importation of such foreign goods for home consumption as could be produced at home, from whatever Country they were imported: 2ndly, &c.

Smith. Wealth of Nations, book iv. ch. i.

On this statement the reader will observe, that I take the imports from, and not the exports to these conquests, as the measure of these advantages which we derived from them.

Burke. Works, vol. ii. p. 27. Observations on a late State of the Nation.

But O th' important budget! usher'd in
With such heart-shaking music, who can say
What are its tidings.

Cowper. The Task, book iv.

All these concurring parties do by no means love one another enough to agree in any point, which was not evidently, and importantly, right.

Burke. Works, vol. iii. p. 395. Speech at Bristol previous to the Election.

It was brought home in a cargo of new fashions: and worn for some time, with that levity by the importers, and treated with that contempt by the rest, as suited, and was due, to the apishness of foreign manners.

Warburton. Works, vol. ix. p. 328. Sermon 16.

IMPORTUNE, v. } Fr. importun; It. and Sp.

IMPO'RTUNATOR. } tem.—Unquiet, not having
rest or a resting place. He (says Vossius) is importune, who does not suffer others to rest.

To disquiet or disturb, to trouble or molest, sc. by incessant solicitation; to beg, beseech or solicit without ceasing, incessantly; tiresomely, vexatiously; unseasonably.

Importune, the adjective, is also used in old writers (as importunus in Lat.) more strongly; sc. distressing, relentless, cruel.

Spenser uses the verb importune, as equivalent to import.

He is apaide with his fortune
And for he will be importune.

Chaucer. The Romant of the Rose, fol. 142.

He syndeth hys hope moch therwith reuyed
He dare importune the Lorde on euery syde.

Thou often hast sollicitated this lady.

Beaumont and Fletcher. The Knight of Malta, act i. sc. 3.

The other noblemen and captains of his own estate, came to him to his tent, and were so importunate of him by intreaty and perswasion, that they got him out of his tent to shew himself to his souldiers.

Sir Thomas North. Plutarch. Sertorius.

For long ago the calendar
Of women-saints was filde
Fewe not of opportunitie,
Importunated, yeald.

Warner. Albion's England, book xii. ch. lxxvi.

[Every man for himselfe] entreated and besought them importunately, that all things whatsoever they stood in need of, either for themselves or their beasts, they would receive at his hands especially.

Holland. Livius, fol. 662.

Yet shall he long time warre with happy speed,
And with great honour many battels try:

But at the last, to th' importunity

Of froward fortune shall be forc't to yeeld.

Spenser. Faerie Queene, book iii. can. 3.

But since substantial grief so soon destroys,
The gust of all imaginary joys,
Who would be too importunate to live,
Or more for life, than it can merit, give?

Pomfret. Cruelty and Lust.

Their proceedings therein were much obstructed by divers honest citizens, who importunately solicited them to treat with the army.

Ludlow. Memoirs, vol. i. p. 180.

But of all other passages of Scripture, the necessity and efficacy of this importunity in prayer that we speak of, is most lively set forth to us by our blessed Saviour, in that remarkable parable of his in the eleventh of St. Luke's Gospel.

Sharpe. Works, vol. iv. p. 64. Sermon 4.

There goes a report that Charles the Fifth, being importuned by Eccius, and other wretches like him, to arrest Luther, notwithstanding the safe-conduct granted to him, replied, 'I will not blush with my predecessor Sigismund.'

Glanvil. The Vanity of Dogmatizing, ch. xiv. p. 127.

Then this desire of nature is not vain,
She covets not *impossibilities*;
Fond thoughts may fall into some idle brain,
But one assent of all is ever wise.
Davies. The Immortality of the Soul, sec. 31.

Yet they which do affirm, it was the image self that spake, do
favour this miracle, grounding their proof upon the opinion of the
fortune of Rome: the which, from so base and mean beginning had
impossibly attained unto so high glory and power, as it had without
the singular favour of the Gods: and that hath manifestly appeared
unto the world, by sundry great proofs and examples.
Sir Thomas North. Plutarch, fol. 116. Camillus.

With such a chief the meanest nation blest,
Might hope to lift her head above the rest:
What may be thought *impossible* to do
By us, embraced by the sea and you?
Waller. To my Lord Protector.

The motion of the Sun is plain and evident to some astronomers,
and of the Earth to others; yet we none of us know which of them
moves, and meet with many seeming *impossibilities* in both, and be-
yond the fathom of human reason or comprehension.
Sir Wm. Temple. Works, vol. iii. p. 475. Of Ancient and Modern Learning.

Setting aside the improbability, or rather *impossibility*, of such
huge masses floating out of rivers, in which there is hardly water for
a boat, none of the productions of the land were found incorporated,
or fixed in it; which must have unavoidably been the case, had it
been formed in rivers either great or small.

IMPRESSING, or more correctly *Impresting*, i. e. paying earnest to seamen, by the King's commission to the Admiralty, is a right of very ancient date, and established by prescription, though not by Statute. Many Statutes, however, imply its existence, one as far back as 2 Richard II. c. 4.; and further authorities may be found in Barrington's *Obs. on Anc. Stat.* 334. The various exemptions are contained in 7 and 8 William III. c. 21.; 2 Anne, c. 6.; 4 and 5 Anne, c. 19.; 13 George II. c. 17.; 2 George III. c. 15.; 11 George III. c. 38.; 19 George III. c. 75., and others. There is a judgment by Lord Mansfield, given in Cowper, (517.) which in a few words places the practice, its grievances, and its advantages in a clear light. "The power of *Pressing* is founded upon immemorial usage allowed for Ages. If not, it can have no ground to stand upon, nor can it be vindicated or justified by any reason but the safety

IMPRESS. of the State. The practice is deduced from that trite maxim of the Constitutional Law of England, that private mischief had better be submitted to, than public detriment and inconvenience should ensue. Though it be a legal power, it may, like many others, be abused in the exercise of it."

IMPRIMATUR.

The legality of Impressment was very learnedly and nicely argued and determined in the affirmative, in 1743, by Mr. Justice Forster, at that time Sergeant, and Recorder of Bristol, when trying the case of Alexander Broadfoot, who, resisting a Press warrant, shot a sailor dead. The terms of the warrant not having been complied with, the Jury was directed to bring in a verdict of manslaughter, but the Judge at much length pronounced a strong opinion in favour of the legality of the practice. It is supported also in a Pamphlet (*Essay on the Legality of Impressment Seamen*) published in 1778 by Mr. Charles Butler, in which, as in all his other Works, the learned writer has concentrated great variety of useful and interesting information.

By 16 Charles I. c. 28. the custom of Impressment *Soldiers* is declared to be illegal. The preamble of an Act, empowering the King to levy troops by this compulsory method for the special exigency of the Irish Rebellion, declares that "by the laws of the Realm none of his Majesty's subjects ought to be Impressed or compelled to go out of his Country to serve as a

Soldier in the Wars except in case of necessity of the sudden coming in of strange enemies into the Kingdom, or except they be otherwise bound by the tenure of their lands or possessions." To what a frightful extent this prerogative (as it was supposed to be) had sometimes being carried, is plain from the case of Read, an Alderman of London, *temp.* Henry VIII. This man, having refused to contribute, or not coming up to the expectation of the Commissioners appointed to levy a Benevolence in the year 1544, although advanced in years, was Impressed as a foot-soldier for the Scottish wars, and therein taken prisoner.

Young. *Satire 7*. To Sir Robert Walpole.

The odious word IMPRIMATUR has long since ceased to exist as a practical fetter upon English Literature; but the history of its use, abuse, and abolition is not a little curious, as furnishing an additional proof, if such were wanting, of the intolerance and despotism of the *soi-disans* Friends of Liberty. During the reign of Henry VII. Henry VIII. the control of the Press was absolutely submitted to the Royal will, and the prerogative was undisputed; so that the privilege of exclusively printing Bibles, Religious Books, and subsequently all others, was granted to individuals by Letters Patent. Under Mary these matters became subject to the jurisdiction of the Star Chamber; and by the Charter which she granted to the Company of Stationers, she entirely prohibited all Printing Presses but such as that Body should license. On the overthrow of the detestable Tribunal just mentioned, in 1641, it might have been hoped that this, one of its greatest usurpations, would have been buried in its ruins; but the Presbyterians had no sooner obtained power, than they manifested the imposture of their professions, by establishing a more grating tyranny than that which they affected to perceive in the Kingly Government. An Ordinance of the

Long Parliament, dated June 14, 1643, drew from the indignation of Milton the most fervent and eloquent of his Treatises. This Ordinance professes in the outset to protect the Stationers' Company. It then confines the printing of the Orders of Parliament to such persons as are appointed for the same; and continues that no "other Book, Pamphlet, Paper, nor part of any such Book, Pamphlet, or Paper, shall from henceforth be printed, bound, stitched, or put to sale by any person or persons whatsoever, unless the same be first approved of and licensed under the hands of such person or persons as both or either of the said Houses shall appoint for the licensing of the same." Unlicensed Presses and Books may be seized and destroyed. Authors and Printers of "scandalous and unlicensed" Books, (for they are classed together,) and all "other persons whatsoever employed in compiling, printing, stitching, binding, publishing, and dispersing them, may be apprehended and brought before either of the Houses or the Committee of Examinations, that so they may receive such further punishment as their offences shall merit, and not to be released until they have given satisfaction to the Parties employed in their apprehension for their pains and charges, and given sufficient caution not to offend in like sort for the future."

Another Ordinance, which appeared on September 28, 1647, exceeds the above in severity. "Ordained by the Lords and Commons in Parliament. That what Persons soever shall make, write, print, publish, sell, or utter, or cause to be made, printed, published, sold, or uttered, any Book, Pamphlet, Treatise, Ballad, Libell, Sheet, or Sheets of paper of News whatsoever, (except the same be licensed by both or either Houses of Parliament, or

such persons as shall be thereunto authorized by one or both Houses of Parliament, with the name of the Author, Printer, or Licenser,) shall for every offence suffer, pay, and incur the punishment, fine, or penalty following; viz. the maker, writer, or composer, shall pay for every such unlicensed Book, &c. 40s., or be imprisoned in the Common Gaol for 40 daies untill he pay the same. The Printer to forfeit 20s. and to suffer imprisonment, not exceeding 20 daies, till he pay the same, and to have his Presse and Implements of Printing seised and broken. The Book-seller to pay 10s., or to be imprisoned 10 daies till he pay the same. The Hawker, Pedlar, or Ballad-singer, to lose all his Books, Pamphlets, and to be whipt as a common Rogue in the Parish where the offender shall be apprehended or the offence committed."

Ordinance
1649.

Again an Ordinance of Sept. 20, 1649, advances these penalties on the Author to £10, the Printer to £5, and the Bookseller to £2, renders void all former Licenses, and requires that all Books, &c. before publication be "first approved and licensed under the hand of the Clerk of Parliament, or person authorized by the Councill of State, or under the hand of the *Secretary of the Army*, (a very singular officer to be chosen for such a purpose,) and be entred in their several Registers, and in the Register Book of the Company of Stationers." The Company of Stationers is empowered to appoint persons to search for and seize Presses at which unlicensed Books are printed. No unlicensed Printer, unless in the City of London and its liberties, and in the Universities, is permitted to use Printing implements, under a penalty of £20, the defacement of his materials, and being declared incapable of being hereafter a Master Printer or owner of a Press. This clause does not extend to the Press at York, nor that in Finsbury Fields, employed in printing Bibles and Psalms. Every Printer in London is to enter into a Bond, and to give sureties of £300 that he will not print any seditious, scandalous, treasonable, unlicensed, or unregistered Book. If he omits to prefix in the title the Author's name and place of residence at full length, he is liable to a penalty of £10 and the defacement of his materials for the first offence; for the second he is to be disabled from any more exercise of his trade of Printing. The same clause extends to the Universities and to York. Any one who lets premises for a Printing Office must first give notice to the Stationers' Company under a penalty of £5, and the Company must register such Office under a like penalty. So, too, similar notice, under like penalties, must be given of the importation or manufacture of any Printing materials. Unlicensed Books may be seized and burned or otherwise disposed of, at the pleasure of the Council. This Act was to continue in force for two years.

1652.

Accordingly, on the 1st January, 1652, it was renewed with additional clauses, by which the Council was empowered to limit the number of Printing Presses, by suppressing such as they thought fit, and determining what number of Presses and Apprentices every Master Printer should have at one time. The whole government of the mystery of Printing was finally vested in the Council.

Mr. Hallam, who gives an abstract of an equally obnoxious Act, which we shall soon have occasion to mention, passed soon after the Restoration, omits the details of these tyrannical Ordinances, and seems, in degree at least to find excuses for the spirit which gave

birth to them. "Every Government," he says, "however popular in name or origin, must have some uneasiness from the great mass of the multitude, some vicissitudes of Public opinion to apprehend, and experience shows that Republics, especially in a revolutionary season, shrink as instinctively, and sometimes as reasonably, from an open license of the tongue and pen, as the most jealous Court." (*Const. Hist.* ch. xiii.) We believe that they do so to a much greater extent; for their dependence upon popular opinion for support is far more entire than that of Monarchies, which are hedged in by innumerable other safeguards; so that the Freedom of the Press is much less compatible with the one form of Government than with the other.

Milton, in his *Areopagitica*, adopts a widely different opinion and a far higher tone than the modern writer just named. He maintains that "a State governed by the rules of Justice and fortitude, or a Church built and founded upon the rock of Faith and true knowledge, cannot be so pusillanimous" as to dread the most unlimited freedom of discussion. He shows that the Press was first shackled by Papal Tyranny, (it was Sixtus IV. who forged its earliest fetters,) and that the Inquisition completed the work: that "it is of greatest concernment in the Church and Commonwealth to have a vigilant eye how Books demean themselves as well as men. . . . for Books are not absolutely dead things, but do contain a progeny of life in them to be as active as that soul was whose progeny they are. . . . they are as lively, and as vigorously productive as those fabulous dragon's teeth, and being sown up and down may chance to spring up armed men." Nevertheless, great wariness is requisite as to that which we suppress, "as good almost kill a man, as kill a good book. . . . for a good book is the precious life-blood of a master spirit embalmed and treasured up on purpose to a life beyond life;" he who destroys it commits a homicide, "sometimes a martyrdom; and if it extend to a whole impression a kind of massacre, whereof the execution ends not in the slaying of an elemental life, but strikes at the æthereal and fifth essence, the breath of Reason itself; slays an immortality rather than a life."

He then exhibits what he terms a "quadruple exorcism;" an Imprimatur "approved and licensed under the hands of two or three glutton Friars."

"Let the Chancellor Cini be pleased to see if in this present Work be contained ought that may withstand the printing.

"Vincent Rabatta, Vicar of Florence."

"I have seen this present Work, and find nothing athwart the Catholic Faith and good manners; in witness whereof I have given, &c.

"Nicolo Cini, Chancellor of Florence."

"Attending the present relation it is allowed that this present Work of Davanzati may be printed.

"Vincent Rabatta," &c.

"It may be printed, July 15.

"Friar Simon Mompei d'Amelia, Chancellor of the Holy Office in Florence."

"Sometimes," he adds, "five Imprimaturs are seen together dialogue-wise in the piazza of one title-page, complimenting and ducking each to other with their shaven Reverences, whether the Author who stands by in perplexity at the foot of his Epistle shall to the Press or to the sponge." In a strain which we know not whether most to admire for the justness of its

IMPRIMA-
TUR.Milton's

IMPRIMA-
TUR.

argument or the magnificence of its diction, he shows the manifold evils of this vexatious restraint, the impossibility of its effecting good. "What advantage is it to be a man, over it is to be a boy at school, if we have only escaped the ferula to come under the fescue of an Imprimatur? If serious and elaborate writings, as if they were no more than the theme of a grammar-lad under his pedagogue, must not be uttered without the cursory eyes of a temporizing and extemporizing Licensor? . . . Truth and understanding are not such wares as to be monopolized and traded in by tickets, and statutes, and standards. We must not think to make a staple commodity of all the knowledge in the land, to mark and license it, like our broad-cloth and wool-packs." And then follows the unrivalled passage which we need not here cite, so well known and so often repeated, likening a noble and puissant nation to a strong man rousing himself after sleep, and shaking his "invincible locks;" to an "Eagle muing her mighty youth."

But the crabbed Puritans were dead to this generous and eloquent appeal. They were timorous and suspicious, so "as to fear each book and the shaking of every leaf;" and a Licensor was appointed. One of these, Gilbert Mabbot, (to his honour be it recorded,) perceived the inutility, the injustice, and the illegality of his office, and having presented a strong protest against it, was discharged from its hateful duties in 1649. (Symmons's *Life of Milton*, 220. from Birch's *Life*, 27.)

The *Areopagitica* has been often reprinted. Once in 1738 by Thomson, the author of the *Seasons*, who furnished a somewhat dull Preface. This edition appeared not long after an Act had been passed for subjecting all dramatic writings, before representation in a Theatre, to the inspection and License of the Lord Chamberlain of the Royal Household; and there can be no doubt that Thomson undertook the task in consequence of public attention being attracted by that Statute. In 1772 some apprehension seems to have been entertained of a restrictive Act upon the Press, and the *Areopagitica* was re-published with a violent and ill-written Preface, which some have ascribed to Archdeacon Blackburne; the Archdeacon certainly reprinted it at the end of his *Remarks on Johnson's Life of Milton*. The great Poet's Treatise may be found in Baron Maseres's Tracts; it was again printed in 1792 by Mr. Losh; and lastly, with a ponderous and most disproportionate apparatus of Notes, Prefatory Remarks, Cursory Observations, and Excursive Illustrations, by Mr. Holt White in 1819. Mirabeau, in 1788, imitated, or rather translated, it in a Tract *Sur la Liberté de la Presse*.

After the Restoration, a Bill for the regulation of the Press was passed through both Houses in 1661; but on its return to the Commons with amendments, it was thrown out, because the Peers had inserted a clause exempting their own houses from search. Blackstone in a note (book iv. ch. ii. p. 152) says, that the Ordinances of the Long Parliament, which we have cited above, were principally founded on a Star Chamber decree of 1637, and that the Act of Parliament, which we are about to mention, was copied, with some few alterations, from these Ordinances. The very words of the above-named Act in most parts are, in fact, a transcript of the Star Chamber decree, which directs its thunder against "secret printing in corners without license;" and alludes, among other Ordinances, to one of the 28th of Elizabeth, which had been found to be

defective in many particulars. This decree of 1637, besides being printed separately, is given by Rushworth (*Hist. Coll.* iii. 306. *Appendix*) and by Hollis. (*Memoirs*, 64.) Lord Erskine, in his Speech in defence of Tom Paine, slightly alludes to Cromwell's restraint of the Press, and adds, that at the Restoration the Star Chamber decree was worked up into an Act of Parliament. The odium of adopting this decree, in fact, belongs equally to the Commonwealth and the restored Monarch; but it was the former which set the ill example. The Act under the latter (14 Charles II. c. 33.) prohibits the printing of Books without entry in the Register of the Stationers' Company; appoints the Lord Chancellor, the Lord Keeper, the Chief Justices, and the Chief Baron, or one or more of them, or their substitutes, Licensers for Books of Common Law. The Secretaries of State, or their substitutes, for Books of History and Politics; the Earl Marshal for Books of Heraldry, or, in case there should not be an Earl Marshal, the three Kings of Arms, or any two of them, provided Garter be one; the Archbishop of Canterbury and the Bishop of London, or either of them, or their substitutes, for Divinity, Physic, Philosophy, "or whatever other Science or Art;"* and, in the Universities only, for the last-named subjects, the Chancellors or Vice Chancellors. No Books are to be imported, except into the Port of London, without License from the Archbishop or the Bishop of London; and even in that Port every packet of Books is to be opened in the presence of some scholar or learned man appointed by the Licensers, and one or more of the Company of Stationers. Any dangerous or offensive Books must be brought to the Archbishop or Bishop, and the Importers must be proceeded against. Printers are to annex their names to Books, upon pain of forfeiture of all Books without them, and the defacement of all their Printing materials. No English Books printed beyond the Seas may be imported upon pain of forfeiture. Clauses are then inserted for regulating the Registry of Presses, the number of Master Printers, who were not to exceed twenty, their Presses and Apprentices; for reserving three copies of every printed Book, one for the King's Library, and one for each University; and a few others of little importance. This Bill contains also the clause for exempting Peers' houses from search, which had before occasioned its rejection. It was to continue in force for two years; accordingly it was renewed by 16 Charles II. c. 8., by 16-17 Charles II. c. 7., and by 17 Charles II. c. 4. In 1679 it expired; but at a less happy season, in 1685, it was renewed for seven years. (1 James II. c. 17. sec. 5.) Even subsequent to the Revolution, in 1692, it was continued till the end of the Session of the following year, (4 William and Mary, c. 24. sec. 14.) Three times afterwards, in February

* The words of the Statute stand as we have cited them above, and thus unfortunately destroy a witticism, founded on misquotation, and repeated with applause by Mr. Holt White. "Under the Licensing Act of the 13th and 14th of Charles II. c. 33. all Novels, Romances, and *Fairy Tales*, and all Books on Philosophy, Mathematics, Physic, Divinity, or *Love*, were to be licensed by the Archbishop of Canterbury or by the Bishop of London. 1694, in April 1695, and in April 1697, attempts were made to frame similar Bills. The last, presented by Mr. Pulteney, was thrown out before a second reading. It gave rise to a Pamphlet, *A Letter to a Member of Parliament, &c.* scarcely worth preservation, and in no-wise differing from numerous similar productions from time to time, but which has been reprinted in the *Appendix* (xiii.) to the Vth volume of the *Parliamentary History*. Each of these Bills was rejected, and the Freedom of the English Press may be considered to date from 1694. Sir Roger L'Estrange was the pitiable wight upon whom much of the task of perusal before License devolved during the greatest part of the period of control. In the year 1663 he published a vehemently restrictive Tract, *Considerations and Proposals in order to the Regulation of the Press, together with diverse instances of treasonous and seditious Pamphlets proving the necessity of the same*. In the close of this little Treatise he enumerates the Penalties, offences, and delinquents connected with Literature. The penalties are "Death, mutilation, imprisonment, banishment, corporal peyns, disgrace, and pecuniary mulcts;" the offences, "Blasphemy, Heresie, Schism, Treason, Sedition, Scandal, and contempt of authority;" the delinquents, "Advisers, authors, compilers, writers, printers, correctors, stitchers, binders, publishers, dispersers, and concealers of unlawful Books in general; Stationers, Posts, Hackney-Coachmen, Carriers, Boatmen, Mariners, Hawkers, Mercury-women, Pedlers, and Ballad-singers, so offending, in particular." Penalties of disgrace are, "Pillory, stocks, whipping, carting, stigmatizing, disablement to bear office or testimony; publique recantation, standing under the Gallows with a rope about the neck at a publique execution; disfranchisement, (if freemen,) cashiering, (if souldiers,) degrading, (if persons of condition,) wearing some badge of infamy, condemnation to work either in mines, plantations, or houses of correction." All these fierce visitations are for Authors, for whom "nothing can be too severe, *that stands with humanity and conscience*." As for Printers and Stationers, in addition to such other punishments as the wisdom of the Magistrates may think fit to inflict, "they may be condemn'd to wear some visible badge or marque of ignominy, as a halter instead of a hatband, one stocking blew and another red, a blew bonnet with a red T or S upon it, to denote the crime to be either Treason or Sedition."

Thomas
Tomkyns.

These wise, lenient, and equitable proposals, no doubt mainly contributed to the sovereignty in which, for so many years, L'Estrange was established over the Realms of Wit. But it is never to be forgotten that it was the vigilant eye not of the good Knight, but of Thomas Tomkyns, one of Archbishop Sheldon's Chaplains, which suspected Treason in that noble simile in the 1st Book of *The Paradise Lost*, (594.) in which the Sun when in eclipse

with fear of change
Perplexes Monarchs.

Dr. Symmons, in his *Life of Milton*, (459.) has very amusingly pointed out the various allusions which may be supposed to have directed the judgment of this sagacious Licensor. Lord Erskine, also, in his Speech at the Bar of the House of Commons in 1779, in behalf

of Thomas Cowan, (a Speech which overthrew the monopoly of Almanacs by the Universities,) has rapidly glanced over the above History of Licensing, and exposed its follies and its evils with much wit and ability.

Beckmann (*Hist. of Inv.* iii. 93.) has collected some curious particulars relative to Book-censors. He shows that jealousy of publication on the part of Governments is by no means of modern origin; for that Books were committed to the flames many centuries before the invention of Printing. Thus the Works of Protagoras were burned by the common crier at Athens, and those of Numa at Rome. We need not cite examples to prove how common this practice became afterwards, both among Pagans and Christians. Instances are also to be found in much later days, yet still before the discovery of Letter Press, in which Authors voluntarily submitted their productions to the judgment of their superiors, before they dismissed them for public inspection. Ambrosius Autpert, a Benedictine Monk, A. D. 768, sent an Exposition of the *Revelations* to Pope Stephen III. for this purpose. He represents himself to be the first writer who has done so; affirms the general Liberty of the Pen, and expresses a hope that his freedom will not be curtailed, by the act of respect which of his own accord he has been induced to pay.

The first Book published with a License after the invention of Printing has been supposed to be a Tract *Nosce te ipsum*, which appeared at Heidelberg in 1480; but there are two others yet earlier at Cologne, both in 1479, one *Wilhelmi Episcopi Lugdunensis, Summa de virtutibus*, the other a *Bible*. In 1501, Alexander VI. promulgated a Bull, enjoining a previous License for Books, under pain of fine and excommunication; and in Roman Catholic Countries this odious authority has ever since been retained more or less in the hands of the Priests. For these and other facts, Beckmann gives ample authorities. He corrects a mistake into which Anderson has fallen respecting *exclusive* Printing in England. That writer says, that the first Patent granted for this purpose was in 1590. Beckmann shows one eighty years earlier; *The History of King Boccus, printed at London by Thomas Godfrey, cum privilegio Regali*, 1510; and numerous others before the date assigned by Anderson.

The extent to which the tyranny of Licensing was (perhaps still is) carried in Spain, is thus described in the middle of the last century. "A Book in Spain must pass through six Courts before it is published. 1. it is examined by the *Examinador Synodal* of the Archbishoprick, commissioned by the *Vicario*; 2. it goes to the Recorder of the Kingdom where it is to be published, *Chronista de Castilla, Arragon, Valencia, &c.*; 3. if approved by them it is licensed by the *Vicario* himself, attested by a *Notario*; 4. the privilege must be had from his Majesty, and a Secretary countersigns it; 5. after it is printed it goes to the Corrector General *por su Magestad*, who compares it with the Licensed copy, lest any thing be inserted or altered; and 6. the Lords of the Council tax it at so much a sheet. In Portugal a Book has seven reviews to pass before publication." Blackwell, *Enquiry into the Life and Writings of Homer*, p. 63.

IM-PROPRIATIONS. Spelman, who has inveighed with great vehemence against the tenure of IMPROPRIATIONS, very carefully distinguishes them (as Skinner has done) from APPROPRIATIONS, with which they are usually identified. After showing in what manner Religious Bodies obtained a perpetual incumbency on Benefices, he adds, "in old times, whilst these churches were in the Clergy-hand, they were called *Appropriations*, because they were *appropriate* to a particular succession of Churchmen; now they are called *Impropriations*, for they are *improperly* in the hands of Laymen." (*Larger Work of Tythes*, c. 20.) Minshew, in like manner, observes, that Impropriations are "when Spiritual Livings come to Temporall men, as *improper* to them." Mr. Coleridge upon Blackstone, (I. 2.) remarks, that "in a note upon the term *Improprie*, to be found in 1 Haggard's Rep. 162. *Duke of Portland v. Bingham*, several instances are given of its being used synonymously with *Appropriate*, not only since but before the dissolution of the Religious Houses."

Blackstone's account of them. It is scarcely possible to abridge the language of Blackstone (*loc. cit.*) without rendering his meaning less distinct; and we prefer therefore to give in his own words, rather than in our own, his very clear and lucid account of the origin and nature of Impropriations. "Benefices," he says, "are sometimes *appropriated*; that is to say, the Benefice is perpetually annexed to some spiritual Corporation, either sole or aggregate, being the patron of the Living; which the Law esteems equally capable of providing for the service of the church, as any single private clergyman. This contrivance seems to have sprung from the policy of the Monastic Orders, who have never been deficient in subtle inventions for the increase of their own power and emoluments. At the first establishment of Parochial clergy, the tithes of the Parish were distributed in a fourfold division; one for the use of the Bishop, another for maintaining the fabric of the church, a third for the poor, and the fourth to provide for the incumbent. When the sees of the Bishops became otherwise amply endowed, they were prohibited from demanding their usual share of these tithes, and the division was into three parts only. And hence it was inferred by the Monasteries, that a small part was sufficient for the officiating priest; and that the remainder might well be applied to the use of their own fraternities, (the endowment of which was construed to be a work of the most exalted piety,) subject to the burthen of repairing the church, and providing for its constant supply. And therefore they begged and bought, for masses and obits, and sometimes even for money, all the advowsons within their reach, and then appropriated the Benefices to the use of their own Corporation. But, in order to complete such appropriation effectually, the King's licence, and consent of the Bishop, must first be obtained: because both the King and the Bishop may some time or other have an interest, by lapse, in the presentation to the Benefice; which can never happen if it be appropriated to the use of a Corporation, which never dies: and also because the Law reposes a confidence in them, that they will not consent to any thing that shall be to the prejudice of the Church. The consent of the patron also is necessarily implied: because (as was before observed) the appropriation can be originally made to none, but to such Spiritual Corporation, as is also the patron of the church; the whole being indeed nothing else but an allowance for the

patrons to retain the tithes and glebe in their own hands, without presenting any clerk, they themselves undertaking to provide for the service of the church. When the appropriation is thus made, the appropriators and their successors are perpetual parsons of the church; and must sue and be sued, in all matters concerning the rights of the church, by the name of parsons.

"This appropriation may be severed, and the church become disappropriate, two ways; as, first, if the patron or appropriator presents a clerk, who is instituted and inducted to the parsonage: for the incumbent so instituted and inducted is to all intents and purposes complete parson: and the appropriation, being once severed, can never be reunited again, unless by a repetition of the same solemnities. And, when the clerk so presented is distinct from the vicar, the rectory thus vested in him becomes what is called a *sinecure*; because he hath no cure of souls, having a vicar under him to whom that cure is committed. Also, if the Corporation which has the appropriation is dissolved, the parsonage becomes disappropriate at Common law; because the perpetuity of person is gone, which is necessary to support the appropriation.

"In this manner, and subject to these conditions, may appropriations be made at this day:* and thus were most, if not all, of the appropriations at present existing originally made: being annexed to Bishopricks, Prebends, Religious Houses, nay even to Nunneries and certain Military Orders, all of which were Spiritual Corporations. At the dissolution of Monasteries by statutes 27 Hen. VIII. c. 28. and 31 Hen. VIII. c. 13., the appropriations of the several parsonages, which belonged to those respective Religious houses, (amounting to more than one-third of all the Parishes in England,) would have been by the rules of the Common law disappropriated, had not a clause in those statutes intervened, to give them to the King in as ample a manner as the Abbots, &c. formerly held the same, at the time of their dissolution. This, though perhaps scarcely defensible, was not without example; for the same was done in former reigns, when the alien Priories (that is, such as were filled by foreigners only) were dissolved and given to the Crown. And from these two roots have sprung all the lay appropriations of secular parsonages which we now see in the Kingdom; they having been afterwards granted out from time to time by the Crown.

"These appropriating Corporations, or Religious Houses, were wont to depute one of their own Body to perform divine service, and administer the sacraments, in those Parishes of which the Society was thus the parson. This officiating minister was in reality no more than a curate, deputy, or vicergerent of the appropriator, and therefore called *vicarius* or *vicar*. His stipend was at the discretion of the appropriator, who was however bound of common right to find somebody, *qui illi de temporalibus, Episcopo de spiritualibus, debeat respondere*. But this was done in so scandalous a manner, and the Parishes suffered so much by the neglect of the appropriators, that the legislature was forced to inter-

* "The truth of this position has been questioned, and the doubt is not likely to be solved by any judicial decision. But I am not aware of any principle which should prevent an appropriation from being now legally made, supposing the Spiritual Corporation already seised of the advowson of the church, or enabled to take it by grant. The power of the King and the Bishop remain undiminished."

pose; and accordingly it is enacted by statute 15 Rich. II. c. 6., that in all appropriations of churches, the diocesan Bishop shall ordain (in proportion to the value of the church) a competent sum to be distributed among the poor parishioners annually; and that the vicarage shall be *sufficiently* endowed. It seems the Parishes were frequently sufferers, not only by the want of divine service, but also by withholding those alms for which, among other purposes, the payment of tithes was originally imposed; and therefore in this Act a pension is directed to be distributed among the poor parochians, as well as a sufficient stipend to the vicar. But he, being liable to be removed at the pleasure of the appropriator, was not likely to insist too rigidly on the legal sufficiency of the stipend; and therefore by statute 4 Hen. IV. c. 12. it is ordained, that the vicar shall be a secular person, not a member of any Religious House; that he shall be vicar perpetual, not removable at the caprice of the Monastery; and that he shall be canonically instituted and inducted, and be sufficiently endowed, at the discretion of the Ordinary, for these three express purposes, to do divine service, to inform the people, and to keep hospitality. The endowments, in consequence of these statutes, have usually been by a portion of the glebe or land belonging to the parsonage, and a particular share of the tithes which the appropriators found it most troublesome to collect, and which are therefore generally called privy or small tithes; the greater, or predial tithes being still reserved to their own use. But one and the same rule was not observed in the endowment of all vicarages. Hence some are more liberally, and some more scantily, endowed: and hence, the tithes of many things, as wood in particular, are in some parishes rectorial, and in some vicarial tithes.

"The distinction therefore of a parson and vicar is this: the parson has, for the most part, the whole right to all the Ecclesiastical dues in his Parish; but a vicar has generally an appropriator over him, entitled to the best part of the profits, to whom he is in effect perpetual curate, with a standing salary. Though in some places the vicarage has been considerably augmented by a large share of the great tithes; which augmentations were greatly assisted by the statute 29 Car. II. c. 8. enacted in favour of poor vicars and curates, which rendered such temporary augmentations (when made by the appropriators) perpetual."

Spelman's
opinion.

Spelman (*ut supra*) lays down as principles—1. That, after the appropriation, the Parsonage still continueth spiritual, a position not likely to be disputed; and 2. That no man properly is capable of an appropriation but spiritual men, a doctrine which, however just in itself, will not meet equally ready admission. It was the Dissolution, he says, that twilight of both Religions, which first violated the holy marriage of spiritual things

* "In the case of the *Duke of Portland v. Bingham*, 1 Haggard's Rep. 157., Sir W. Scott, after observing that the term 'appropriation' is almost entirely confined to the English Church and English Canon law, says, that there were two kinds of it, the one *pleno jure, sive utroque jure tam in spiritualibus, quam in temporalibus*; the other *in temporalibus* only, the want of distinguishing between which had led to great confusion. In the first, that in which both the spiritual and temporal interests of the Church were annexed to the house, it had the cure of souls, and performed the duties by its own members or merely stipendiary curates, from whence probably sprang the perpetual curacies of the present day. In the second kind, the cure of souls resided in an endowed perpetual vicar, who was instituted by the Bishop."

and spiritual men, which are correlatives and cannot in reason be divorced: but the Dissolution, "like Abimelech, (*Gen. xx. 2.*) took the wife from the husband, and made laymen, which before were the children of the Church, now become spiritual fathers." He then proceeds to affirm on Scriptural arguments that the King had not lawfully the power which he then exercised of seizing God's portion to himself and diverting it from its rightful possession to other channels. The consequence which he deduces follows very naturally, if his premisses be once granted. "It appears how unjust it is to tolerate appropriations, and how miserable their condition is who hold them. O, how lamentable is the case of a poor appropriatory, that, dying, thinketh of no account but of that touching his Lay-vocation! and then coming before the Judgment-seat of Almighty God, must answer also for the spiritual function; first why he meddled with it not being called unto it; then why (meddling with it) he did not the duty that belongeth unto it, in seeing the Church carefully served, the Minister thereof sufficiently maintained, and the Poor of the Parish faithfully relieved... Look how many of the Parishioners are cast away for want of teaching; he is guilty of their blood; at his hand it shall be required, because he hath taken upon him the charge... It is not, therefore, a work of bounty or benevolence to restore these appropriations to the Churches, but of duty and necessity so to do. It is a work of duty to give that unto God that is God's, (*Matt. xxii. 21.*) and a work of necessity towards the obtaining remission of these sins." (145.)

In another place, *De non Temerandis Ecclesiis*, he has adopted a similar line of argument, and his son, Clement Spelman, in a Preface to that Tract, has given a series of fearful examples from English History, occupying seven folio pages, of the "insuccess" of sacrilegious persons who have rioted upon the plunder of the Church, and fed themselves with "oblations and tythes, the fat of Impropropriations." The instances, no doubt, are remarkable, and the well-meaning writer sums them up with a pithy address to his reader. "Do thou, and let every man observe, how often Impropropriations and Religious Houses in a short time change and shift their owners, like the Ark not resting with the men of Ashdod, Gath, nor Eckron, but wearies them out with Emrods and Mice, curses upon their persons and estates; but returned to Bethshemeth and Kiriathjearim, to its own place, to the Priest and Levite, not only Obed Edom, but even all Israel is blessed." We fear this remonstrance has not often, of late, met with any very practical application. But it was not wholly unsuccessful. In Spelman's *Life* it is mentioned that several gentlemen were induced by reading this Work to restore their Impropropriations to the Church; and in Camden's *Britannia* (*Ed. 1695, p. 724.*) we are told, "Scarce two miles from Arksey, in the West-riding of Yorkshire, lies Adwick in the Street, memorable on this account, that Mrs. Ann Savill, (a virgin benefactress yet living,) daughter of John Savill, of Medly, Esq., purchased the Rectory thereof, for which she gave 900*l.*, and has settled it in the hands of Trustees for the use of the Church for ever; and this from a generous and pious principle, upon the reading of Sir Henry Spelman's noted Treatise *De non Temerandis Ecclesiis.*" But a fuller account of these matters is given by Jeremiah Stephens, who edited the *Larger Work on Tythes*, in his Preface; and it is but a tribute due to the memory of the excellent

 gave the perpetual advowson of a good Impropriation

 end restored three Impropriations to the Church, and
 other gentlemen of Norfolk are said to have acted
 similarly. Sir William Dodington of Hampshire sur-
 rendered six Impropriations to the full value of 600*l.* a
 year and more. Richard Knightley, Esq. of Northamp-
 tonshire gave up Fausley and Preston Baptist. Lord
 Hicks, Viscount Campden, restored one in Pembroke-
 shire, which cost 460*l.*, one in Northumberland 760*l.*,
 one in Durham 366*l.*, another in Dorsetshire 760*l.*:
 he redeemed Chantry lands for 240*l.*, and gave pensions
 and left legacies to several Ministers. Mrs. Ellen
 Goulston annexed the Impropriation of Bardwell in
 Suffolk to the Vicarage, and then gave the advowson to
 St. John's College, Oxford. Besides these, "while Sir
 Henry Spelman lived, there came some unto him
 almost every Term in London, to consult with him how
 they might legally restore and dispose of their Impro-
 priations to the benefit of the Church; to whom he gave
 advice, as he was best able, according to their particular

cases and inquiries; and there wanted not others that
 thanked him for his Book, promising that they would
 never purchase any such appropriate Parsonages to
 augment their Estates."

Selden, as may be imagined, considers the subject
 very differently; in his *History of Tythes* (*Works*, vol.
 iii. 1227.) he gives an account of the nature of appro-
 priations, and afterwards, in the *Review* of that Work,
 (1322.) he makes their existence an argument against
 the origin of tythes, *jure divino morali*.

Perhaps no plainer example can be offered of one
 among the many abuses to which Impropriations have
 given rise, than a fact stated in the title-page of Spel-
 man's Tract before mentioned, *De non Temerandis*
Ecclesiis, that it was written "for the sake of a Gentle-
 man, who, having an appropriate Parsonage, employed
 the Church to prophane uses, and left the Parishioners
 uncertainly provided of Divine Service in a Parish there
 adjoining." The whole subject of Impropriations is
 treated very copiously and with great learning by White
 Kennett (afterwards Bishop of Peterborough) in his *Case*
of Impropriations, 1704. And there is a curious list
 of *Impropriations purchased* by means of *compositions*
with Delinquents, which shows the sums extorted, from
 1640 to 1648, by the Long Parliament, for *augmenta-*
tion of the maintenance of Preaching Ministers.

Approve and improve, approve-
 ment and improvement, are used
 in our old Law as respectively
 equivalent. By Statute of Mer-
 ton (see in Rastall) the great

men of England, leaving sufficient pasture, are allowed
 to make the profit or *approvement* of the residue, &c.
 and lords of waste woods and pastures are allowed to
improve the said woods, &c. or make *improvement* of
 them; the tenants having sufficient pasture to their
 hold. Hence Skinner derives the verb from the Lat.
in, and *probus*; *q. d. probum seu bonum facere vel fieri*,
 to make or become useful or good. But an *approver*,

IMPROVE. or a *prover*, *probat*or, is in Law also;—one, who being indicted of treason or felony, and arraigned for the same, doth confess the fact before plea pleaded, and appeals or accuses others his accomplices in the same crime, in order to obtain his pardon. Such *approval*, Blackstone adds, can only be in capital offences. And it is not at all probable that these words differ in any thing except their application: in the latter usage, to *approve* is simply to *prove* or make *proof* of; in the former, to make *proof* or trial of, to make experiment upon; and, consequentially,

To meliorate, to better, to correct, to amend; to enhance, to increase.

IMPROVISATORE.

IMPROVISATORE, a name attributed by the Italians to one who composes and recites extempore verses on a given subject. The talent, perhaps, has existed, more or less, in all Countries, and at all times; (for Homer has been considered as an Improvisatore, and the American Savages during their festivals chant extempore songs to their barbaric music;) but the name is more peculiarly restricted to Italy, where the language, from its great flexibility, affords unusual facilities for impromptu versification. Without inquiring, therefore, into matters of lesser and obscurer note, we

shall confine ourselves to a few particulars of the most celebrated Improvisatori who have distinguished themselves within the pale of the Alps.

Crescimbeni, in his *Commentarij all' Istoria della volgare Poesia*, (vol. i. l. iii. 12.) expresses an opinion, that the power of Improvising in Italian was coeval with the Poetry of that language; nevertheless, that no memorials of it are preserved anterior to the XVth century. The metre at that time is believed to have been on all occasions the *ottava rima*. He then mentions some of the names which we are about to notice;

and adds, somewhat whimsically, that in his own days the Art had attained far higher value than it held in former times, not only because it had been limited by Rules of much greater strictness, but because it had become a fashion to Improvvisare in Prose, on matters of deep learning and Science. Thus it seems, *il glorioso Principe Cardinal Pietro Ottoboni, Vicecancelliere di Santa Chiesa, il cui ingegno e la cui prontezza è mirabile in ogni cosa, e particolarmente nelle materie letterarie*, had established a Monday evening *Conversazione*, in which *eruditi discorsi, poesie d'ogni genere*, accompanied and unaccompanied, *poemetti d'ottave capitolì, catene di sonetti, di canzoni, di canzonette* were Improvvised for six hours together with the utmost *prontezza, vivacità, scellezza, e felicità* by all the company; but, as might reasonably be expected from a Prince, a Cardinal, and a Vice-Chancellor, *sopra il tutto era la nobiltà, robustezza, fecondità, e grazia di chi lor presideva*. In the end this *maraviglioso istituto* of chattering charlatans formed itself into an *Accademia*, under the direction of Corelli as master-fiddler.

Serafino
d'Aquila
and Bernar-
do Accolti.

Among the earliest names which we find recorded, occur those of Serafino d'Aquila and Bernardo Accolti, both of whom flourished at the close of the XVth century. Of the latter, Paolo Cortese, a contemporary, who from the refinement of his own style most probably was a fastidious Critic respecting that of others, has pronounced a judgment which may be received as conclusive of his great merit. *Bernardus Accoltus, qui quanquam versus extempore dicat, ita tamen aptis sententiis verba concinnè jungit, ut cum celeritati semper parata sit venia, magis in eo sunt laudanda quæ fundat, quam ignoscendum quod ex tempore et partu repentino dicat. (de Cardinalatu.)* Accolti, who was born at Arezzo, was distinguished as *l'unico Aretino*; and one of the most pleasing traits in his character is exhibited in the affection which he cherished for Serafino, who emulated him in his peculiar course without any of the bitterness of rivalry. Mazzuchelli (*ad Aquila*) has preserved an Epitaph, which Accolti is said to have engraved on the tomb of his friend in *Sta. Maria del Popolo*, but which does not exist there at present.

*Qui giace Serafin: partirti or puoi:
Sol d'aver visto il sasso che lo serra
Assai sei debitore agli occhi tuoi.*

Nor was Accolti himself without his poetical eulogists. The following lines, addressed to him by Grammatico Toscano, are sufficiently elegant to deserve transcription:

*Carmina quæ subito tibi sunt effusa calore,
Vel quæ sunt limâ saepe polita tuâ,
Qui legit, haud cernit quid differat impetus arte,
Et procusa pari cuncta labore putat.
Atque ait, "hæc si est ars, nihil hæc est cultius arte,
Si furor, est ars hoc culta furore minus."*

Serafino is said by Tiraboschi (iii. 3. 10.) to have balanced even the fame of Petrarch. He was an admirable musician, and his verses owed no small portion of their celebrity to the skill wherewith they were accompanied. We are told that during the recitations of Accolti in Rome the shops were shut, all business was suspended, guards were placed at the doors, and long and loud acclamations from the most learned and illustrious Prelates and Scholars repaid his exertions. He is commended in high terms by Cardinal Bembo. Ariosto speaks of him as a person of consideration during his own time at the Court of Urbino; and Leo X. honoured him

VOL. XXIII.

with the post of Apostolic Secretary. His Poems, including a Comedy, *Virginia*, named after his natural daughter, have been often reprinted, and a favourable estimate of his powers may reasonably be founded on them.

IMPROV-
VISA-
TORE.

Aurelio Brandolini, who died of the plague at Rome in 1497, was blind or nearly so, and in consequence is known as *il lippo*, a name which, by a Latinized *erratum* in one of the editions of Moreri, has been whimsically transformed into *Lupus*. He was a Florentine, and at first taught Oratory at Buda, under the patronage of Matthias Corvinus, King of Hungary. Bosso, (*Ep. Fam.* ii. 75.) his contemporary, compares him to Plato and Aristotle, and to a third, who might be surprised at finding himself in such company, Theophrastus; and we believe it is to the same writer that we are indebted for the relation of a marvel, which, provided it be true, does more credit to the retentive memory than to the poetical taste of his Hero; namely, that he one day Improvvised all the subjects in the XXXVII Books of Pliny's *Natural History*, without the omission of a single important particular. How would an English ear tolerate the excellent Philemon Holland, to whom our pages are so often indebted, if clothed in the embroidery of rhyme! The printed Works of Brandolini are chiefly on Moral and Religious subjects, for he was a Preacher as well as a Poet, and an Augustin Friar to boot. Two of his brothers, Cristoforo and Raffaele, partook both of his Poetical talents and of his defect in sight.

The Bran-
dolini.

Besides these, Giammario Filelfo, who preceded them some few years in time, (the son of Francesco, who is known to Literature by better things than his extempore verses,) is classed among the Improvvisatori, and of his promptitude we read as follows in Tiraboschi. *Ne dæe tacersi un raro pregio di questo scrittore, di cui ci ha lasciato memoria Giglio Gregorio Giraldis, il qual dice di averlo udito da Ciro, fratello di Giammario: cioè che trovandosi egli talvolta in un consesso di ben cento persone, e venendogli da ciascheduno proposto un argomento su cui verseggiare, egli rispondeva a tutti sul campo, con quell'ordine stesso con cui era stato interrogato. (iii. 5. 27.)* He died in 1480, one year before his father.

Giammario
Filelfo.

Nicolo Leonicensi, a Physician, born at Lunigo, (*Leonicum*), relieved his graver studies, and amused his leisure, during a protracted life of ninety-six years, by cultivating this talent. It is probable that he would not have harmonized with Brandolini, for one of his Works which is left to us is an attack upon Pliny. *Plinii et aliorum plurium auctorum qui de simplicibus medicaminibus scripserunt errores notati.* He died in 1534. The Strozzi of Ferrara, celebrated in so many of their branches, are numbered in some of them among the Improvvisatori, and if we were content to transcribe a barren list of names, our catalogue might be very largely increased: among them must not be forgotten that of the great Architect Bramante. (Tiraboschi, iii. 8. 6.)

Nicolo

The Strozzi.

Bramante.

The magnificent Patronage extended to men of Letters by Leo X. attracted some of the above named and many others to his Court, and gave birth to a class of Poets, who Improvvised not in the *lingua volgare*, but in Latin. Among these the chief place seems accorded by the general voice to Andrea Marone, concerning whom many particulars may be found in Paulus Jovius, (*Elog. Doct. vir.*) Giraldis, (100.) and Valerianus. (*de Liter. infel.* 26.) He was a native of Brescia, and notwithstanding his great powers he profited but little by

them. A small benefice in Capua was his sole reward, and this he owed to the bounty of the Pope, in return for a splendid public exhibition of his genius at a solemn banquet given to some ambassadors, at which he delivered a long extempore Latin Poem on a Crusade which was proposed against the Turks. Leo also gave him apartments in the Vatican, from which his detestable successor, who considered Poets as so many noxious vermin, expelled him. He was reinstated by the better taste of Clement VII., but on the sack of Rome in 1527, he lost all his little property—*perdidit infelix totum nihil*—and what to one of his habits and pursuits was of infinitely deeper moment, his MSS. After a short retirement to Capua he returned to the devoted City, and commenced an ineffectual search for them. The bitterness of this disappointment preyed upon his mind, and soon afterwards he died miserably in a wretched hovel, neglected, forgotten, and broken-hearted. Tiraboschi has given the following picture of his manner of Improvvising, which is almost literally translated from Paulus Jovius. *Al suono della viola ch' egli stesso toccava, cominciava a verseggiare, e quanto più avanzavasi, tanto più pareva crescergli la facondia, la facilità, l'estro, e l'eleganza. Lo scintillar degli occhi, il sudore che gli piovea dal volto, il gonfiarsegli delle vene, facea fede del fuoco che internamente lo ardeva, e teneva sospesi e attoniti gli uditori, a quali sembrava che il Marone dicesse cose da lungo tempo premeditate.* (iii. 4. 9.)

Camillo
Querno.

But the festive hours of Leo X. were not always dedicated to such elegant relaxation as Marone afforded. His Court, as is well known, was thronged with buffoons, the chief of whom was Camillo Querno; a wag who, in many particulars, has often been confounded with some of his fellows. His History is thus told by Tiraboschi, again borrowing from Paulus Jovius. Querno brought to Rome a Poem, the *Alexias*, consisting of 20,000 verses, *e presentatossi agli Accademiche colla Improvisatrice sua cetra; essi al vederlo pingue in volto e ben zazzaruto, pensarono ch' ei fosse opportuno a farne una piacevole scena. Raccollisi dunque a un solenne convito in un' Isoletta del Tevere, sacra già ad Esculapio, ivi mentre il Querno mostravasi valoroso egualmente nel poetar che nel bere, gli poser lietamente sul capo una corona di nuovo genere, tessuta di pampini, di cavoli, e di alloro, e con replicate viva lo acclamavano Arcipoeta.* (iii. 4. 11.) Not long afterwards he was presented to Leo, and soon became the favourite companion of the Holy Father's lighter moments. He was allowed to pick choice morsels from the Pontifical dish, and even to taste of the same cup; under this condition, that each draught was to be purchased by a Latin distich, and that the wine was to be *longè dilutissimum*, provided the lines were bad. Querno, as may readily be supposed, under this hard bargain sacrificed much more frequently to the Nymphs than to Bacchus. Had he always poured forth such verses as are recorded in the following Leonine couplet, he would have deserved a better fate; but it should be remembered, that the subject of them was one which deeply occupied his thoughts, and doubtless filled him with more than ordinary inspiration. It was after quaffing a potation of unusual tenuity, that he addressed the Pontiff,

*In cratere meo Thetis est conjuncta Lyæo;
Est Dea juncta Deo, sed Dea major eo.*

A mock combat of wit between Leo and his zany is

brought forward whenever the name of Querno is mentioned, and though most readers, probably, have often encountered it elsewhere, it must not be omitted here. The Bard, perhaps being dry, commenced with the line below:

Archipoeta facit versus pro mille Poetis,

a hint which the Pope dexterously parried, by replying after Querno's own manner,

Et pro mille aliis Archipoeta bibit.

Thus far there is only simple affirmation on either side, and each, we doubt not, equally in accordance with fact; but Leo has the most point. Paulus Jovius, who relates the anecdote, says, that Querno, somewhat startled, yet not abashed, at the Pontiff's quickness—*stupens at interritus*—rejoined with a more direct approach to the object of his desire,

Porrige, quod faciat mihi carmina docta, Falernum,

and that Leo finished the battle, and *floored* his antagonist, by a double allusion to the effects of wine both on his bodily and his mental feet, the one lame from the gout, the other from inebriety,

Hoc etiam enervat debilitatque pedes.

The fate of Querno was not less wretched than that of the more refined Marone. On the death of Leo his favour declined, and of the new possessors of the Vatican he remarked, not without humour, that he had exchanged *pro uno benigno Leone multos feros Lupos*. The invasion of the Constable Bourbon and the assault of Rome drove him into exile to Naples; there, disease forced him to an hospital, and in a paroxysm of despair, perhaps of delirium, he tore open his own bowels, and destroyed himself with a pair of scissors. A Poem from his pen, with which we have not happened to meet, and which most likely would not repay the trouble of searching for it, *sulla guerra di Napoli*, was printed at that city in 1529.

It has very frequently been stated that Querno was crowned in the Capitol. Mr. Roscoe (*Leo X.* ch. xvii.) has noticed, as countenancing this error, Bottari, Lancelotti, Angeli, and Colocci; the first-named boldly cites Paulus Jovius as an authority that the Pontiff *fece la funzione di incoronarlo*. Bayle also has spoken to like purpose. (*ad Leo X.*) But no one has given larger currency to this mistake than Pope in some highly finished lines in his *Dunciad*. Cibber, on his inthronization by Dulness, is thus likened to the Improvvisatore of Leo:

Not with more glee by hands Pontific crown'd,
With scarlet hats wide-waving circled round,
Rome in her Capitol saw Querno sit,
Thron'd on sev'n hills, the Antichrist of wit. (ii. 13.)

The original note is an egregious specimen of blundering. "He (Querno) was introduced as a Buffoon to Leo, and promoted to the honour of the Laurel, a jest which the Court of Rome and the Pope himself entered into so far, as to cause him to ride on an Elephant to the Capitol, and to hold a solemn festival on his Coronation;" and for this statement, as before, Paulus Jovius (*Elog. vir. doct.* xxxii.) is cited. The course of Warburton's studies (extensive as it was) did not lead him into the fields of modern Italy; but we are surprised to find the above error repeated, without comment or correction, in the edition of Warton, who, *siquis alius*, might be expected to have known

better: neither does Mr. Roscoe notice the sanction which it has received from our great Poet.

Strada's
account of
Querno.

The mistake, we doubt not, has arisen from two sources, partly from an invention of Strada, who introduces Querno into the Assembly of Poets, which he supposes to have been convened by Sadoletus, in so graphic a manner, that we shall venture to cite the passage at length, not only in illustration of our position, but for the excellence of the portrait. *Hæc dum Sadoletus favente mirum in modum concione diceret, insistere continuo cogitur, excitato in viciniâ ingenti hominum clamore, incertum plaudentium an exsibitantium. Scilicet ad Senatum in tempore accedebat Poetarum additamentum Camillus Quernus Monopolitanus, is quem Roma, Principi blandita, Archipoetam paulo ante salutaverat. Cum enim audisset eo die conventum haberi maximum Poetarum, ratus absque se Patrum numerum haud legitimum fore, properavit quantum per quadrupedem licuit ad vulgi clamores subindè restitantiem. Nec aliam induit speciem ab eâ quâ pridem Tiberinâ in insulâ, plaudente Populo Romano triumphaverat. Elephantum conscendit tapete Babylonico instratum, sparsimque argenteis crepitaculis circumsonantem: ipse segmentatâ veste conspicuus, rejectâ in humeris versicolore chlamydulâ, manu lyram tangebatur, obviosque Romanos Proceres carmine compellabat. Capiti illa eadem corona inerat, perplexa pampino, lauro, brassicâque quâ, super Tiberim, publico exceptus epulo, inter immania pocula donatus est. Circum ingens hominum plausus tanquam in Theatro identidem acclamantium.*

*Salve brassicâ virens coronâ,
Et lauro, Archipoeta, pampinoque,
Dignus Principis auribus Leonis.*

Prolus. ii. 5.

Here we have the Elephant, which, perhaps, may be the property of Querno, but which, as we shall see presently, belongs also to a competitor; but even here the Coronation in the Capitol is wanting. Strada, in the same *Prolusio*, (6. *ad fin.*) has put into the mouth of Querno some hexameters, which there can be little doubt are a grave imitation of his style. They do not bear the slightest appearance of burlesque or caricature, and as they abound in *concetti* and playings upon words, or rather upon syllables, a very brief specimen will suffice. The subject is a thunderstorm, which accidentally kindled some fire-works prepared on the Castle of St. Angelo for the celebration of a festival. The Poem opens with the following very forced description of nightfall,

*Nox aderat tandem, et cælum ex Cyclope diurno
Nocturnus tunc Argus erat.*

The storm rattles among the rockets, and the rockets reply to the storm, in the lines below:

*Hæc inter cæpit obnubi nubibus æther,
Orbari stellis orbes, veroque tonitru
Cælum indignari, Romæque indicare bellum.
Roma nec absistit. Dumque hinc atque inde tonabat,
Alternisque choris cælumque solumque canebant;
Falsèbat spectatores gratissimus error,
Anne darent plausum nubes, anne æra tonarent?
Cælesti clausum fureret sub nube metallum,
An nubes fureret Romano inclusa metallo?*

Well indeed may Strada characterise such strains, though received with acclamation, as *portentosa illa Poesis, quæ postea familiam duxit eorum, qui Camilliano exemplo Archipoeticè dicere instituerunt.*

Another cause which has occasioned a belief in the Coronation of Querno in the Capitol, is the real Coronation which Leo X. designed for a Poet of the same class, Baraballi of Gaieta, and which was frustrated only by the superior sagacity of an Elephant, upon which the buffoon was mounted. The story is thus related by Paulus Jovius, who was an eye-witness, and affords a very lively description of the manners of the Papal Court in the XVIth century. *Baraballi quoque Caietani eximie stoliditati procacius quam sacrosantum Pontificem deceret, illusit: quum ille insulsissimos versus, ab omni vocum et numerorum enormitate ridendos, facere et palam recitare soleret, seque alterum Petrarcham in Hetruscis rhythmis esse prædicaret: eò enim perpetuis adulationibus inflammatus gloriæ cupiditate perpulit, ut meritum gestandæ laureæ honorem postularit, ac subindè ut insigni pompâ in Capitolium duceretur, quod in Capitolio Petrarcham coronatum quondam fuisse audivisset. Tanta vero vis insanie fuit, ut quum ad famam publici apparatus legatio amicorum et affinium Caietanorum properè in Urbem convolasset, ut hominem a concepto furore deterrerent, acerbissimis verbis eos repulerit, tanquam malignè benignitatem Pontificis interpretantes, ac rarissimi honoris immortalis gloriæ suæ prorsus invidentes. Ergo, quod vix credibile foret nisi ea nos mirâ cum voluptate vidissemus, sexagenarius senex honestâ ortus familiâ, proceritate, vultu et canitie venerabilis, togâ palmatâ, et lato clavo, auro purpurâque nitenti, cæterisque Triumphum sumptuosius insignibus exornatus, in convivium, præcinentibus tibiis, deducitur, quum de more Pontifex diem festum Cosmæ et Damiani, Medicæ Familiæ Divis tutelaribus, dedicatum hilariter celebravit. Ibi, quum diu, ad ostentationem absolutæ artis, ineptissimè multa carmina decantasset, omnibus jam in ipsâ risus compressione defatigatis, ad extremum, in Aræ Vaticanâ despectante Pontifice elephantem adscendit, aureo ephippio superstante triumphali sellâ instratum. Cæterum inter tympana, et tubas et voces acclamantis populi consternatâ belluâ, ultra pontem Hadriani deduci pompa non potuit; cujus Triumphum memoriam lignarii cælatores, quum tessellato opere lascivirent, in interioris Pontificii cubiculi foribus scitissimè inscriptam reliquerunt. (Vita Leon. X. l. iv. p. 85. Ed. 1577.)*

Varillas in his *Anecd. de Florence*, has added a few particulars which are not found in Paulus Jovius; and which, no doubt, belong solely to the imagination of that very amusing, but not very authentic writer; who lost no opportunity of touching and refreshing such original pictures as he thought deficient in colouring; and whose claim upon belief may be very fairly estimated by his own spontaneous declaration to Menage, that "out of ten things which he knew he had learned nine from conversation." Thus he makes the Elephant not only restively decline the passage of the Bridge, but also throw his unhappy rider, and turning back again upon the procession, disperse and knock down the troop of Poets who swelled the Triumph. As a concluding marvel, the animal, after having occasioned all this mischief, returned into the court of the Vatican with his customary docility.

Baraballi was not the only one of this band of brothers who paid the price of his reception at Court by undergoing occasional contumely. We read in Gyraldi of frequent heavy inflictions upon Gazoldo, another Latin Improvisatore; and one yet more severe upon the Archipoeta himself. *An nescitis Gazoldum sæpius, ob*

ineptos versus et claudicantes, male mulctatum a Leone flagris. Archipoetam verò, immania ingurgitantem pocula, a ganeone Alexandro auribus et pæne naribus deformatum. (Dial. de Poet. suorum temp. ad fin.) So dangerous is it to minister even to the amusements of heartless despotism.

Silvio An-
toniano.

Tiraboschi continues a list of celebrated Improvvisatori of the XVIth century, during which Italian superseded Latin as the vehicle of their inspiration. But a simple catalogue of names is scarcely worth copying. Among them are some ladies, Cecilia Micheli, a Venetian, Giovanna de' Santi, and Barbara di Correggio, the last of whom was a nun. But no one of these times appears to have attained equal eminence with Silvio Antoniano. He was born of an obscure family in Rome, in the year 1540, and very early manifested so extraordinary a taste for Improvvising that he obtained the name of *Poetino*. His education was completed in the family of Cardinal Ottone Truces; at one of whose banquets, when exhibiting a specimen of his talents, he predicted the future possession of the Triple Crown to Cardinal Giannangelo de' Medici, one of the guests present, who was afterwards better known as Pius IV. He next attached himself to the Court of Hercules II. of Ferrara; and there he cultivated the friendship of Ricci, who, in one of his Letters to Giambatista Pigna, has given a lively picture of the powers which his friend manifested during a summer evening party. *Sylvius post prandium ad Lyræ cecinit primùm. Ut se de Amicitia dicturum non paucioribus versibus proposuit, convertit tantùm in meum villicum, quem ab optimâ agri colendi ratione maximè commendavit. Forte meus Architriclinus sponsæ desiderio tractus, quæ eum non longè ad suam villam expectabat, mirè properabat. Hujus desiderii Sylvium clanculum in auribus certiorum ut feci, tum is, nosti quam promptus sit, in hujus discessum versus suos convertit, atque amatorium ejus desiderium ita expressit ut nihil melius... sed rem miram audi. Dum canit Syloius, advolat Philumena avicula, in propriori ædibus muro consistit, cæpit et ipse illo suo vario gutture ad Lyræ sonum respondere, atque ita variè, itaque artificiosè ut dicere eam deditâ operâ in certamen cum Sylvio venisse. Animadvertit ille, atque ad eam aviculam aliquot versus, ut cæteros omnes, optimè compegit.* There can be little doubt that this very singular and agreeable incident gave rise to the well-known imitation of Claudian, which Strada (*Prolusio*, vi.) has attributed to Castiglione, in the very exquisite lines *Philomelæ ac Citharædi concertatio*. On the elevation of Pius IV. to the Papal Throne, Silvio was summoned to Rome and appointed Secretary to the Pope's Nephew, the Cardinal Borromeo. His talents, his virtues, and his diligence were finally rewarded by the purple itself from the hands of Clement VIII. in 1598, and he died full of honours in 1603, aged sixty-three. (Tiraboschi, iii. 4. 11.)

Origin of
Strada's
Philomela.Bernardino
Perfetti.

The diligence of Fabroni has intimately acquainted us with the personal history of Bernardino Perfetti, who was born at Sienna in 1680, a scion of a noble race. His education was very carefully superintended, and at so early an age as seven years he gave distinguished proofs of the direction of his genius, and his ungovernable passion for the Muses. The Latin Poets were his favourite study in youth, and his emulation as an Improvvisatore was awakened by listening to Giambatista Bindi, a celebrated contemporary artist,

and the prodigal applause by which his exhibitions were accompanied. Perfetti's first attempts were made in privacy among a few friends. Their encouragement increased his ardour, and his course was decided by a favourable accident. One day while amusing himself in the streets of Sienna, by singing extempore verses in praise of her illustrious citizens, the fury of inspiration overpowered him, and he burst forth in such a fervid torrent of Poetry that the astonished crowds which gathered round him, in the end, conducted him home in triumph.

Perfetti was now a professed Improvvisatore; but though reciting extemporaneously, and trusting to his divine orgasm for the apparel in which his conceptions should be invested, he by no means neglected that previous furniture of the mind, without which he would be most likely to vent a fluent succession of emptinesses. He read profoundly and extensively; and occupied his leisure not less in the cultivation of Science than in a diligent study of History. Those who heard him Improvise, spoke with astonishment both of the wide range of his knowledge and the promptitude with which it was poured out. He never hesitated; his enunciation was clear and distinct, though his delivery was often so rapid, that the musician who, for the most part, accompanied him on a guitar, not unfrequently found it difficult to keep pace with him. The Pythoness herself, if we credit the account of Fabroni, seems to have been scarcely less agitated under the influence of her prophetic transports than Perfetti was while in the act of Improvvising. The symptoms before described of Marone were exhibited in him; from time to time he swallowed a few drops of water; less, as we are told, for refreshment than to cool the burning thirst of his soul. At the conclusion he fell back motionless and almost lifeless. The night following was passed without sleep; and many days were necessary to cool his blood, to tranquillize his pulse, and to reestablish his ordinary calmness.

He visited Rome more than once. On the second occasion, while forming one of the suite of the Princess Violante of Bavaria, Benedict XIII., a Pontiff chary in the distribution of literary rewards, conferred upon him that distinguished honour which had been accorded to Petrarch, had been designed for Tasso, and which, as we have just seen, had been so nearly profaned by the mockery of Baraballi's admission to it. Perfetti underwent a rigid examination before Judges who were bound by oath to strict impartiality. Twelve subjects were proposed to him, embracing the whole cycle of Philosophy; and he was required to Improvise on Theology, on Natural Philosophy, on Mathematics, on Jurisprudence, on Morals, on Medicine, on Gymnastics, and on Poetry; matters which, with the exception of the last, it may be supposed were purposely chosen as so many stumbling blocks for the discomfiture of his genius. But Perfetti triumphed in them all, and the Judges pronounced sentence of Coronation. The day was fixed. In a car splendidly gilt and drawn by fiery horses, he was borne to the Capitol, amid the shouts and gratulations of a countless multitude. There, kneeling before the Senator, Maria Frangipani, he received the Laurel from his hands; he was permitted to add it to his armorial bearings; he was dignified with the title of Citizen of Rome, and medals, bearing his crowned impress, were struck in his honour. Sienna in a solemn Assembly returned thanks to the Pontiff for

the favour thus granted to one of her sons. Perfetti amid all his glories retained the most amiable modesty; and long after, when another Pope, Clement XI., was extolling his powers, he returned the following memorable and simple answer. "These powers, be they what they may, flow from the blessing of God, who has gifted me with the spirit of Poetry, even as he lent speech to the Ass which Balaam bestrode. We must not pride ourselves too much upon that for which we are indebted to the bounty of another." He never published, and he even disavowed the few fragments which copyists took down from his lips. His death, which occurred in July 1747, was the result of Apoplexy; his remains were attended to the grave by all Orders of his fellow-citizens; and according to his own request his Laurel Crown was suspended on his Monument in the Church of *Sta. Maria de' Martiri*.

Metastasio.

Metastasio must not be omitted among the Improvisatori. His friend and original patron, Gravina, (by whom his family name Trapassi was changed, by Græco-Italian metamorphosis, into that under which alone he is now recognised,) was first accidentally attracted by hearing the Poet, at ten years of age, sing his own extemporaneous verses in the streets of Rome. The effects produced upon his constitution by indulgence in the fervour necessary to animate him to the full height of this physically dangerous enthusiasm, were so violent, that, by medical advice, he most reluctantly abandoned it. He is said to have swooned after the exertion, to have been carried senseless to his bed, to have been reanimated only by cordials, and not to have recovered self-possession before the lapse of at least four and twenty hours.

Zucco.

Laurenzi.

Corilla
Olympica.

Tuscany and the Venetian States, more especially Sienna and Verona, have always been the great nurseries of Improvisatori; at the last-named city an Ecclesiastic, Zucco, acquired great reputation about seventy years since, and he was succeeded in his honours by the Abbate Laurenzi. Both of these, however, were eclipsed by a native of Pistoia, whose name has become, as it were, proverbially connected with the Art, and who is, perhaps, far better known than any of her predecessors whom we have already mentioned. Maria Maddelena Fernandez was born in 1740. Like Perfetti, she very early manifested great precocity of genius, and no ordinary mastery of song. But it was not until she attained her twentieth year that she publicly exhibited as an Improvisatrice. She married Signor Morelli of Leghorn; but if we trust the scandalous Chronicle of her days, she paid her devotions quite as frequently in Paphos as on Parnassus. Maria Theresa invited her to Vienna in 1765, and there, as female Laureate, she published some Lyrical Pieces and an Epic Poem. In 1771 she fixed her abode at Rome, and was enrolled among the *Arcadi* as *Corilla Olympica*, the name by which she is most familiarly and generally recollected. Pius VI. was precisely a Sovereign whom the display of a Coronation in the Capitol was likely to please; and, rejoicing in the opportunity afforded him, he determined to renew, in the person of Corilla, the ceremonial which had been enacted for Petrarch and Perfetti. Her examination took place in 1779, and full particulars of it, and of her subsequent Coronation,* with all the *Sonetti, Canzoni, Can-*

zonette, &c. to which it gave birth were printed by Bodoni at Parma in 1779, under the title of *Atti della solenne Coronazione fatta in Campidoglio della insegna Poetessa Donna Maria Maddelena Morelli Fernandez Pistoiese, tra gli Arcadi Corilla Olimpica*. It may suffice to say, in brief, that, after three days' submission to the scrutiny of twelve Judges selected from the *Arcadi*, (all of whom are represented to have been eminent in Literature and Criticism, and whom it would be a breach of courtesy to suppose otherwise, for among them they counted a *Principe*, an *Archivescovo*, three *Monsignori*, the Pope's own *Medico*, and the rest were all *Abbati* or *Avocati*.) Corilla was drawn in triumph to the Capitol, accompanied by a troop of illustrious Ladies; that she kneeled there to the *Conservatore*, who was seated under a canopy, that the Cavaliere Paolo de' Cinci placed a Laurel crown on her brows, and that his kinsman Giovanibattista Cinci registered the Act amid the discharge of a hundred cannon. Corilla retired from Rome in 1780; and prudently aware how much of her reputation must be ascribed to the glow which youth and beauty shed over her performances, she declined them when these attractions were in their wane. Her skill as a Musician was scarcely less than as a Poetess, and she not only sang her own verses simply and in good taste, but she was distinguished as a performer on the violin. She died at Florence in November, 1800.

The Art, however, by no means expired with Corilla. Forsyth, who visited Florence in 1802, commemorates *La Fantastici*, an Improvisatrice, whose rapidity and command of numbers disarmed his usual causticity. She had a rival, *La Bandettini*, and among her admirers she had once enrolled a crooked stay-maker, Gianni, who was reputed to be unequalled in impromptu. *La Fantastici* herself, however, "set an old Tuscan peasant above all the tribe, as first in original and poetic thinking." The reflections to which her exhibitions gave rise in Forsyth are most just; and he has probably found the key by which the secret of Improvising is unlocked. "Such strains pronounced and sung unmeditated, such prompt eloquence, such sentiment and imagery flowing in rich diction, in measure, in rhyme, and in music, without interruption and on subjects unforeseen, all this must evince in *La Fantastici* a wonderful command of powers; yet, judging from her studied and published compositions, which are dull enough, I should suspect that this impromptu exercise seldom leads to poetical excellence. Serafino the first Improvisatore that appeared in the language, was gazed at in the Italian Courts as a divine and inspired being, till he published his verses and dispelled the illusion.* An Italian Improvisatore has the benefit of a language rich in echoes. He generally calls in the accompaniment of song, a lute or a guitar, to set off his verses and conceal any failures. If his theme be difficult, he runs from that into the nearest commonplace, or takes refuge in loose Lyric measures. Thus

* The difficulty of obtaining a correct date, even in so recent a transaction, is remarkable. The writer of a very short notice of Corilla in Rees's *Cyclopædia*, who professes to have heard her play and sing at Florence in 1770, fixes the Coronation on Feb. 16, 1776.

The *Gentleman's Magazine* for that year first names Sept. 3, and afterwards July 31. The compilers of the French *Dict. Historique*, under *Morelli*, say Aug. 31, 1771; under *Pizzi*, (the Director of the *Arcadi* during the ceremony, who distinguished himself by a very irreverent witticism,) the same day, 1766. And lastly, in the XIVth Volume of the *Annual Register* (175) we find Aug. 30, 1776, which we believe to be right.

* We have ventured above, p. 609, to express a different opinion from that of Mr. Forsyth, on Serafino's Poetical merits.

he may be always fluent, and sometimes, by accident, be bright." (51.)

Sgricci.

The facility of the Italian language frequently produces very laughable effects. M. Simond describes pleasantly enough the natural alarm which a lady once felt at hearing her husband burst into a fit of Improvvising, "being suddenly inspired one day whilst at dinner with his friends, no circumstance during many years of his society having ever led her to suppose that he was so gifted." (*Tour in Italy*, 126.) The great Improvvisatore during M. Simond's visit in Rome (1817, 1818) was Tommaso Sgricci, the son of an advocate of Arezzo, educated at a branch of the University of Pisa established at Florence, and intended for the Law. In his dress and manners he was a most egregious and effeminate coxcomb, "a well-made little man about twenty-five years old, with the shuffling gait and mincing step of a woman in man's clothes, wearing nice yellow morocco shoes, with white pantaloons and waistcoat; showing a lily-white hand, with diamonds sparkling on all his fingers, and an embroidered shirt-collar falling over his shoulders, and leaving his neck bare. His handsome, expressive face was shaded with an abundance of black hair and luxuriant whiskers." He would not exhibit on the stage, but borrowed a room in a Palace, to which the audience was admitted by purchased tickets. Before his appearance a number of subjects were written on pieces of paper, and thrown indiscriminately into a box; four of these were drawn out in a manner which effectually prevented any suspicion of imposture: upon three of them were "the dispute about the armour of Achilles," "the Creation," and "Sophonisba;" and M. Simond thus relates the Poet's treatment of them. "He paused, and then began without recitative, singing, or musical accompaniment of any sort, and went on without hesitation or seeming effort, only occasionally repeating the same verse twice over. I lost too much to give any opinion on what he said, the manner taking my attention at first more than the matter, and that manner was admirable: his voice, action, and expression of countenance were those of a good actor, knowing his part thoroughly, and full of its spirit. I felt uneasy a long while, thinking he could not go on thus fluently and easily, and must come to a full stop, be lost in difficulties, and tumble down from his giddy height. Sometimes I surmised that this must be a studied part, and an imposition upon our credulity, yet when I recollected how the subjects had been given and submitted to chance, afterwards I was satisfied that collusion was impossible. If we had been astonished at Sgricci's first two extempore Poems, how much more so were we when he gave us a Tragedy in three Acts, on the story of Sophonisba, stating first his *Dramatis Personæ*: viz. Sophonisba, and Syphax her husband, Massinissa and Scipio, Sophonisba's female attendant Barca, and a Roman soldier. The Improvvisatore never mentioned the name of the interlocutors; but the change of tone, and frequently also the change of place, rendered such announcements unnecessary. He used the heroic Italian blank verse of eleven syllables; but in the Chorus, which recurred several times, he used all sorts of measure from four to twelve syllables. The Tragedy lasted two hours and a half; he died twice in the course of it; once on the floor, to suit the English taste I presume, and once in an arm-chair in the French decorous manner; both times with appropriate action, very energetic, but very natural and graceful, and never

outré. His fine tones were quite free from the guttural *r. r. r.* with which the Italians are apt to spoil their sweet harmonious language. He forgot the coxcomb in the transports of the Poet, and never once, I really believe, thought of his rings or watch-chain during the whole time. His great fault was abundance. Had he had a little time to consider, I have no doubt he would have been much more terse and effective. Yet this very abundance excites astonishment: for who would undertake to construct verses, even nonsense verses, in correct measure during two hours and a half? and when it is considered, that instead of nonsense, a regular plot was contrived and carried through, although, perhaps, with the help of recollections as well as invention, and that the story was, in this instance, not only plain and intelligible, but often told with great force and eloquence, so as to draw sudden bursts of applause from an audience generally cool and silent, the thing appears almost miraculous. At the conclusion there was a rush of a number of admirers towards the Poet, and he was carried off among them in a sort of spontaneous triumph." (267—272.)

The effect produced on M. Simond by Sgricci was not removed by a repetition of the experiment, even when he heard him on a bad subject for a Tragedy, the *Death of Socrates*. It must be confessed, however, that on this occasion most of the audience fell asleep. He will not write; wisely answering, that he is the first in his own line, and he does not know what he may be in any other. "In fact," adds M. Simond, "I have a sonnet of his on Ney, or rather on Ney's widow, which is mere ranting common-place."

A very similar account of Signor Sgricci may be found from the pen of the lively writer of *Rome in the XIXth Century*, (*Letter 83.*) who differs nevertheless from Simond respecting one point, upon which disagreement was very little to be expected; "the harsh Tuscan accent is very distinguishable in his enunciation." This Lady heard him Improvvisare a Tragedy on *Medea*. One of the audience, not long before, had been present when the same theme had been given to the Poet at Florence; but, on the repetition, two new characters were introduced, the action was opened at a different part of the story, and neither a single scene, nor even speech, resembled any of those in the former Play.

A young Neapolitan Improvvisatrice, Rosa Taddei, and another, Signore Biondi, are mentioned by the same writer as sharing Sgricci's fame during 1817, 1818. She believes that the accompaniment of music is used less to conceal any irregularity of metre, than to kindle the inspiration of the performer,—probably it assists both purposes. "They often compose with *rime obbligate*, that is, the rhymes and measure, as well as subject, are assigned them. This, to my great astonishment, one of them assured me, he found even easier than unshackled composition, because the rhymes being chosen, saved him the necessity of searching for them; so that it is plain he adapted the sense to the sound, not the sound to the sense. It is very common, too, to have a *verso obbligato*, a distich taken from any popular poet, assigned them, which they must introduce at the end of every eight-line stanza.

"It is scarcely possible that verses so composed should ever be very fine, and sometimes they are very bad; but they are occasionally wonderfully pretty, and adorned with images and allusions which it is amazing they should have been able to conjure up in the moment.

who instantly composed some very pretty lines upon it;
and a *Pen*, upon another occasion, called forth a still
more ingenious Poem from a gentleman.

"By far the most interesting performance of the kind is, when two sing together, or rather against each other, in alternate stanzas; something like the contests in Virgil's *Eclogues*, or the trials of skill between ancient bards. The *Improvvisatori*, fired by each other's strains, by rivalry, and emulation,—pour out their Strophe and Antistrophe with a degree of increasing fervour and animation, that carries away their audience, as well as themselves."

Anna Louisa
Karch.

A single Improvvisatrice has acquired celebrity in modern Europe, without being a native of Italy. Anna Louisa Karch, the daughter of a peasant, who kept a small brewery and public-house in an obscure village of Lower Silesia, was born in 1732. She was taught reading and writing; but the chief employment of her childhood was tending her father's cows. At seventeen she married a mechanic in her own class, and shared his toils. A second marriage, when he died nine years after, contributed neither to her elevation nor her happiness. It was while engaged with her father's herds that her peculiar talent developed itself. She was fond of singing, and she adapted extemporaneous words to such popular airs with which she was acquainted. Her reading was confined to a few common Romances, which accidentally fell into her hands. Her powers were not exercised, like those of the Italian

Improvvisatori, in composing long Poems on subjects unconsidered beforehand; but the few short pieces which have been printed from her dictation, are said not only to abound in fervid Poetry, but to be framed with precision and correctness seldom belonging to extemporaneous verse. Some Fragments of her compositions may be seen in the *Gazette Littéraire*, ii. 369.

That the rapid production of at least harmonious verse is of no difficult acquirement, is plain enough from the deluge of such song with which we in England are at present inundated, in our Annuals, our Quarterlies, our Monthlies, our Hebdomadals, and even our Journals. The *Carcanets*, the *Amulets*, the *Forget-me-not's*, the *Souvenirs*, and the *Bijoux*, are little more than channels for Improvvisation, and that, probably, not inferior in quality to the boasted effusions of Perfetti, Corilla, and Sgricci. It is one of the effects resulting from an acquaintance with Letters widely diffused, but not profoundly rooted. We need not remark that Verse is often far removed from Poetry; and to those who, not content with ephemeral applause, seek "to make another Age their own," we should recommend the severe but salutary discipline of nine years' repression and castigation, rather than the light and hasty effusion of the moment. The beverages which are rich, racy, and generous, the zest of which lingers on the palate, and above all, which possess sufficient body to endure *keeping*, must undergo many slow and successive processes before they acquire their fulness of flavour and aroma. They must submit to a first and second fermentation; they must precipitate and deposit all grosser matter, and become inspissated solely with that which is pure; they must be fined, clarified, and racked, till they are matured and mellowed into perfection. On the other hand, such as are thin and frothy, though perhaps sweet and sparkling, are transferred in all their unripe crudeness from the wine-press or the cask; they effervesce for a moment, and are then exhaled in bubbles.

Jortin. *Works*, vol. i. p. 353. *Remarks on Ecclesiastical History*.

In a word, this important representation instructs us in these two
points of doctrine: first, that the kingdom, whose blessings were
produced by the death and passion of Christ, was secured to us even
from the foundation of the world: and secondly, that it was actual
righteousness, as well as *imputative*, which made those who had
never heard explicitly of Christ, to become partakers of his merits.

parts of the body." *Diversions of Purley*, vol. i. p. 457, note. *In* is not included *by name* in the Diagram of Wilkins for the explication of what he calls the local prepositions; but he seems to consider it as equivalent in usage, when expressing motion,—to the compound *into*, and,—when expressing rest,—to the compound *within*. The former he represents upon the edge of a globe in motion of *ingress*; the latter near the centre in a state of rest.

In composition it has either the effect of giving force or emphasis to the word to which it is prefixed; or of merely adding its own signification.

In is sometimes written by old writers for *on* or *upon*. As in Chaucer,—

And *in* an hill how wretchedley he deid.
The Monkes Tale, v. 14500.

He starfe full wretchedly *in* a mountaine.
Id. v. 14545.

2. *IN*, privative, must be another word, or a corruption of other words; perhaps *sin*, or *sine*, *i. e.* *sit ne*; thus *sinplex*, or *simplex*, is *sine plicâ*; *sincerus*, *sine cerâ*. And Minshew interprets the compounds of *in*, privative, (upon this presumption, perhaps,) thus, *incorporalis*, *q. sincorporalis*, *i. e. sine corpore*: *indecorum*, *q. indecorum*, *i. e. sine decore*. This negative is in English also, and in the A. S. and Gothic always, written *un*, *q. v.*

Many words formerly written *en* or *em*, are now usually written *in* or *im*, and the contrary; many were written capriciously either *en* or *in*; and many still continue to be so.

Examples sufficiently numerous will be found in the past and following pages. See *EN*.

Stillingfleet. *Works*, vol. ii. p. 490. *Sermon* 9.

INACTUA'TION. } ENACT.

To cause to *act*, or do, to put into *act* or *action*, into a state of *action* or *activity*.

The soul in this condition was united with the most subtle and ethereal matter that it was capable of *inacting*.

Glanvil. *Preexistence of Souls*, ch. xiv.

For the plastick in them is too highly awakened, to *inactuate* only an aerial body.

Id. *Ib.* ch. xiv.

That those powers should each of them have a tendency to *action*, and in their turns be exercised, is but rational to conceive, since otherwise they had been superfluous. And 2. that they should be inconsistent in the supremest exercise and *inactuation*, is to me as probable.

Id. *Ib.* ch. xiii.

labour or exertion; rest, quietness.

If the higher powers might have lessen'd, and sayld without a proportionable increase of the lower, and they likewise have been remitted without any advantage to the other faculties, the soul might then at length fall into an irrecoverable recess and *inactivity*.

Glanvil. *Preexistence of Souls*, ch. xiii.

The same ideas may be continued without the existence of the same objects, and new ones, and simple ones too, produced by the abatement or alteration of the force impressed, or even by the absence or *inaction* of these objects, as well as by their actual presence and operation.

Law. *Enquiry. Of Space*, ch. i. p. 43.

Such for instance are these advices: not to intrude one's self into the mysteries of government, which the prince keeps secret; not to suffer one's self to be led away by the seeming charms of an idle and *inactive* life,—to which the Syrens' song invited.

Pope. *The Fable of the Odyssey*, sec. 3.

Virtue conceal'd within our breast
Is *inactivity* at best.

Swift. *Horace*, book iv. Ode 9.

If, dead to these calls, you already languish in slothful *inaction*, what will be able to quicken the more sluggish current of advancing years?

Blair. *Sermon* 11. vol. i. p. 224.

I never saw any thing so weak and *inactive* as the poor horses were; they had not agility enough to avoid one stroke.

Swinburne. *Spain*, let. 40. p. 367.

Every one exerted himself to the uttermost, with a quiet and patient perseverance, equally distant from the tumultuous violence of terror, and the gloomy *inactivity* of despair.

Cook. *Voyages*, vol. ii. book iii. ch. iii. p. 130.

INA'DEQUATE, } Lat. *in*, privative, *ad*, *æquare*,
INA'DEQUATELY, } to be even or *equal*.
INA'DEQUATENESS. } Not even or *equal* to; un-
equal, insufficient, disproportionate, incommensurate.

If His attributes and perfections be not fully comprehensible to our reason, we can have but *inadequate* conceptions of them.

Boyle. *Works*, vol. iv. p. 159. *Considerations about the Reconcilableness of Reason and Religion*.

Those [ideas] I call *adequate*, which perfectly represent those archetypes which the mind supposes them taken from; which it intends them to stand for, and to which it refers them. *Inadequate* ideas are such, which are but a partial or incomplete representation of those archetypes to which they are refer'd.

Locke. *Of Human Understanding*, book ii. ch. xxxi.

That may be collected generally from the *inadequateness* of the visible means to most notable productions.

Goodman. *Winter Evening Conferences*, p. 11.

It will be proper to shew that a distribution of parts has been attempted, which, though rude and *inadequate*, will at least preserve some order, and enable the mind to take a methodical and successive view of this design.

Johnson. *Works*, vol. ii. p. 279. *Preface to Rolt's Dictionary*.

We must accept them, [translations] with all their unavoidable imperfections, as, in general, sufficiently representative of the sense of their originals, though in some particulars that sense be *inadequately* conveyed to us.

Hurd. *Works*, vol. viii. p. 320. *Letter to Dr. Leland*.

INADMISSIBLE. Fr. "*inadmissible*; unadmittible, unreceivable, unacceptable, unallowable." Cotgrave. See To ADMIT.

The word appears to be of very modern introduction into our language.

The *inadmissible* pretension is there avowed of appropriating to France all that the laws existing may have comprised under the denomination of French territory.

Burke. *Works*, vol. viii. p. 120. *On a Regicide Peace*, note.

He, the said Warren Hastings, did, on pretence of certain political dangers, declare the relief desired to be without hesitation totally *inadmissible*.

Id. *Ib.* vol. xii. p. 239. *Charge against Warren Hastings*.

INADVE'RTENCY. } *tens*, from *advertere*, to turn to,
(*ad*, and *vertere*, to turn,) to turn the mind to, to attend to.

Inattentive, inconsiderate, incautious, careless, negligent, improvident.

For *inadvertency*, or want of attendance to the sense and intention of our prayers, is certainly an effect of lukewarmness, and a certain companion and appendage to humane infirmity; and is only so remedied, as our prayers are made zealous, and our infirmities pass into the strengths of the Spirit.

Taylor. *Sermon* 5. fol. 49.

Oft *inadvertent*, from the milky stream

They met their fate; or, weltering in the bowl,

With powerless wings around them wrapt, expire.

Thomson. *Summer*.

And as for the wall it was alledged, That he had taken it *inadvertently*, to save himself from a shower of rain which was then falling.

Tatler, No. 256.

He [my father] was a person of that rare conversation that upon frequent recollection, and calling to mind passages of his life and discourse, I could never charge him with the least passion or *inadvertence*.

Evelyn. *Memoirs*, vol. i. p. 2.

Such little blemishes as these, when the thought is great and natural, we should, with Horace, impute to a pardonable *inadvertency*, or to the weakness of human nature.

Spectator, No. 285.

However, he allows at length, that men may be dishonest in obtruding circumstances foreign to the object; and we may be *inadvertent* in allowing those circumstances to impose upon us.

Warburton. *Works*, vol. i. p. 187. *Postscript to the Dedication to the Free-thinkers*.

If, after descending a flight of stairs, we attempt *inadvertently* to take another step in the manner of the former ones, the shock is extremely rude and disagreeable; and by no art can we cause such a shock by the same means when we expect and prepare for it.

Burke. *Works*, vol. i. p. 282. *On the Sublime and Beautiful*.

INADE-
QUATE.

—
INAD-
VERTENT.

INAD- VERTENT. When the intention seems upright, and the end proposed is to make men better and wiser, what is not ill executed should be received with approbation, with good words and good wishes, and small faults and *inadvertencies* should be candidly excused.
Jortin. Discourses, vol. i. p. 2. Discourse on the Christian Religion. Preface.

INAIDABLE, *in*, privative, and *aid*, *q. v.* Fr. *aider*; It. *ajutare*; Lat. *adjuvare, adjutum*, to help.

Aidless, or helpless; that cannot be *aided*, helped, or assisted.

The congregated colledge haue concluded,
 That labouring Art can neuer ransome Nature
 From her *inaydible* estate.

Shakspeare. All's Well that Ends Well, fol. 235.

INALIMENTAL, *in*, privative, and *alimental*, *q. v.* Lat. *alimentum*, from *al-ere, alitum*, to nourish.

Not able to nourish; or give or supply nourishment.

The dulcoration of things is worthy to be tried to the full; for that dulcoration importeth a degree to nourishment: and making of things *inalimental* to become *alimental*, may be an experiment of great profit, for making new victual.

Bacon. Natural History, Cent. vii. sec. 649.

INALTERABLE, *in*, privative, and *alterable*, *q. v.* now written *un-alterable*.

That cannot be *altered* or changed.

As the throne is majesticall and permanent, so is his residence in it; He sate in the throne. S. Stephen saw him standing, as it were ready for his defence and protection: S. John sees him setting (as our Creed also runnes) in regard of his *inalterable* glory.

Hall. Works, vol. i. fol. 427. A Farewell Sermon, &c.

INAMELL, also anciently, and now usually, written *Enamel*, *q. v.*

To fix colour, or a variety of colours by *melting* in the fire; to diversify, to variegate, to spot, to deck with spots or variations of colour.

The tombe is so high, that it farre exceedeth in heighth the mosquita, being couered with lead, and the top all *inamelled* with golde, with an halfe moone vpon the top.

Hakluyt. Voyages, &c. vol. ii. fol. 211. The Pilgrimage to Mecca.

Or rather as *inamillers*, guilders, and painters of images following after.

Holland. Plutarch, fol. 807.

INAMISSIBLE, *in*, privative, and *amissible*, from Lat. *amittere, amissum*, to lose.

That cannot be lost.

Had we been so fixt in an *inamissible* happinesse from the beginning, there had then been no vertue in the world; nor any of that matchlesse pleasure which attends the exercise thereof.

Glanvil. Preexistence of Souls, ch. viii.

God loveth to blesse one degree of grace with another, till it comes to a confirmation in grace, which is a state of salvation directly opposite to obduration; and as this is irremediable and irrecoverable, so is the other *inamissible*.

Taylor. The Great Exemplar, part iii. sec. 13. p. 424.

INAMOUR, } More usually written *en-amour*.
INAMORA'TA, } Lat. *amor*, from *am-are*, to love.
INAMORA'TO. } To cause to love, to inspire or inflame with love.

Theare, after prayers, church-times, sights,
 And stories sometimes read,
 Amongst their merrie tales was this,
 How one *inamour'd*, spread.

Warner. Albion's England, book xii. ch. lxxv.

The fair *inamorata* (who from far
 Had spy'd the ship which her heart's treasure bare
 Put off from land;)
 With frantic speed from the detested town
 To the deserted shore comes hurrying down.

Sherburne. Forsaken Lydia.

In that file stands another of your *inamoratoes*.

Beaumont and Fletcher. The Fair Maid of the Inn, act iii. sc. 1.

As for my dear, never man was so *inamour'd* as I was of her fair forehead, neck and arms, as well as the bright jett of her hair; but to my great astonishment, I find they were all the effect of art.

Spectator, No. 41.

These gentlemen are of that sort of *inamoratoes*, who are not so very much lost to common sense, but that they understand the folly they are guilty of.

INA'NE, } Fr. *inanité, inanition*; Sp. *inani-*
INANI'TION, } *cion*; Lat. *inanitas, inanis*, from the
INA'NITY. } Gr. *iveiv, vacuare*, to empty, to throw, cast or clear out.

Emptiness, (or an emptying, Cotgrave,) vacuity, voidness.

'Tis easie to draw a parallelism between that ancient, and this more modern nothing: and in all things to make good its resemblance to that commentitious *inanity*.

Glanvil. The Vanity of Dogmatizing.

And as he must not eat overmuch, so he may not absolutely fast; for as Celsus contends, repletion and *inanition* may both doe harme in two contrary extreames.

Burton. Anatomy of Melancholy, fol. 235.

We sometimes speak of place, distance, or bulk in the great *inane*, beyond the confines of the world.

Locke. On Human Understanding, book ii. ch. xv. sec. 7.

When one can find out, and frame in his mind clearly and distinctly the place of the universe, he will be able to tell us, whether it moves or stands still in the undistinguishable *inane* of infinite space.

Id. Ib. book ii. ch. xiii. sec. 10.

But nothing still from nothing would proceed:

Raise or depress—or magnify—or blame,

Inanity will ever be the same.

Smart. The Hilliad.

Without, not having, life, breath, spirit; lifeless, breathless, spiritless, soulless.

Inanimate, the verb, in Donne, to *animate*, to inspire or inspirit. See also the noun *inanimation* from Hall.

Though she, which did *inanimate* and fill
 The world, be gone, yet in this last long night
 Her ghost doth walk, that is, a glimmering light,
 A faint weak love of virtue and of good
 Reflects from her on them, which understood
 Her worth.

Donne. The Anatomy of the World. The First Anniversary.

We see what great and admirable things Nature herself effects in things that are *inanimate* and void of sense, rather than lose her end.

Milton. Works, vol. i. fol. 497. A Defence of the People of England.

Albeit the mover had been more excellent, might not the motion have been accounted less perfect, by reason of the deadness and *inanimateness* of the subject mov'd.

Mountague. Devoute Essayes, Treat. 2. vol. ii. sec. 3.

Satan accounts it no small mastery, if he can prevail with us so far as to bereave us of this habitual joy in the Holy Ghost, arising from the *inanimation* of Christ living and breathing within us.

Hall. Works, vol. iii. fol. 599. Christ Mystical.

O fatal change! become in one sad day
 A senseless corpse! *inanimated* clay!

Pope. Homer. Iliad, book xxii.

There are several kinds of creatures in the world, and several degrees of dignity amongst them, some being more excellent than others, *animate* more than *inanimate*, sensitives more than vegetives, and men more than brutes.

Bishop Wilkins. Natural Religion, book i. ch. ii. p. 15.

Galen says, "Plato declares that animals have constantly a soul, which serves to *animate* and inform their bodies: as for stones, wood, and what we commonly call the *inanimate* parts of the creation; all these, he says, are quite destitute of soul.

Want of *appetence*, or *appetite*; of desire; of desire
to eat.

When some squeamish and disrelished person takes a long walk to
the physician's lodging, to beg some remedy for his *inappetence*, his
very walking thither does, in some measure, give him that good
stomach he hopes to regain by the medicines he shall get there.
Boyle. Works, vol. vi. p. 23. *A Discourse against Customary*
Swearing.

Which immature death my relator judged to be caused by their

mind or understanding; not to be understood or con-
ceived; inconceivable.

Nor did I slumber over that place, expressing such high rewards
of ever accompanying the Lamb, with those celestial songs to others
inapprehensible, but not to those who were not defiled with women.

Milton. Works, vol. i. fol. 112. *An Apology for Smectymnus*.

Neither are they hungry for God, nor satisfied with the world, but
remain stupid and *inapprehensive*, without resolution and deter-
mination, never chusing clearly, nor pursuing earnestly.

Taylor. Sermon 5. fol. 47.

From these so pernicious vices of the spirit, then, that is, from a
fluctuating faith, an inconsiderate levity, an *inapprehensive* deadness of
heart, and a perverse sophistical abuse of the understanding, let us
emancipate ourselves by a firm, attentive, vigorous, and ingenuous
dependance on the promises of the gospel.

Hurd. Works, vol. iii. p. 60. *Sermon 32.*

The wise in their own conceits, not being able to clear up many
parts of the divine dispensations, whether of nature or grace, to their
satisfaction, hastily conclude that there is no fitness or wisdom, where

The ingress of a *beam*, or ray of light; irradiation.

And for all these boastings of new lights, *inbeamings*, and inspirations; that man that follows his reason, both in the choice and defence of his religion, will find himself better led and directed by this one guide, than by an hundred Directories.

South. *Sermons*, vol. iv. p. 293.

INBEING, *in*, and *being*. See **TO BE**. Apparently intended by Watts as more emphatical than *Being*; *q. d.* inherent, inseparable, *being*.

But when we say, the bowl is swift or round, when we say, the boy is strong or witty, these are proper or inherent modes, for they have a sort of *in-being* in the substance itself, and do not arise from the addition of any other substance to it.

Watts. *Logic*, part i. ch. ii. p. 22.

INBORN, *in*, and *born*, *q. v.* past participle of the verb *to bear*.

Native or innate; infixed or implanted at the *birth*, or earliest moment of life or existence, by nature.

The sacred poets first shall hear the sound,
For they are cover'd with the lightest ground;

INBORN.
—
INCAGE.

And straight, with *inborn* vigour, on the wing,
Like mounting larks, to the new morning sing.

Dryden. Ode 2. To the Memory of Mrs. Anne Killigrew.

When men have been so long settled in a place, that the majority of the inhabitants are become natives of the soil, the *inborn* love of a country has, by that time, struck such deep roots into it, that nothing but extreme violence can draw them out.

Warburton. The Divine Legation, book iv. sec. 3.

INBREATHE, *in*, and *breathe*, *q. v.*

Breathed into; inspired.

Blest pair of Sirens, pledges of heav'n's joy,
Sphere-born harmonious sisters, Voice and Verse,
Wed your divine sounds, and mix'd pow'r employ,
Dead things with *inbreath'd* sense able to pierce.

Milton. Ode. At a solemn Music.

— That paternal, tender love and grace,
Which at man's fall immediately took place;
That inward, holy thing, *inbreathed* then,
Which would rekindle heav'n in him again.

Byrom. Fragment.

INBRE'ED, *v.* } *In*, and *breed*, *q. v.* A. S. *bred-*
I'NBRED. } *an*; D. *broeden*; Ger. *bruten*, to

nourish, to cherish; to give birth, life, or existence to.

To *breed* within; to give birth or life to, to ingender, or generate within.

These abilities, wheresoever they be found, are the inspired gift of God rarely bestow'd, but yet to some (though most abuse) in every nation: and are of power, beside the office of a pulpit, to *inbreed* and cherish in a great people the seeds of virtue, and public civility, to allay the perturbations of the mind, and set the affections in right tune.

Milton. Works, vol. i. fol. 60. The Reason of Church Govern-
ment.

Those different and perpetual carriages of state-government, haste and delay, as *inbred* qualities, were remarkable in the two most martial people in Greece.

Selden. Illustrations of Drayton's Poly-olbion, song 1.

Where, Judah where, is now thy lion's roar?
Thou only couldst the captive lands restore:
But thou, with *inbred* broils and faction prest,
From Egypt needst a guardian with the rest.

Dryden. Absalom and Achitophel.

In England we have not yet been completely embowelled of our natural entrails; we still feel within us, and we cherish and cultivate, those *inbred* sentiments which are the faithful guardians, the active monitors of our duty, the true supporters of all liberal and manly morals.

Burke. Works, vol. v. p. 166. On the Revolution in France.

I'NBURNING, } *i. e.* *Burning* within.
I'NBURNT.

Which sorry words, her mightie hart did mate
With mild regard, to see his ruefull plight,
That her *in-burning* wrath she gan abate,
And him receiv'd againe to former fauours state.

Spenser. Faerie Queene, book iv. can. 8.

Upon her steps a virgin page attended,
Fair Erythre, whose often blushing face
Sweetly her *in-burn(t)* shame-fac'd thoughts commended.

INCALCULABLE, *in*, privative, and *calculable*. *INCALCU-*
Lat. *calculus*, a stone; (used in counting.) *LABLE.*

That cannot be *calculated*, counted, reckoned, computed.

They may even in one year of such false policy, do mischiefs *incalculable*; because the trade of a farmer is, as I have before explained, one of the most precarious in its advantages, the most liable to losses, and the least profitable of any that is carried on.

Burke. Works, vol. vii. p. 398. On Scarcity.

INCALE/SCENCE, } Lat. *incalescens*, present
INCALE/SCENCY, } participle of *incalescere*; *in*,
INCALE/SCENT. } and *calescere*, to grow warm;
calere, to be warm.

The growth or growing of warmth; progressive increase of warmth.

But Averroes, a man of his own faith, was of another belief; restraining his ebriety into hilarity, and in effect making no more thereof than Seneca commendeth, and was allowable in Cato; that is, a sober *incalescence* and regulated æstuation from wine.

Sir Thomas Brown. Vulgar Errours, book v. ch. xxi.

If there had not been a provision in the joints against such a preternatural *incalescence* upon their violent motion, this would have made a slothful world, and confined us to leisurely and deliberate movements, when there were the most urgent and hasty occasions to quicken us.

Ray. Of the Creation, part ii.

This inunction is useful, indeed necessary for preserving the ends of the bones from *incalescency*, which they, being solid bodies, would necessarily contract from a swift motion.

Id. Ib. part ix.

The two ingredients were easily mingled, and grew not only sensibly but considerably hot, and that so nimbly, that the *incalescence* sometimes came to its highth in about a minute of an hour by a minute clock.

Boyle. Works, vol. i. p. civ. The Life.

How much a greater interest salts may have in such *incalescencies*, than cold, I have also taken pleasure to try, by pouring acid spirits, and particularly spirit of salt, upon good quick lime.

INCAMP, anciently also, and now more usually, written *Encamp*, *q. v.*

To place or lodge, to fix, to station or form into, *camps*, (or lodgments for an army,) to lodge, or dwell in *camps*.

And the theeues also *incamped* within an arrowe shotte of vs, but they were betwixt vs and the water, which was to our great discomfort.

Hakluyt. Voyages, &c. vol. i. fol. 330. M. Anth. Jenkinson.

When as the legions of the Volsciens under the conduct of Coriolanus Martius *incamped* within five miles of Rome, were they not the matrones of the citie that turned backe this armie, which doubtlesse would have forced our citie and put it to ransacke?

Holland. Livius, fol. 856.

The roving Gaul, to his own bounds restrain'd,
Learns to *incamp* within his native land.

Addison. The Campaign.

There should be some distinction made between the spreading of a victory, a march, or an *incampment*, a Dutch, a Portugal, or a Spanish mail.

For those first simple, that my [the Moon] face did mark
In the full brightness suddenly made dark,
Ere knowledge did the cause thereof disclose,
To be *enchanted* long did me suppose:
With sounding brass and all the while did ply,
The *incantation* thereby to untie.

Drayton. The Man in the Moon.

Fortune-tellers, juglers, geomancers, and the like *incantatory* impostors, though commonly men of inferiour rank, and from whom without illumination they can expect no more then from themselves, do daily and professedly delude them.

Sir Thomas Brown. Vulgar Errours, book i. ch. iii.

Hereupon also are grounded the gross mistakes, in the cure of many diseases; not onely from the last medicine, and sympathetical receipts, but amulets, charmes, and all *incantatory* applications.

Id. Ib. book i. ch. iii.

The Gothic Runers, to gain and establish the credit and admiration of their rhymes, turned the use of them very much to *incantations* and charms.

Sir Wm. Temple. Works, vol. iii. p. 430. Of Poetry.

Medicine was always joined with magick; no remedy was administered without mysterious ceremony and *incantation*.

Burke. Works, vol. x. p. 196. An Abridgement of English History.

INCANTONING, *n.* See CANTON.

The incorporation into *canton*; the formation or constitution of a *canton*.

When the *cantons* of Bern and Zurich proposed, at a general diet, the incorporating Geneva in the number of the *cantons*, the Roman Catholick party, fearing the Protestant interest might receive by it too great a strengthening, proposed at the same time the *incantoning* of Constance, as a counterpoise; to which the Protestants not consenting, the whole project fell to the ground.

Dryden. The Art of Poetry.

This act hurt no man, that was in the present possession of an estate, it only *incapacitated* his next heir to succeed to that estate if he continued a papist.

Burnet. Own Times. Wilham III. Anno 1699.

The third and last shift, is an endless succession of causes and effects, where all the subtilty consists in the word endless; for whatever is *incapable* of being a cause in any time, ever was, and ever will, through eternity, continue equally *incapable*.

Brookes. Universal Beauty, book ii. v. 271. note.

If we consider lavish men carefully, we shall find it always proceeds from a certain *incapacity* of possessing themselves, and finding enjoyment in their own minds.

Spectator, No. 222.

If they suffer this power of arbitrary *incapacitation* to stand, they have utterly perverted every other power of the House of Commons.

Burke. Works, vol. ii. p. 302. On the Cause of the Present Discontents.

Whatever may be objected to the *incapacity* of this Age in other respects, youth is out of question the time for acquiring right propensities and virtuous habits.

INCE'PTOR.

Religion, therefore, seems as ancient as humanity itself, at least of some kind of dress or fashion or other: therefore, if we can arrive at the *inception* of religion, veneration of a deity, and those rites, adorations, and services that result from thence, we have reason to conjecture that the *inception* of mankind was not long before.

INCHKEITH, the Island or *Innis* of the Family of *Keith*, to which it was granted early in the XIth century by Malcom II. for eminent services performed against the Danes at the battle of Barry, in which one Robert killed with his own hand Camus, the King and champion of the enemy. We know not, however, whether the family took the name of the island, or the island that of the family, but Robert Keith was created Hereditary Mareschal of Scotland. At a subsequent date it passed, as part of the dowry of one of the daughters of Robert II., to the Lords of Glamis, afterwards Earls of Strathmore. In the Rebellion of 1715 it was forfeited; and it is now the property of the Duke of Buccleuch.

This small island lies nearly midway in the Frith of Forth, between Leith and Kinghorn, about four miles distant from each, though rather nearer to the coast of Fife. It is about a mile in length, and less than a quarter of a mile in breadth, of an irregular shape, and comprising about seventy acres of surface of rich pasture, or, where under cultivation, of excellent arable land; such at least is the statement of recent Scottish authorities. Johnson, on the contrary, describes it as "nothing more than a rock covered with a thin layer of earth, not wholly bare of grass, and very fertile of thistles." He thought that it never had "afforded to man or beast a permanent habitation," and was forcibly struck by the indolence and want of emulation which rendered a spot of ground so neglected, which lay so near a large Capital, and presented such facility of approach.

Sir R. Sibbald in his *History of the Sheriffdom of Fife*, confirms the opposite account of its fertility. "The soil," he says, "is fat and fertile of grass, which is found to fatten soon the beasts which pasture in it, and upon that account the Butchers ordinarily farm it. The French while they were here, for its fitness to fatten horses, called it *L'Isle des Chevaux*."

The shores are rocky and precipitous, especially on the Eastern and Western sides. Its rocks are of the coal formation, and their stratification appears to be continued with a similar direction, and dip on the shores of Fife.

A sort of Lock Hospital was established at Inchkeith in the reign of James IV. in 1499; and the situation was chosen, probably, from its loneliness and desertion, at a time when the disease for the reception of which it was set apart, "the Grandgere," was believed to be a "contagious plague." For similar reasons, no doubt, the same sagacious Monarch selected it as a fit place for renewing the experiment of Psammetichus relative to the primitive language of mankind, upon which Lindesay of Pitscottie, to whom we are indebted for the account, expresses himself with very becoming hesitation: "And also the King gart take a dumb woman, and put her into Inch Keith, and gave her two young

bairns in company with her, and gart furnish them with all necessaries, that is to say, meat, drink, fire, and clothes, with all other kind of necessaries which are required to man or woman, desiring to understand the language these bairns could speak when they came to lawful age. Some say they spake Good Hebrew; but as to myself I know not but by the author's report." (162. *Ed.* 1778.)

Inchkeith was occupied by the English in 1549, at the request of the Lords of the Congregation, who were anxious to throw off the authority of Mary of Guise, the Queen Dowager. A temporary defence was raised by the garrison, from which, however, their scanty force (four ensignes of Englishmen, and one ensigne of Italians. Holinshed, v. 563. *Ed.* 1808.) was dislodged, after sixteen days' possession, by 6000 French veterans, under the command of M. Desse, assisted by some of the best officers who had been trained in the wars of Francis I. Nevertheless Lindesay of Pitscottie says they "did little good in Scotland, but spent the King of France's money." (p. 307. *Ed.* 1778.) The defence of the English was most gallant and honourable. A strong fort was now erected; but ere long the Scotch became jealous of their auxiliaries, who abandoned the island, and the works were destroyed by an Act of Parliament. Their remains betoken the great labour and expense which were employed in their erection, and in one of the walls the Royal Initials M. R., and a date, 1556, are still to be found. Here, again, Johnson differs widely from the native estimate. The fort, he says, never seems to have been intended as a place of strength, nor was built to endure a siege, but merely to afford cover to a few soldiers, who, perhaps, had the charge of a battery, or were stationed to give signals of approaching danger. He gives the inscription, *Maria Reg.* 1564. Sibbald, however, who is, perhaps, more to be trusted on such a point as this, states the height of the walls, which were of hewn stone, at 19½ feet, their thickness at 9. "The arms of the Queen," he adds, "are seen graven on stone in the wall with this motto *Sa Vertue me attire*."

Of late years the importance of the island to the navigation of the Frith of Forth has led to the erection of a Light-house on the Southern extremity at an elevation of about 180 feet above high-water mark; into this were worked the stones of the old fortress. It was first lighted in 1804. In order to distinguish it from others, it carries a revolving light, and this is so powerful, that although one reflector only is visible at a time, it is distinctly seen at a distance of between five and six leagues.

I'll search where every virtue dwells
 From Courts *inclusive* down to cells.

Swift. *Cadenus and Vanessa*, (1713.)

In the second chapter of that book, [The Wisdom of Solomon] from the first to the twentieth verse *inclusively*, the author elegantly represents the base and vile sentiments of ungodly infidels concerning the life to come.

Bishop Bull, vol. i. p. 208. *Sermon 8.*

Each note *inclusive* melody reveals,
 Soft'ning within th' eternal finger dwells,
 Now sweetly melts, and now sublimely swells.

Brookes. *Universal Beauty*, book ii.

And here permit me to call that language of ours classical English, which is to be found in a few chosen writers *inclusively*, from the times of Spenser till the death of Mr. Pope.

Hart. *Religious Melancholy. Advertisement.*

INCOEXISTENCE, *in, co, existence.* See **COEXISTENCE**. The word appears to have been coined by Locke to suit his particular purpose: as a term opposed to *coexistence*.

Besides this ignorance of the primary qualities of the insensible parts of bodies, on which depend all their secondary qualities, there is yet another and more incurable part of ignorance which sets us more remote from a certain knowledge of the coexistence, or *incoexistence* (if I may so say) of different ideas, in the same subject; and that is, that there is no discoverable connexion between any secondary quality and those primary qualities that it depends on.

Locke. *On Human Understanding*, book iv. ch. iii. sec. 12.

INCOGITANT, Lat. *incogitans*; *in*, privative,
INCOGITANTLY, and *cogitare*, to think, a *cogendo*
INCOGITANCY, *dictum.* See **COGITATE**.
INCOGITABLE, Unthinking, thoughtless, unad-
INCOGITATIVE, vising, inconsiderate.

Incogitable, that cannot be thought of; *incogitative*, that cannot think.

Hee whan wee drawe to deathe, dooeth hys vttermoste deuoyre to brynge vs to damnacion: neuer ceasyng to mynyster by subtylle and *incogitable* meanes, firste vnlawfull longyng to lyue, horroure to goe gladly to God at his callyng.

Sir Thomas More. *Workes*, fol. 78. *A Treatyce vpon Woordes of Scripture.*

'Tis folly and *incogitancy* to argue any thing one way or the other from the designs of a sort of beings, with whom we so little communicate.
 Glanvil. *On Witchcraft*, p. 41.

Does this law attain to no good end? The bar will blush at this most *incogitant* woodcock.

Milton. *Workes*, vol. i. fol. 307. *The Doctrine and Discipline of Divorce.*

The height of the mercurial cylinder is not wont to be found altogether so great as really it might prove, by reason of the negligence or *incogitancy* of the most that make the experiment.

Boyle. *Workes*, vol. i. p. 38. *New Experiments, &c. touching the Spring of the Air.*

I did not *incogitantly* speak of irregularities, as if they might sometimes be but seeming ones.

Id. *Ib.* vol. v. p. 217. *A Free Inquiry into the received Notion of Nature.*

§ 9. There are but two sorts of beings in the world, that man knows or conceives.

First. Such as are purely material, without sense, perception, or thought, as the clippings of our beards, and paring of our nails.

Secondly. Sensible, thinking, perceiving beings, such as we find ourselves to be, which if you please, we will hereafter call *cogitative* and *incogitative* beings; which to our present purpose, if for nothing else, are, perhaps, better terms than material and immaterial.

Locke. *On Human Understanding*, book iv. ch. x. sec. 9.

From my using the word mere Matter, he concludes that I imagine there is another sort of Matter, which is not a mere, bare, pure, *incogitative* Matter.

 rambling, inconsequential, incongruous, inconsistent,
 unsuited, disagreeing.

What can be a fouler incongruity, a greater violence to the reverend secret of nature, than to force a mixture of minds that cannot unite, and to sow the sorrow of man's nativity with seed of two *incoherent* and *incombining* dispositions.

Milton. *Workes*, vol. i. fol. 108. *The Doctrine and Discipline of Divorce.*

Besides the *incoherence* of such a doctrine, cannot, must not be thus interrupted.

Id. *Ib.* vol. i. fol. 185.

This powder, when it is poured out, will emulate a liquor, by reason that the smallness and *incoherence* of the parts do make them easy to be put into motion, and make the pores they intercept so small, that they seem not at a distance to interrupt the unity or continuity of the mass or body.

Boyle. *Works*, vol. i. p. 388. *The History of Fluidity*.

They charge all their crude *incoherencies*, saucy familiarities with God, and nauseous tautologies, upon the Spirit prompting such things upon them.

South. *Sermons*, vol. iv. p. 48.

But this historian of men and manners goes on in the same rambling *incoherent* manner, and so he can but discredit the Jewish history he cares little for the rest.

Warburton. *Works*, vol. iv. p. 389. *The Divine Legation*, notes, book v. (x.) p. 132.

In the language of passion too, which the poet must sometimes imitate, we do not expect great perspicuity; it being the nature of violent passion to unsettle the mind and make men speak *incoherently*.

Beattie. *Moral Science*, part iv. ch. i. sec. 3.

Without *condition*; unlimited, unrestricted; *sc.* by any terms, imposed, exacted, or required; by any terms of covenant or agreement.

From that which is but true in a qualified sense, an *inconditional* and absolute variety is inferred.

Sir Thomas Brown. *Vulgar Errours*.

Perhaps I need not mind you, Lindamor, that divers passages of the foregoing discourse suppose the truth of their doctrine, who ascribe to God, in relation to every man, an eternal, unchangeable, and *inconditionate* decree of election, or reprobation.

INCONFORMITY, also written *Unconformity*, *q. v.*; *in*, privative, and *conformity*. See **CONFORM**. Lat. *conformare*, (*con*, and *formare*), *q. eandem formam rei alicui imponere*. Minshew.

Want of *conformity*; want of adaptation to, or compliance with, (a set *form* of words, or actions.)

Neither did he, I believe, ever endeavour for it, knowing his own *inconformity*.

Strype. *Life of Parker*. Anno 1573.

Contrary to the dictates of his own reason, and the checks of his own conscience, he goes on to put wicked intentions into act, and to fulfil his own will notwithstanding the apparent *inconformity* thereof to the will of God.

Not mixed, mingled, or blended; unmixed, unmingled; consequentially, distinct; clear.

So that all the curious diversitie of articulate sounds of the voice of man, or birds, will enter into a small crany, *inconfused*.

Bacon. *Natural History*, Cent. ii. sec. 192.

But the cause of the confusion in sounds, and the *inconfusion* in species visible, is, for that the sight worketh in right lines, and maketh several cones; and so there can be no coincidence in the eye, or visuelle point: but sounds that move in oblique and arcuate lines, must needs encounter, and disturb the one the other.

Id. *Ib.* Cent. iii. sec. 225.

INCONFUTABLY, see to **CONFUTE**, which signifies, metaphorically, to abate the force of argument, to show or prove its weakness, its fallacy. Hence *inconfutably*.

Unanswerably.

The writings of the fathers were vast and voluminous, full of controversy, and ambiguous senses, fitted to their own times and questions, full of proper opinions and such variety of sayings, that both sides eternally and *inconfutably* shall bring sayings for themselves respectively.

Taylor. *Polemical Discourses*, fol. 286. *A Dissuasive from Popery*, ch. i. sec. 1.

INCONGELABLE, Fr. *incongelable*. See **CONGEAL**. Lat. *congelare*, to bind together by frost: (*con*, and *gelare*, to freeze.)

Not to be bound together by frost.

This train oil, swimming upon the surface of the water, and being *incongealable* by the cold, protects the subjacent water from the freezing violence of the cold, and keeps the moats unpassable.

Boyle. *Works*, vol. ii. p. 517. *Experimental History of Cold*, tit. iii.

Not able to endure the Spencers' hateful pride,
The father and the son, whose counsels then did guide
Th' *inconsiderate* king.

Drayton. Poly-olbion, song 22.

And being *inconsiderately* proud,
Held all things vile that suited not my vein.

Id. The Legend of Pierce Gaveston.

Their *inconsideratenesse* therefore brands their bretheren with crimes whereof they were innocent.

Hall. Works, vol. i. fol. 939. *Contemplations. The Altar of the Ruebenites.*

But Peter followed afarre off; and the greatnesse of John's love, when he had mastered the first *inconsiderations* of his fear, made him to return a while after into the high priest's hall.

Taylor. The Great Exemplar, part iii. sec. 15. p. 469.

You are poor rogues, you cry, the baser scum
And *inconsiderable* dregs of Rome;
Who know not from what corner of the earth
The obscure wretch, who got you, stole his birth.

Stepney. Juvenal. Satire 8.

To speak truth, the multitude of those who stile themselves secre- taries to the king, is such, that what with the greatness of their number, and *inconsiderableness* of most of their persons, the dignity of the charge is extremely eclipsed.

Evelyn. Miscellaneous Writings, p. 61. *The State of France.*

The best judges were of opinion, that if a favorable conjuncture should happen, they would be as ready to shake off the yoke, as they had been foolish and *inconsiderate* in putting it on.

Ludlow. Memorials, vol. iii. p. 97.

When he still found her [Mariamne] cold and incredulous he *inconsiderately* told her, as a certain instance of her lord's [Herod's] affection, the private orders he had left behind him, which plainly showed, according to Joseph's interpretation, that he could neither live nor die without her.

Spectator, No. 171.

Secondly, that the sins he is guilty of are not gross, willful, deli- berate crimes; but rather the effects of *inconsideration*, or surprize, or a sudden temptation.

Sharpe. Works, vol. iii. p. 153. *Sermon 8.*

Let him calmly reflect, that within the narrow boundaries of that country to which he belongs, and during that small portion of time which his life fills up, his reputation, great as he may fancy it to be, occupies no more than an *inconsiderable* corner.

Blair. Sermon 6, vol. ii. p. 115.

When its [life] changes warn the most *inconsiderate*, that what is so mutable will soon pass entirely away; then with pungent earnest- ness comes home that question to the heart, into what world are we next to go.

Id. Ib. Sermon 2, vol. i. p. 32.

I return briefly, that if it be confest to be so correspondent to, and inferrible from one attribute, and cannot be prov'd *inconsistent* with another, my businesse is determin'd. Therefore let those that pretend an *inconsistence* prove it.

Glanvil. *The Preexistence of Souls*, ch. vii.

No contradictionous *inconsistentness*.

More. *Song of the Soul*, *Infin*. st. 49.

How much of other each [blessing] is sure to cost,
How much for other oft is wholly lost.
How *inconsistent* greater goods with these;
How sometimes life is risqu'd, and always ease.

Pope. *Essay on Man*, epis. iv. l. 272.

Farce is that in Poetry, which Grotesque is in Picture. The persons and actions of a Farce are all unnatural, and the manners false; that is, *inconsistent* with the characters of mankind.

Dryden. *Prose Works*, vol. iii. p. 317. *A Parallel of Poetry and Painting*.

And yet, what is strange, these very men, with more of your own nation, the Chillingworths, the Spencers, the Cudworths, the Tillotsons, are honoured in other parts of his book, and recommended as free-thinkers. What *inconsistence* is this.

Bentley. *Remarks of Free-thinking*, p. 12.

Though this book were written in several ages and places, by several persons; yet doth the doctrine of it accord together with a most excellent harmony, without any dissonance or *inconsistency*.

Wilkins. *Natural Religion*, book ii. ch. ix. p. 348.

As this is the only crime in which your leading politicians could have acted *inconsistently*, I conclude that there is no sort of ground for these horrid insinuations.

Burke. *Works*, vol. v. p. 162. *On the Revolution in France*.

You still approve some absent place
The present's ever in disgrace,
And such your special *inconsistence*,
Make the chief merit in the distance.

Cambridge. *A Dialogue*. Horace, book ii. sat. 7.

If we should suppose him to have been an impostor and a false prophet, a character would arise full of such contradiction and *inconsistency*, of such prudence and folly, of such knowledge and ignorance, of such goodness and wickedness, as never appeared in the world before or since.

INCO'NSOLATELY. } It. *inconsolabile*; Lat. *inconsolabilis*. See **CONSOLE**. Lat. *consolare*, to console, or soothe by converse the minds or feelings of the solitary
That cannot be *consoled*, soothed or comforted.

Blacklock accentuates the second syllable of *Incónsolable*.

Rejoyce in this, and rejoyce in nothing but this crosse; not in your transitory honors, titles, treasures, which will at the last leave you *inconsolately* sorrowfull; but in this crosse of Christ; whereby the world is crucified to you, and you to the world.

Hall. *Works*, vol. ii. fol. 324. *Sermon Preached to his Majesty, Galatians*, ch. ii. v. 20.

Oh, my friend, judge what I endured, terrified with dreams, tormented by my apprehensions. I abandoned myself to despair, and remained *inconsolable*.

Dryden. *Prose Works*, vol. i. p. 409. *The Life*. Letter from Lady Elizabeth Dryden.

Falconer. *Occasional Elegy*.

INCONSONANT, *in*, privative, and *consonant*, q. v. Lat. *consonans*, present participle of *consonare*, to sound together, or in unison, (*con*, and *sonare*, to sound.)

Discordant, disagreeing, inconsistent with.

That they carried them out of the world with their feet forward, not *inconsonant* unto reason.

Sir Thomas Brown. *Urn Burial*, ch. iv.

And as his supposition of these semina, thus casually produc'd, seems *inconsonant* both to reason and course of nature, so his supposition of the manner of the generation, and production, and nourishment of this foetus, seems a fiction utterly *inconsonant* to the whole method of nature, in relation to mankind.

That may not be seen; not visible, discernible, or distinguishable.

The like holds with regard to the human soul, whose affection towards the individuals of the same species, who are distantly related to it, is rendered *inconspicuous* by a more powerful attraction towards those who have a nearer relation to it.

Guardian, No. 126.

The few particles of the air (whilst they sustain the pressure of all the incumbent atmosphere) *inconspicuously* lurk within the bladder.

Boyle. *Works*, vol. i. p. 180. *An Explication of Rarefaction*.

The air let in, in the Torricellian experiment, reduces the air in the bladder to its former *inconspicuousness*.

Id. *Ib.* p. 181.

That the milky-way, though consisting of innumerable stars, should for two thousand years pass for a meteor, the *inconspicuousness* of those stars keeps me from much admiring.

Id. *Ib.* vol. iii. p. 472. *Of Men's great Ignorance*.

Socrates in Xenophon has the same sentiment, and says that the Deity is *inconspicuous*, and that a man cannot look upon the sun without being dazzled.

Cowley. *The Monopoly*.

Success on Mævins always does attend;
Inconstant Fortune is his constant friend;
He levels blindly, yet the mark does hit;
And owes the victory to chance, not wit.
Pomfret. *The Fortunate Complaint*.

I had told him, upon the negotiation of our last alliance and his suspicions of our *inconstancy* in England, what I truly thought of the dispositions and intentions both of his majesty and his ministers.
Sir Wm. Temple. *Works*, vol. i. p. 43. *Letter to my Lord Keeper*, April 24, 1669.

While we, inquiring phantoms of a day,

INCONSUMABLE, } Fr. *inconsumptible*, in,
INCONSUMPTIBLE. } privative, and *consume*, *q. v.*;
Lat. *consum-ere*, (*con*, and *sumere*, *i. e. sub-emere*),
totum sumere, to take the whole, leave nothing.

That cannot be reduced to nothing; that cannot be devoured, wasted, or destroyed; indestructible.

Whereof [asbestos] by art were weaved napkins, shirts, and coats *inconsumable* by fire.

Sir Thomas Brown. *Vulgar Errours*, book iii. ch. xiv.

Before I engage myself in giving any particular answer to this objection of pretended *inconsumptible* lights, I would gladly see the effect certainly averred and undoubtedly proved.

Digby. *Of Bodies*, ch. viii.

When the identical loan is to be returned, as a book, a horse, a harpsichord, it is called *inconsumable*, in opposition to corn, wine, money, and those things which perish, or are parted with in the use, and can therefore only be restored in kind.

Paley. *Moral Philosophy*, book i. ch. v. p. 156.

INCONSUMMATE, *in*, and *consummate*, *q. v.*;
Lat. *con*, and *summus*, highest.

Not having reached the top or *summit*; the highest point aimed at; incomplete, imperfect, unfinished.

There is great diversity of opinions among learned men, how far the privilege of an ambassador exempts him from penal prosecution for such conspiracies and *inconsummate* attempts.

Hale. *History of Pleas of the Crown*, ch. xiii.

INCONTAMINATE, Fr. *incontaminé*, *in*, privative, and *contaminate*; *q. v.* Lat. *contaminare*, *atum*, to defile.

Undefined, unpolluted, unstained, inviolate.

Being [as you are] free and *incontaminate*, well borne, and abhorring to dishonour or enrich y^e selfe with spoyle which by others have been ravish't from our miserable, yet dearest country.

Evelyn. *Memoirs*, vol. i. p. 666. *Letter to Colonel Morley*.

to witness together; (*con*, and *testari*, to witness.)
To bring *witnesses* on each side together; to try by
witnesses; and thence, to *contest* is, simply, to contend,
to dispute; and *incontestable*,

That cannot be contended, disputed, debated, litigated; indisputable.

I think we may lay this down as an *incontested* principle, that chance never acts in perpetual uniformity and consistence with itself.
Spectator, No. 543.

Wherein I doubt not but from self-evident propositions, by necessary consequences, as *incontestable* as those in mathematicks, the measures of right and wrong might be made out to any one that will apply himself with the same indifferency and attention to the one, as he does to the other of these sciences.

Locke. *Works*. *Of Human Understanding*, book iv. ch. iii. sec. 18.

The Pastor of Hermas is *incontestably* a most antient Work, being cited by almost all the primitive Fathers extant, that lived in or near the second century.

Clarke. *Works*, vol. iii. fol. 919. *On part of a Book called Amyntor*, &c.

What opinion soever these persons may have of their own understandings, they will scarce be able to convince a reasonable man that this evidence is not conclusive, and even *incontestable*, if they will but place it in a fair and just light.

Hurd. *Works*, vol. vi. p. 266. *Sermon* 18.

As the design of Tragedy is to instruct by moving the passions, it must always have a hero, a personage apparently and *incontestably* superior to the rest, upon whom the attention may be fixed and the anxiety suspended.

Johnson. *The Rambler*, No. 156.

INCONTINENTLY, } *continens*; *in*, and *conti-*
INCONTINENCE, } *nens*, present participle of
INCONTINENCY. } *continere*, to hold toge-

ther; (*con*, and *tenere*, to hold.)

Not holding or keeping within or together; within due bounds, in subjection or subservience; intemperate, immoderate, unchaste. In our old writers applied to time: without check, stop, or stay; and, as Cotgrave says, "instantly, immediately, presently, suddenly, forthwith, out of hand, as soon as may be."

And it is a great dishonesty and shame to be rebuked or spoken to, by any of them, for dissolute and *incontinent* living.

More. *Utopia*, book ii. ch. xi. *Of Religion*.

I dye, though not *incontinent*;

their territories. *Holland. Plutarch, fol. 124. Camillus.*

As thus they scan the visionary scene,
On all sides swelles the superstitious din,
Incontinent; and busy frenzy talks
Of blood and battle.

Thomson. Winter.

It is undoubtedly that [speech] of the nymph Echenais, the mis-
tress of Daphnis, upbraiding him for his *incontinent* passion; for he
had been guilty of a breach of promise to her, and had offended her
by following other women.

Fawkes. Theocritus, idyl. i. (note, 107.)

He was immediately taken up, and the next day, at eight o'clock in
the morning, set on the pillory, and both his ears cut off, an herald
present, and trumpet blowing; and *incontinently* he was taken down,
and carried to the Counter.

Strype. Memorials. Queen Mary, Anno 1553.

Where was the crime, if pleasure I procur'd,
Young, and a woman, and to bliss inur'd!
That was my case, and this is my defence,
I pleas'd myself, I shunn'd *incontinence*.

Dryden. Sigismonda and Guiscardo.

This Dr. London, for his *incontinency*, afterwards did open penance
in Oxford, having two smocks on his shoulders, for Mrs. Thykked and
Mrs. Jennyrigs, the mother and the daughter.

Strype. Memorials. Henry VIII. Anno 1548.

Such London is, by taste and wealth proclaim'd
The fairest Capital of all the world,
By riot and *incontinence* the worst.

Cowper. The Task, book i.

INCONTRACTED, *in*, privative, and *contract*;
Lat. *contractum*, past participle of *contrahere*, to draw
together.

Not drawn together, not drawn into a narrower
space; not shortened, abridged, or curtailed.

This dialect uses the *incontracted* termination both in nouns and
verbs. *Blackwall. Sacred Classics, book i. p. 228.*

INCONTRO'LLABLE, } More commonly written

That cannot be checked or restrained; resisted or
opposed.

However, therefore, these were delivered by the Evangelist, and
carry (no doubt) an *incontrollable* conformity into the intention of
his delivery: yet are they not applicable unto precise numerality,
nor strictly to be drawn into the rigid test of numbers.

Sir Thomas Brown. Vulgar Errours, book iv. ch. xii.

Solyman, Amurath, and others, challenged absolute, irresistible,
incontrollable power to set up, pull down, order, alter, and dispose
the world, and all things in the world, at pleasure.

Mountague. Appeale to Cæsar, ch. v. fol. 153.

That cannot be disputed or debated; indisputable,
inconfutable.

The thing itself whereon the opinion dependeth, that is, the variety
of the flux and the reflux of Euripus, or whether the same do ebbe
and flow seven times a day, is not *incontroversible*.

Sir Thomas Brown. Vulgar Errours, book vii. ch. xxiii.

For the Hebrew; it is *incontrovertibly* the primitive and surest text

been used the highest caution humanity could invent.

Id. Ib. book vi. ch. i.

This, therefore, may be assumed as an *incontrovertible* principle,
that the difference of good and evil in actions is not founded on
arbitrary opinions or institutions, but in the nature of things, and the
nature of man; and accords with the universal sense of the human
kind.

Blair. Sermon 20. vol. v. p. 318.

Both which letters, though they did not arrive until after the actual
signature of the said Colonel Champion, do yet *incontrovertibly*

Hall. Works, vol. iii. fol. 1008. Mourners in Sion.

The rites and ceremonies, 'tis apparent, had no intrinsic nor moral holiness in them; no natural tendency to promote the happiness of men; nay, rather they were *inconvenient* and grievous, a yoke of bondage and servile discipline, which none were able to bear.

Bentley. Sermon 9. p. 380.

As it was next invested, it lay so *inconveniently* between Flanders and Brabant, that it was necessary to clear that communication, and to deliver Brussels from the danger of that neighbourhood.

Burnet. Own Times. Queen Anne, Anno 1706.

He only is like to endure austerities, who has already found the *inconvenience* of pleasures.

Dryden. Dedication to the Georgics.

Possibly that case in Henry VII. may prove, that if the king should in his passion kill a man, this shall not be felony to take away the king's life; for the *inconvenience* may be greater to the people, by putting a king to death for one offence and miscarriage, than the execution of justice upon him can advantage them.

Ludlow. Memoirs, vol. iii. p. 348. King Charles's Case.

The monarchick, and aristocratical, and popular partisans have been jointly laying their axes to the root of all government, and have in their turns proved each other absurd and *inconvenient*.

Burke. Works, vol. i. p. 54. A Vindication of Natural Society.

The only question is how far the members of these societies may take upon themselves to judge of the *inconvenience* of any particular direction, and make that a reason for laying aside the observation of it.

convincible. See TO CONVINCE. Lat. *convincere, to*
conquer, sc. in argument.

That cannot be conquered or subdued, sc. by argument; cannot be forced, sc. to receive an opinion, or to relinquish one.

Yet is it not much lesse injurious unto knowledge obstinately and *inconvincedly* to side with any one.

Sir Thomas Brown. Vulgar Errors, book i. ch. vii.

None are so *inconvincible* as your half-witted people.

Government of the Tongue, p. 195.

INCONY. Mr. Steevens observes that *cony* and *incony* have the same meaning. *Conny*, Mr. Grose says, is brave, fine, the same as *canny*, a word in Scotland very variously applied, see Jamieson; but plainly our English word *cunning*, i. e. knowing, clever. Mr. Steevens produces several examples of this word, and Archdeacon Nares adds to them.

O my troth most sweete iestes, most *inconie* vulgar wit,
When it comes so smoothly off.

Shakspeare. Love's Labour Lost, fol. 131.

INCORNISHED, having cornices. See CORNICE.
The brow of a wall, pillar, or other piece of building.

The outer walls of the house are incrustated with excellent antique basse-relievos of the same marble, *incornish'd* with festoons and nitches set with statues from the foundation to the roof.

to mix or blend, to unite or conjoin, intimately, closely together.

Incorporeal; Fr. *incorporel*; It. *incorporale*; Sp. *incorporal*; Lat. *incorporalis*; in, privative, and *corporalis*, from *corpus*, body;

Bodiless; without *body* or matter, immaterial; consequently, spiritual.

Shakspeare uses *incorpse* as equivalent to *incorporate*.

The soule of man hath his end and terme & spiritual alteration, *incorporall*, to be regenerate the sonne of God.

Stephen, Bishop of Wynchester. Of Transubstantiation, fol. 109.

So sone as I had eaten it (sayth Saynt Johan) so soon as I had *incorporate* it in my mynde, and roted it in my soule, my belly was bytter, my hart was greaved much to se theuils of the worlde, my spyrite was trubled to se the abusyons of men, and much I pitied the losse of their soules.

Bale. Image, part i. sig. T. 7.

The said felowship, company, society & corporation made or created by the said letters patents, shal at al time & times from henseforth be *incorporated*, named and called onely by the name of the felowship of English merchants, for discouery of new trades.

Hakluyt. Voyages, &c. vol. i. fol. 370. *The Queene's Acte.*

Golden Boke, sig. H.

For the meane while in thys worlde, bodyly to receiue and eat hys owne blessed body into theirs, as an earnest peny of their perpetual conuincciō and *incorporacion* with him afterward.

Sir Thomas More. Workes, fol. 1045. The Answer to the Poysoned Booke.

God is an universall spirit or mind: matter is the first and principal subject of generation and corruption: idea, an *incorporall* substance, resting in the thoughts and cogitations of God; which God is the general soule and intelligence of the world.

Holland. Plutarch, fol. 662.

He never suffers wrong so long to grow,
And to *incorporate* with right so far,
As it might come to seem the same in show,
(To encourage those that evil minded are
By such success.)

Daniel. History of Civil Wars, book v.

To the end that, beeing thus soaked and softened, it might bee well mixed and *incorporated*, yea and resolved (as it were) into a kind of paste.

Item. That they should abolish the lawes, ordinances and customes of Lycurgus, and frame themselves to live after the fashions and manners of the Achæans, for they so should be *incorporate* into one civile bodie, and better accord and sort together in all things.
Id. Livius, fol. 1003.

By this means he first took away all faction, that neither side said, nor thought any more, those are Sabyns, these are Romans, these are of Tatiush, these are of Romulus. Insomuch as this division was an *incorporating*, and an uniting of the whole together.
Sir Thomas North. Plutarch, fol. 59. Numa.

It shall likewise have a general and total connexion, even a mixion and *incorporation*.
Holland. Plutarch, fol. 903.

— And both contain

Tasting concoct, digest, assimilate,
And corporeal to *incorporeal* turn.

Milton. Paradise Lost, book v. l. 413.

The cause is, for that the sense of hearing striketh the spirits more immediately than the other senses; and more *incorporeally* than the smelling.

Bacon. Natural History, Cent. ii. sec. 124.

So in like manner did all the other ancient atomists generally before Democritus, joyn theology and *incorporealism* with their atomical physiology.

Cudworth. Intellectual System, book i. ch. i. sec. 26.

We have made it evident that those atomick physiologies, that were before Democritus and Leucippus, were all of them *incorporealists*; joyning theology and pneumatology, the doctrine of *incorporeal* substance and a Deity together with their atomick physiology.

INCREMABLE, *in*, privative, and *cremare*, to burn. Sir Thomas Brown uses also *cremation*, *q. v.*

Not to be burned, not consumable by fire.

But their insatisfaction herein began that remarkable invention in the funeral pyres of some princes, by incombustible sheets made with a texture of asbestos, *incredmable* flax, or salamander's wool, which preserved their bones and ashes incommixed.

Sir Thomas Brown. Urn Burial, ch. iii. p. 16.

INCREMENT, *Fr. increment*; *It. and Sp. incremento*; *Lat. incrementum*, from *increscere*, to grow or increase, *q. v.*

Growth or increase; in magnitude or number.

The same meekness and charity should be preserved in the promotion of Christianity, that gave it foundation, and *increment*, and firmness in its first publication.

Grainger. The Sugar Cane, book iv. l. 248.

INCREPATION, *Fr. increpation*; *Lat. increpitare*, frequentative of *increpare*, to make a noise, (*in*, and *crepare*.)

To make a noise at, angrily, chidingly; and thus to chide, rebuke, or reprove.

For when they desired to know the time of his restoring their kingdom who were of his own house, his answer was a kinde of soft *increpation* to them, and a strong instruction to all times.

INCUBUS.

INCUBATION, Lat. *incubatio*, from *incubare*, to lie upon, to sit upon, as a hen upon eggs, (*in*, and *cubare*, to lie.)

Lying upon, sitting upon, (as a hen upon eggs;) brooding.

How causeless their fear was herein, the daily *incubation* of ducks, peahens, and many other testifie.

INCUBE, used metaphorically by Milton as equivalent to

To infix herself, *q. d. cubically*; *i. e.* in a firm and solid manner.

So that Prelaty, if she will seek to close up divisions in the Church, must be forc'd to dissolve and unmake her own pyramidal figure, which she affirms to be of such uniting power, when as indeed it is the most dividing and schismatical form that Geometricians know of, and must be fain to inglobe or *incube* herself among the Presbyters.

INCUBUS, Lat. *incubus*, *q. d. qui incubat*; who lies upon; a Spirit to whom was ascribed the oppression known by the vulgar name of Nightmare.

Wymen may now go safely up and downe,
In every bush, and under every tre,
There n' is none other *incubus* but he,
And he will den them no dishonour.

St. Augustin.

For sufficiently obvious reasons we are not about to enter too closely into details of the history and adventures of INCUBI, those veriest children, or brethren of Belial, who profited by the Fall. Time was, nevertheless, when the Student, whether in Theology, Physics, or Metaphysics, who should have denied their dangerous existence and fantastic power, would have been deemed in league with, or under the possession of the Prince of Darkness. St. Augustin, who credited many more wonders than ordinary Philosophy has ever dreamed of, speaks with confidence on this point. *Quoniam creberrima fama est, multique se expertos, vel ab eis qui experti essent, de quorum fide dubitandum non est, audisse confirmant, Sylvanos, Panes, et Faunos, quos vulgè Incubos vocant, improbos sæpe extitisse mulieribus, et earum appetisse ac peregrisse concubitum; et quosdam Dæmones, quos Dusios Galli nuncupant, hanc assidue immunditiam et tentare et efficere, plures talesque asseverant, ut hoc negare impudentia videatur.* (*De civ. Dei*, xv. 23.) The Schoolmen at large follow in the train of the good Father; and Thomas Aquinas, Bonaventura, Duns Scotus, and Durand, among others, have exhausted subtilty in speculating upon the operations of such Spirits.

Similar belief of the Ancients.

The similar classical superstition was clothed in a more pleasing form than that which the moderns have thrown over it in connection with their Dæmonology. The Platonists abound in varieties of this belief, and one

of them gave birth to the fabled intercourse of the pious Numa with Egeria. Plutarch, in treating upon the divine reveries of the Roman King, has a singular remark upon the Egyptian creed, which seems to have inclined much more to the corporeality of Baalim than that of Ashtaroth. *Καίτοι δοκοῦσιν οὐκ ἀπιθάνως Αἰγύπτιοι διαίρειν, ὡς γυναικὶ μὲν οὐκ ἀδύνατον πνεῦμα πλησιάζει θεοῦ, καὶ τινες ἐντεκεῖν ἀρχὰς γενέσεως, ἀνδρὶ δὲ οὐκ ἔστι σύμμιξις πρὸς θεὸν οὐδὲ ὁμιλία σώματος.*

For modern instances, which differ very widely from the chaste converse of Numa with his wedded Goddess, we can do little more than refer to the pages in which they may be found; and the very names of the writers will sufficiently avouch their credibility. The History of Hector Boethius has three or four veritable examples, which obtain confirmation from the pen of Cardan. One of these we may venture to transcribe in the quaint dress which Holinshed has given it. "In the yeare 1480 it chanced as a Scottish ship departed out of the Forth towards Flanders, there arose a woonderful great tempest of wind and weather, so outrageous, that the maister of the ship with other the mariners woondered not a little what the matter ment, to see such weather at that time of the yeere, for it was about the middest of summer. At length when the furious pirrie and rage of winds still increased, in such wise that all those within the ship looked for present death, there was a woman underneath the hatches called unto them above, and willed them to throw her into the sea, that all the residue, by God's grace, might yet be saved; and thereupon told them how she had been hanted a long time with a Spirit dailie comming unto hir in man's likeness. In the ship there chanced also to be a Priest, who by the maister's appointment going downe to this woman, and finding hir like a most wretched and desperate person, lamenting hir great misfortune and miserable estate, used such wholesome admonition and comfortable advertisements, willing hir to repent and hope for mercy at the hands of God, that at length, she seeming right penitent for her grievous offences committed, and fetching sundrie sighs even from the bottome of her heart, being witnessse (as should appeare) of the same, there issued foorth of the pumpe of the ship a foule and evill-favored blacke cloud, with a mightie terrible noise, flame, smoke, and stinke, which presently fell into the sea. And suddenlie thereupon the tempest ceased, and the ship passing in great quiet the residue of her journey, arrived in safetie at the

INCUBUS. place whither she was bound." (*Chronicles*, vol. v. 146. Ed. 1808.) In another case related by the same author the Incubus did not depart so quietly. In the chamber of a young gentlewoman, of excellent beauty, and daughter of a nobleman in the country of Mar, was found at an unseasonable hour "a foule monstrous thing verie horrible to behold," for the love of which *Deformed*, nevertheless, the Lady had refused sundry wealthy marriages. A Priest who was in the company began to repeat St. John's Gospel, and ere he had proceeded far, "suddenlie the wicked Spirit making a verie sore and terrible roaring noise, flue his waies, taking the rooffe of the chamber awaie with him, the hangings and coverings of the bed being also burnt therewith." (*Id. Ib.*)

Lipsius.

Bodinus.

Erastus, in his *Tract de Lamiis*, Sprangerus, who assures us that himself and his four colleagues punished many old women of Ratisbon with death for this commerce, Zanchius, *de Operibus Dei*, (xvi. 4.) Dandinus, in *Aristotelis de Animâ*, (ii. 29, 30.) Reussus, (v. 6.) Godelman, (ii. 5.) Valesius, *de Sacra Phil.* (40.) and Delrio, (*passim*), among others, will satiate the keenest curiosity on these points. A writer of more learning, and, for the most part, of greater judgment, than any of the above-named worthies, has left his testimony also to the abundance of such equivocal *amourettes* which filled the Scandalous Chronicle of his own time. Lipsius, in commenting upon some passages in the *Quæstiones Convivales* (viii. 1.) of Plutarch, and the account of Numa, to which we have before referred, observes, *Ista ille vir satis scitè; non ultrâ a me scrutanda aut protrahenda, quia aut fæda omnia aut tenebrosa. Unum dixero, non opinari me, ullo retro ævo, tantam copiam Saltyrorum et salacium istorum Geniorum se ostendisse, quantam nunc cottidianæ narrationes, et iudiciales imò sententiæ proferunt: quo infelicis sæculi fato.* (*Physiol. Stoic.* i. 20.) This complaint was written towards the close of the XVIth century, when Bodinus and others had published their fearful Catalogues of Dæmoniack intrigues. From the writer just named (*de Magorum Dæmonomaniâ*, ii. 7.) we learn that Joan Hervilleria, at twelve years of age, was solemnly betrothed to Beelzebub by her mother, who was afterwards burned alive for compassing this clandestine marriage. The Bridegroom was very respectably attired: *specie hominis atri, amictu atro, ocreis et calcaribus instructi, gladio accincti, equum nigrum habentis præ foribus*; and the marriage formulary was as simple as that used by our Scottish neighbours. The mother pronounced the following words to the Bridegroom: *Ecce filiam meam quam spondi tibi*, and then turning to the Bride, *Ecce amicum tuum qui beabit te*. It appears, however, that Joan was not satisfied with her Spiritual husband alone, but became a bigamist, by intermarrying with real flesh and blood. Besides this Lady, we read of Margaret Bremont, who, in company with her mother, *inter femora scopam habentem*, Joan Robert, Joan Guillemin, Mary, wife of Simon Agnus, and Wilhelma, spouse of one Grassus, *cum suis scopis singulas*, were in the habit of attending Diabolic assignations. These unhappy wretches were burned alive by Adrian Ferreus, (aptly so named,) General Vicar of the Inquisition. Magdalena Crucia of Cordova, an Abbess, was more fortunate. In 1545 she became suspected by her Nuns of Magic, an accusation very convenient when a Superior was at all troublesome. She encountered them with great wisdom by antici-

pating their charge; and going beforehand to the Pope, Paul III., she confessed a thirty years' intimate acquaintance with the Devil, *qui Mauri nigri præ se ferebat speciem*, and obtained her pardon. The foul fiends occasionally were sentimental, and wafted their sighs by correspondence. Gertrude, a young Nun in the Convent of Nazareth, in the Diocese of Cologne, scarcely fourteen years of age, informed her sisterhood of the familiar visits of a Satanic Lover. Curiosity, or some other equally strong motive, prompted them to inquire further; and each in turn was provided with a like squire of dames; *cujus rei periculum facere volentes ceteras a Spiritibus malignis fuisse occupatas*. On opening Gertrude's cabinet, much phlogistic correspondence was discovered addressed to unhallowed suitors. *Joannes Wierus qui historiam scripsit, ait, se præsentem multisque claris viris, in eo Monasterio, anno MDLXV, amatorias literas ad Dæmonem scriptas in Gertrudis cistâ repertas esse.*

Wierus.

Wierus, whom we have just mentioned, notwithstanding his almost general rejection of the *aniles fabulæ* concerning witchcraft, occasionally, it must be confessed, brings forward odd stories. It is but just to him, however, that, after citing the above passage from one of his most vehement opponents, we should give him an opportunity of expressing in his own words his opinion of Incubi. In his *Treatise de Præstigiis Dæmonum*, &c. he has an express Chapter (iii. 19.) *de Incubi Dæmoniaci illusionem et Incubo morbo naturali*, in which he explicitly resolves the former into the latter; and maintains that the *ἐφιάλης* of Aristotle, the *πνιγάλιον* of Themiso, the *Faunus* of Pliny, the *albedilon* and *alcratum* of Avicenna, the *elgadum* of Averroes, the *alcaibum* of Azaravius, and *die mar rydet uns* of his own countrymen are nothing more than our English *Nightmare*, a sort of *epilepsia deminuta*. He adds moreover a good reason why Witches are more subject to those attacks than other persons. *Contingit aut potissimum resupino corpore jacente, plerumque ore ventriculi aut pituitâ crassâ lentâque, aut ciborum concoctu difficilium copiâ oppresso. Quum vero sagæ sint, ob sexum et ætatem, ut plurimum pituitosæ, et ob animi affectus melancholicæ, cur non supinæ cubantes hujusmodi morbo erunt obnoxie?* He then concludes with a story taken from Jason Pratensis, (*de Cerebri Morbo*, 26.) of a full-fed and lazy ecclesiastic who supposed himself under the influence of an Incubus, which he has told with so much spirit and naïveté, that we cannot abstain from extracting it entire. *Nuperrimè Sacrificus quidam me convenit: 'Domine,' inquit, 'nisi succurras misero et afflicto, actum est, et prorsus perii; tabes me habet, Viden' quam sim emaciatus, quam exanguis? vix tenui pelle contegor, succulentus esse soleo, speciosoculus et bene habitus; nunc fædum spectrum videor, hominisque inanis imago.' 'Quid,' inquam, 'te cruciat, et quam affectûs tui causam opinaris?' 'Dicam,' ait, 'intrepidè, et valdè admiraberis. Sub quamlibet fermè noctem ad me commeat muliercula mihi non ignota, et pectori meo illabitur, ipsas violenter comprimit atque coarctat animæ meæ vias, ut ægrè respirare queam. Quin clamitare cupienti, vocis iter præcludit, ut, quanquam præ pavore nitor attollere, minimè queam. Nec manus ad propulsandam injuriam, nec pedes ad capessendam fugam expedire valeo. Vincit me et affixum tenet. Heus, inquam subridens, nihil admirandum prædicas (ex narratione Incubum intelligebam) merum est phantasma, merum ludibrium. Nec plura moratus, 'Phantasma,*

Jason Pratensis.

INCUBUS. inquit, 'et Ludibrium,' inquit, 'non est: ita me Deus amet, quæ hisce oculis conspicatus sum, et quæ hisce manibus exercui enarro. Equidem vigilans, mentisque compos, eam video coram, et invadentem accipio, conorque obluctari; sed præ languore, metu, angustia, et impactu vi, nihil efficio. Hæc de re horsum versum amens cursitavi, unumquemlibet percunctans, possetne succurrere miserabiliter pereunti. Minoritam consului, quem callidum veteratorem dicunt; ab hoc præsentaneam opem sperabam: sed spe meâ frustratus sum planè, nullam is salutem mihi attulit: tantum monebat, Deum Optimum Maximum, quem jam pridem precibus fatigarem, strenuè orandum, ut dignaretur infestam vexationem avertere. Adii vetulam quandam, pro famâ populari sagam atque versutam. Hæc aiebat, quæ sub crepusculum diei statim ab excreto lotio matulam obturarem dextrâ caligulâ, et fore ut eo ipso die malefica me inviseret. Id, etsi vanum videbatur, nec parum me ab experimento absterret Religio, victus tamen impotentia et diuturni laboris tædio, tentavi. Et, per Jovem, accidit vaticinium. Veniens in domum meam vesicæ cruciatum querebatur: nec potui ab illâ, aut preculis supplex, aut contentione minax impetrare, ne sub noctem ad me terrificam commearet. Sed implacabilis veterem morem asservat, semelque constituit me fædo angore conficere.' Hominem hunc vix quivi ullâ ratione ab insaniâ revocare: sed a secundo tertiove congressu hilarior factus, morbum agnoscere cæpit, et sanationis spem fiduciamque concipere.

Wier may be consulted for many other curious particulars, which we must not borrow from his pages. His medical resolution of the supernatural agency, as may be supposed, does not satisfy Bodinus, who plainly sneers at it in the following words. Qui se omnia Naturæ arcana rimatos putant, cum nihil planè in Dei mysteriis et Spirituum intelligentium videant, copulationem cum Diabolo esse negant, sed ex oppilatione morbum, qui tamen dormiendo solum ex consensu medicorum omnium accidit. At ex earum quas ante diximus confessione constat, ipsas non potuisse hoc morbo infestari, postquam certo die locoque antea indicto saltavissent. (ut sup.) We do not recollect to have read elsewhere of the communication of immunity from the Nightmare at the Devil's Sabbath, but it furnishes a most convenient argument in favour of the hypothesis of Bodinus.

James I.

The Royal Author of the *Dæmonology* equally rejects all Physical explanation. After stating that the Devil inveigles weak women "that hee may thereby have them feltred the sikerer in his snares," he meets the question of *Philomathes*, "Is not the thing which we call the *Mare*, which takes folkes sleeping in their beds, a kinde of these Spirits whereof ye are speaking?" by putting the following reply into the mouth of *Epistemon*: "No, that is but a naturall sicknesse, which the Mediciners have given that name of *Incubus* unto ab incubando, because it being a thicke fleame falling into our breast upon the heart, while we are sleeping, intercludes so our vitall spirits, and takes all power from us, as makes us think that there were some unnaturall burden or Spirit lying upon us and holding us down." (iii. 3.) One other point we learn from King James, which savours strongly of his reputed misogynism. "*Phi*. But what is the cause that this kind of abuse is thought to bee most common in such wilde parts of the world as Lapland and Finland, or in our North Isles of Orkney and Schetland? *Epi*. Because where the

Divell findes greatest ignorance and barbaritie, there INCUBUS. assailes he grosseliest, as I gave you the reason wherefore there were more witches of women-kinde nor men." (Id. Ib.)

Wier however informs us, (ut sup. iii. 28.) that not only to the Witches who seek it, but to others quite involuntarily, circa alias probas mulieres accidit hæc Incubi illusio; and he supports the fearful assertion, to which he by no means gives credence, by the testimony of a confession delivered to a Priest, and related by him to Martin of Arles. Indeed, according to the very reasonable opinion maintained by de Lancre, (de inconstantia Dæmonum,) that the zest of the Devil's pleasure is always heightened in proportion to the degree of crime which he is committing, it is most probable that in his selection he will have regard to preeminent virtue, and that the chief qualification for his attachment will spring from the most zealous endeavour to avoid it.

Homer, very probably, called to recollection an attack of the real Incubus, that most fearful of all nervous horrors, the Nightmare, when in representing the flight of Hector under the walls of Troy before Achilles, and the inability of the one to escape, of the other to arrest the object of his pursuit, he likens it to a dream.

ὡς δ' ἐν ὄνειρῳ ἢ δυνάται φεύγοντα διώκειν,
οὕτ' ἄρ' οὐ τίς δυνάται ὑποφύγειν ἢ δ' ὁ διώκειν.

Il. xxii. 200.

A passage which no doubt struck the key-note by Virgil, which one, yet more descriptive, was suggested to Virgil, as he approached the catastrophe of Turnus.

Ac velut in somnis oculos ubi languida pressit
Nocte quies, nequicquam avidos extendere cursus
Velle videmur, et in mediis conatibus ægri
Succidimus; non lingua valet, non corpore notæ
Sufficiunt vires, nec vox nec verba sequuntur.

Æn. xii. 908.

So, too, Oppian compares the effect produced by the numbing power of the Torpedo to the palsy of the Nightmare.

οἶον δ' ὁρφαίσιον ἐν εἰδωλοῖσιν ὄνειρον,
ἀνδρὸς ἀτυζομένοιο καὶ ἰεμένοιο φέβεσθαι
θρόσκει μὲν κραδίη, τὰ δὲ γούνατα παλλομένοιο
αστιμῆς ἄτι δισμὸς ἐπιγόμενοι βαρύνει.

Halieut. ii. 81.

Macrobius, also, has left a vivid account of this distressing affection, which may very fairly be supposed to have been derived from his own experience. Φάντασμα vero hoc est visum (he is speaking of the dream of Dido) cum inter vigiliam et adultam quietem, in quâdam, ut aiunt, primâ somni nebula adhuc se vigilare æstimans, qui dormire vix cæpit, aspicere videtur irruentes in se vel passim vagantes formas, a naturâ seu magnitudine seu specie discrepantes, variasq; tempestates rerum vel lætas vel turbulentas. In hoc genere est ἐφιάλης, quem publica persuasio quiescentes opinatur invadere, et pondere suo pressos ac sentientes gravare. (Somn. Scip. i. 3.)

Keyser in his very curious Work, *Antiquitates selectæ Septentrionales et Celticæ*, has collected many interesting particulars concerning the Nightmare. *Nachtmar*, he says, is from *Mair*, an old woman, because the spectre which appears to press upon the breast and impede the action of the lungs is generally in that form. The English and Dutch words coincide with the German. The French *cochemar* is *Mulier incumbens*, or *Incuba*. The Swedes use *Mara* alone, as we learn from the *Historia Suecorum Gothorumque* of Eric Olaus, where

INCUBUS. he states that Valender, the son of Suercher, succeeded to the throne of his father, *qui in somno a dæmonio suffocatus interiit; quod genus Sueco nomine Mara dicitur.* (lib. i. 27.) *Alii*, (we suppose Germans,) continues Keysler, *appellant die Trempe a calcando et premendo, forte a coeundo, nam fila spermatis galli gallinacei quæ prima in vitello vivificantur vocantur Hanten-Tramp.* The French peasantry call it *Dianus*, which is a corruption either of *Diana*, a fruitful parent of disease, or of *Dæmonium Meridianum*, for it seems there is a belief (which Keysler, not improbably, thinks may be derived from a false interpretation of an expression in the XCist Psalm, "the destruction that wasteth at noon-day") that persons are most exposed to such attacks at that time: and, therefore, women in childbed are then never left alone. But though the *Dæmonium Meridianum* is often used for the Ephialtes, nevertheless it is more correctly any sudden and violent attack which deprives the patient of his senses, as a *coup de soleil*. In the *Menagiana* (i. 110.) is a playful, and certainly a not less appropriate, interpretation: *Non nemo joco dixit Famem esse Dæmonium Meridianum.* In the upper tracts of Germany the name given to this disorder is *den Alp*, or *das Alp-dructen*, either from the *mass* which appears to press on the sufferer, or from *Alp*, or *Alf*, *Ang. Elf*. In Franconia it is *die Brud*, or *das Brud-dructen*, from the Druid or Weird Women, and there is a belief that it may not only be chased away, but be made to appear on the morrow in a human shape, and lend something required of it, by the following charm:—

Brud tom morgen
So will ich borgen.
Druid to-morrow
So will I borrow.

These Druids, it seems, were not only in the habit of riding men, but horses also; (something of which kind we have already noticed under *ELF LOCKS*;) and in order to keep them out of stables, the salutary *pentalpha*, ★, (which bears the name of *Bruden-fuss*, Druid's foot) should be written on the stable doors, in consecrated chalk, on the night of St. Walburgh. We must not omit that our English familiar appellation *Trot* is traced up to *Druid*; *vetula decrepita quales Sagas esse debet.* (p. 497.)

Ihre.

In Ihre's *Gloss. Suio. Goth.* is the following somewhat different account of *Mara*. *Mara, Incubus, Ephialtes, Ang. Night-mare, Nympham aliquam cui hoc nomen fuerit, pro Deâ cultam esse a Septentrionalibus narrat Wastovius in Viti Aquilonia (?) nescio quo auctore. De Vocis origine multi multa tradunt, sed quæ specie pleraque carent. Armorice mor notat somnum brevem et crebrò turbatum, mori somnum ejusmodi capere (v. Pelletier, in Dict. Britannique) quæ huc apprimè facere videntur. Aliàs observavit Schilterus, More pro Diabolo vel malo Dæmone apud veteres Alemanos usurpari. Marlock, plica quæ sæpe capillos hominum contorquet. Verisimile est credidisse superstitosam vetustatem, istiusmodi plicas Incubi insultibus esse adscribendas. Richey a Mähre, equa, nominis rationem petit, quum equorum caudæ similem in modum sæpe complicatæ sunt.* Here, again, we find the *witch-riding* of horses, against which a stone amulet is provided by Aubrey, (*Miscellanies, Magick*, 196.) similar to one which we are about to notice immediately below.

Among the incantations by which the Nightmare

may be chased away, Reginald Scot has recorded the following in his *Discovery of Witchcraft.* (iv. 11.)

St. George, St. George, our Lady's Knight,
He walked by day so did he by night:
Until such time as he her found,
He her beat and he her bound,
Until her troth she to him plight,
He would not come to her that night.*

"Item," continues the same ingenious author, "hang a stone over the afflicted person's bed, which stone hath naturally such a hole in it, as wherein a string may be put through it, and so be hanged over the diseased or bewitched party, be it man, woman, or horse."

Every reader of the above lines will be reminded of the similar charm which Shakspeare has put into the mouth of Edgar as Mad Tom in *King Lear.* (iii. 4.)

Saint Withold footed thrice the wold;
He met the Night-mare and her nine-fold
Bid her alight,
And her troth plight,
And aroint thee, witch, aroint thee.

These lines have furnished the commentators with a large field for various readings. Warburton in the second verse substitutes *her name told* for *her nine-fold*, a very unnecessary variation: and to the last line, for the sake of the rhyme, he adds *right*, in which he is probably correct. In all but the *telling of her name* his paraphrase appears to express Shakspeare's real meaning. "Saint Withold traversing the wold or downs met the Nightmare, who *having told her name*, he obliged her to alight from those persons whom she rides, and plight her troth to do no more mischief. This is taken from a story of him in his Legend. Hence he was invoked as the Patron Saint in the distemper." Tyrwhitt suggests, and it can scarcely be doubted that he is right, that *her nine-fold* is no more than *her nine foals*, changed in order to rhyme with *wold*; and adds, that he cannot find this adventure in the common Legends of St. Vitalis, whom he supposes to be here called St. Withold. Hill and Tate read *Swithin* footed thrice the *cold*, and Farmer would have it *oles* (the provincial pronunciation of *wolds*) and *foles*. Malone says *her nine fold* are *her nine familiars*. How any of the Editors obtained tolerable sense may be a matter of surprise when we turn to the old quarto in which the words stand as follows: "Swithald footed thrice the olde anelthu night moore and her nine fold bid her, O light and her troth plight and arint thee, with arint thee."

Another charm of earlier date occurs in Chaucer's *Miller's Tale*. When the simple Carpenter discovers the crafty Nicholas in his feigned abstraction, he thinks he may perhaps be Hag-ridden, and addresses him thus:

"I crouch the fro Elves and fro wikid wightes,"
And therewith the Night-spell he seide arightes,
On four halvis of the house about,
And on the dreshfold of the dore without,
"Jesu Christ, and Seint Benedight,
Blesse this house from every wikid wight,
Fro the Night's Mare, the wite Paternoster,
Where wennist thou Seint Peter's sister."

372.

We cannot explain the allusion in the last line.

* In the *Monsieur Thomas* of Fletcher these lines occur with a slight variation, which improves their metre, if not their sense.

St. George, St. George, our Lady's Knight,
He walks by day, so he does by night;
And when he had her found,
He her beat and her bound,
Until to him her troth she plight
She would not stir from him that night.

Charms
against the
Nightmare.

INCUBUS. There can be little doubt that the two opening lines which Boccaccio in his pleasant tale of Gianni Lotteringhi (*Giornata*, vii. Nov. 1.) makes Monna Tessa deliver to her lover Federigo, are borrowed from some genuine prophylactic.

*Fantasima, Fantasima che di notte vai,
A coda ritta ci venisti, à coda ritta te n'andrai.*

The remainder was addressed to the particular visitant, and, however agreeable, would not be understood by every Nightmare. *Va nell' horto à pie del pesco grosso, troverai unto bisunto e cento cacherelli della gallina mia; pon bocca al fiasco, et vatta via, et non far mal ne à me, ne à Gianni mio.*

Mr. Douce (*Observations on Shakspeare*, i. 205.) has pointed to some other formularies, and has noticed that Asmodeus was the Fiend of most evil repute on these occasions. In the *Otia Imperialia* of Gervase of Tilbury, (iii. 93.) which we have not had it in our power to consult, some other protecting charms are said to exist.

Drayton is the only Author whom we recollect as having given an agreeable origin to the Nightmare; he ascribes it rather to a playful than to a fiendish agency.

And Mab his merry Queen, by night
Bestrides young folks that lie upright,
(In older times the *Mare* that hight)
Which plagues them out of measure.

Nymphidia.

Progeny of
Incubi.

The Incubus, as we have before hinted, succeeded to the paternity of the Heathen Gods: as the Comte de Gabalis pleasantly expresses it, *comme le Diable soit le père de tous les hommes qui naissent sans qu'on scache qui les met au monde.* Of this species of generation Leo Allatius is a strenuous advocate in his *Tract de Patriâ Homeri*; and the two most celebrated children whom we call to mind as having been gifted with such a parentage, are Merlin and Luther; the first on account of his Thaumaturgic powers, without any detriment to his reputation; the second from the uttermost virulence of the *odium Theologicum*, and sorely to his discontent. Such children of unusual and precocious growth as now-a-days are cheaply exhibited in itinerant caravans, in earlier times would have been deemed the Sons of Incubi. Matthew Paris informs us that, in 1249, *quidam Incubâ (Incubo?) Dæmone, ut fertur, generatus, in confinio Walliæ, in terrâ scilicet Comitatus Herefordiæ, infra dimidium annum plenè dentatus, ad staturam ascendit adolescentis septemdecim circiter annos habentis. Cujus mater, post partum languore correpta, protinus emarcuit et miserabiliter est exanimata.* (p. 768.) That the superstition, like that more classical one which fathered Hercules on the Thunderer himself, and the twin founders of Rome upon the God of War, very often was a convenient veil for mere human frailty there can be little doubt. There is a wicked story of an Incubus, when detected in a Lady's Chamber, assuming the venerable form of an immaculate Bishop: and the probability of such occurrences is gently alluded to in some lines of Chaucer in which he laments the increasing empire of Reason—*on a banni les Démones et les Fées.* We have cited part of these already above, but they are of such exquisite beauty, and withal so little rusted by antiquity of language, that we do not hesitate to subjoin them entire. We think they possess greater vigour and freshness (and this is not often so) than the paraphrase by Dryden, who has expanded them into more than twice their original number.

In the old dayes of King Arthure,
Of which the Bretons speke in great honour
All was this land fulfilled of Fayry;
The Elfquene with her jolly company
Danced full oft in many a grenè mede,
This was the old opinion as I rede,
I speke of many hundred yere ago,
But now can no man se none Elfis mo.
For now the gretè charity and prayers
Of Limitours, and other holy Frerers,
That serchin every lond and every streme,
As thik as motis in the sunnè beme,
Blessing halls, chambirs, kitchinis and boures,
Cities, boroughs, castilis and hie toures,
Thorpis and barnis, shipins and dairys,
This maketh that there ben now no Fayeys,
For there as wont to walkin was an Elf
There walkith now the Limitour himself,
In Undirmelis & in Morrowinges,
He saith his Mattins and his holy thinges,
As he goth in his Limitatioune.
Wymen may now go safely up and downe
In every bush and under every tre
There n' is none othir Incubus but he,
And he will den them no dishonor.

Wife of Bath's Tale, ad in.

To turn to the Medical History of the Incubus. Pliny has recommended two remedies for this complaint; one sufficiently simple, wild piony seed, which he says *medetur Faunorum in quiete ludibriis.* (xxv. 10.) Another, which it would not be easy to discover in any modern Pharmacopœia, is a decoction in wine and oil of the tongue, eyes, liver, and bowels of a dragon, wherewith, after it has been left to cool all night in the open air, the patient should be anointed every morning and evening. (xxx. 24.)

Dr. Bond, a Physician, who tells us that himself was much afflicted with the Nightmare, published an *Essay on the Incubus* in 1753. At the time at which he wrote, medical attention appears to have been very little called to the disease, and some of the opinions hazarded were sufficiently wild and inconclusive. Thus Dr. Willis said it was owing to some incongruous matter which is mixed with the nervous fluid in the cerebellum; (*de Animâ Brutorum*, 6.) and Bellini thought it imaginary, and to be attributed to the idea of some demon which existed in the mind the day before. (*de Morb.* p. 604.) Both of these writers might have known better if they would have turned to Fuchsius, (with whom Dr. Bond appears to be equally unacquainted,) who in his *Work de Curandi Ratione*, published as early as 1548, has an excellent Chapter (i. 31.) on the causes, symptoms, and cure of Nightmare, in which he attributes it to repletion and indigestion, and recommends the customary discipline.

Lying on the back is considered by Dr. Bond as one of the chief proximate causes; and to this position, also, he refers Colonel Townshend's remarkable power of suspending animation, which we have already noticed under ASPHYXIA. He adds the following corollaries as containing the sum of his reasoning, and we see no cause to dispute their justness. 1. That they who have a very sensible system of fibres, and are soon affected by a stimulus, are least subject to the Nightmare; 2. that sluggish, inactive constitutions are most liable to it; 3. that the severity of the fit will always be proportional to the sensibility of the fibres and the quantity of blood; 4. that the duration of a fit will be proportional to the sensibility and vigour of the constitution; 5. that they who sup sparingly and never sleep on their backs are seldom or never afflicted with it; 6. that it is more

INCUBUS.

INCUBUS. common in those seasons of the year which most increase the volume of the fluids, hence Spring and **INCULK.** Autumn are its most fertile periods. Its frequent recurrence is not a favourable prognostic, but foreruns many fatal diseases. Dr. Bond, if we may judge from his writings, was a man of a grave, simple, demure, and medical tone of mind, and we doubt not he would have been grievously shocked if any of his readers had hinted a suspicion that the sly humour, which nevertheless most undoubtedly lurks in the following Case, was voluntary on the part of the Author. It furnishes a companion piece to the *otiosus Sacrificus* of Wier.

"A corpulent Clergyman about fifty years old, who is very fond of strong beer and flesh suppers, but so subject to the Night-mare that he is obliged to stint himself to a certain quantity every night; whenever he happens to take an over-dose he groans so loudly that he often awakes all the people in the house. He has assured me that in these fits he imagin'd the Devil came to his bed-side, seiz'd him by the throat, and endea-

voured to choak him. Next day he observ'd the black impressions of his hard fingers on his neck. After being at a wedding or christening he never escaped it; and his servant is obliged to watch him all the next night, and rescue him from the paws of Satan, whose dreadful approach always makes him roar loud enough to awake the servant if he should happen to be asleep. The servant told me that he always found his master lying on his back in the fit." (56.)

Every one must remember Fuseli's terrific conception of the Nightmare, which well represents (though under a gentler form) the agonies of this corpulent Clergyman. Fuseli is said to have painted that Picture from a recollection of his own sufferings under an Incubus, which he had succeeded in obtaining, after voraciously gorging an immoderate supper of raw pork, for the express purpose.

The Nightmare, its causes and its cure, is well treated Dr. Whytt. by Dr. Whytt in his *Observations on Nervous Diseases*. (vi. 18.)

INCURIOUSITY. } care or anxiety, indifferent; no desire or wish to learn, know, or understand.

The best gentlemen anciently were not the best scholars, and (minding matters of more moment) were somewhat too *incurious* in their names.

Fuller. *Worthies*, vol. i. p. 49. *Of England*, ch. xvii.

If we may lose the gifts by our own fault, we may purchase them by our diligence: if we may lessen them by our *incuriousness*, we may increase them by study; if we may quench the spirit, then also we may re-kindle it.

Taylor. *Polemical Discourses*, fol. 5. *An Apology for authorized and set Forms of Liturgie*.

It is enough for me to rest in the hope that I shall once see them [saints and angels:] in the mean while let me be learnedly ignorant and *incuriously* devout, silently blessing the power and wisdom of my infinite Creator, who knows how to honour himself by all these glorious and unrevealed subordinations.

Hall. *Works*, vol. iii. fol. 968. *The Invisible World*, book i. sec. 7.

Whether he steals along the lonely dale,
In silent search; or through the forest, rank
With what the dull *incurious* weeds account,
Bursts his blind way.

Thomson. *Spring*.

His [Julian's] attempt produced other circumstances that would obtrude themselves even on the most *incurious*.

Warburton. *Works*, vol. viii. p. 90. *Julian's Attempt to rebuild the Temple*, book i. ch. v.

But his [Pilate's] *incuriosity* or indifference, when truth was offered to be laid before him as a private man, and by one who, he knew, had the repute of exercising every spiritual power necessary to enforce it, shews him in a light much less excusable.

INCURVITY. } bent, or inflected.

Have yee great ones all the *incurvations* of the knee, the kisses of the hand, the styles of honour, yea the flatteries of heralds, let God's hand touch you but a little, with a spotted fever, or girds of the colicke, or belking paines of the gout, or stoppings of the bladder, alas what ease is it to you, that you are laid in a silken bed, that a potion is brought you on the knee, in a golden cup?

Hall. *Works*, vol. ii. fol. 407. *The Fall of Pride*.

Being the hieroglyphick of celerity, and swifter then other animals, men best expressed their [the dolphin's] velocity by *incurvity*, and under some figure of a bow.

Sir Thomas Brown. *Vulgar Errors*, book v. ch. ii.

Mr. Flamstead's measures were taken with a micrometer that pinches or clasps the opposite edges of a planet, which would *incurvate* the rays one way; and Mr. Huygens's were taken with the interposition of a thin tapering plate covering the planet as far as the extremity of its face, which would cause an *incurvation* of the rays the contrary way.

Derham. *Astro-Theology*, book i. ch. ii. note 1.

While they remain parallel, and with little or no *incurvation* upwards or downwards, the countenance will indicate tranquillity, that is, a composed state of mind without emotion.

Beattie. *Moral Science*, part i. ch. ii. sec. 7.

INDAGATION, } Lat. *indagare*, which Vossius
INDAGATOR. } thinks is by contraction from *in-
duagere*; *indu*, for *in*, and *agere*, to act or do; conse-
quentially, to search after or into.

Search or investigation, examination, scrutiny.

Part hereof hath been discovered by himself, and some by humane *indagation*: which though magnified as fresh inventions unto us, are stale unto his cognition.

Sir Thomas Brown. *Vulgar Errours*, book i. ch. x.

Wherefore for men to make nothing of this royal law of Christ, [Thou shalt love the Lord thy God, &c.] and yet to pretend to be more accurate *indagators* into matters of religion, and more affectionate lovers of piety than ordinary, is either to be abominably hypocritical, or grossly ignorant in the most precious and necessary parts of Christianity.

Henry More. *Defence of the Moral Cabbala*, ch. i.

Chymists seem not to have taken notice of what importance such experiments may be in the *indagation* of the nature, and especially of the number of the elements.

Boyle. *Works*, vol. i. p. 483. *The Sceptical Chymist*.

An enquiry, whose truth is of that importance, and of that difficulty, that it may as well deserve, as require, to be searched into by such skilfull *indagators* of nature as yourselves.

INDAMAGE, also written *Endamage*, *q. v.* *En*, or *in*, and *damage*. Lat. *damnum*, (from *damn-are*), the loss or injury, the punishment to which any one is doomed or condemned.

To hurt, injure, or harm; to inflict any injury or detriment.

This tyme is dangerous to all ages, all natures, and in all countreys, but the natures note and moyst, be leste *indamaged*.

Sir Thomas Elyot. *Castel of Helth*, book ii. p. 38.

The tryal hath *indamag'd* thee no way,
Rather more honour left and more esteem.

Milton. *Paradise Regained*, book iv. l. 206.

This is of great use, both in respect of men's health, especially if they be of a tender or sickly constitution, and in respect of convenience for the keeping flesh, sweet-meats, and several sorts of wares and goods, and even household-stuff, that are subject to be *indamaged* by moist air.

Boyle. *Works*, vol. iii. p. 795. *Of the Utilities of Hygroscopes*.

INDANGER, also written *Endanger*, *q. v.* *En*, or *in*, and *danger*, *q. v.*

To *endanger* or to *danger* is,—to be or cause to be within the action or agency, the reach or risk of pain or penalty, of hurt, ill, or mischief; within the reach or risk of penal, hurtful, mischievous power.

What neded vs to be *indaungered* and become debtor to Christe, if Moses law sufficiently worke our saluacion.

Udall. *Galatians*, ch. iii.

How fraile, vnto how many jeopardies *indaungered*, how fleeting, and howe vnstable a thing is beuty, whē one ague, one wart, or one haire may of the most goodly make the most loathsome.

Vives. *Instruction of a Christian Woman*, book ii. ch. v.

For the fear of a less inconvenience unpardonably requires of his brethren, in their extreme necessity, to debar themselves the use of God's permissive law, tho' it might be their saving, and no man's *indangering* the more.

Milton. *Works*, vol. i. fol. 237. *Of Nullities in Marriage*.

The rule is, rather to take less than is allowed us than to take all; rather to abridge ourselves of our lawful liberties, than by doing all that we may lawfully do, *indanger* our falling into sin.

Sharpe. *Works*, vol. i. p. 191. *Sermon 7*.

INDEAR, } Also anciently, and now more
INDEARMENT. } commonly, written *Endear*, *q. v.* *En*, or *in*, and *dear*, *i. e.* (consequentially) precious, costly, highly or greatly prized or valued, rated or esteemed.

To cause to be, to make *dear* or precious; to esteem or value, as *dear* or precious; as highly or greatly prized, much or greatly beloved.

He whom an honest quæstorship had *indear'd* to the Sicilians, was not more by them importun'd against Verres, than the favourable opinion which I had among many who honour ye, and are known and respected by ye, loaded me with entreaties and perswasions, that I would not despair to lay together that which just reason should bring into my mind, toward the removal of an undeserved thraldom upon learning.

Milton. *Works*, vol. i. p. 153. *Of Unlicensed Printing*.

He now animates himself after the temptation against the spiritual Goliath, with the like remembrance of God's ancient mercies, and in *dearments* to his soul.

Hall. *Works*, vol. iii. fol. 667. *Satan's fiery darts quenched*, dec. ii. 9.

The young woman whom he lov'd was instructed to open his eyes accordingly, as well to *indear* herself to him by such a circumstance, as to moderate his extasies by the persuasion of a voice, which had so much power over him as hers ever had.

Tatler, No. 35.

The last was indeed the consideration that so much *indeared* Mr. Pope to him. He found him an honest and well-principled man.

Warburton. *Works*, vol. i. p. 28. *The Life by Hurd*.

INDEAVOUR, now usually written *Endeavour*. *Deavour*, *devoir*, or *dever*, is from the Lat. *deb-ere*; and thus, *endeavour* is *officium suum prout debet, exsequi*.

As the Fr. *s'efforcer*, "to *endeavour*, labour, enforce himself, to strive with might and main, to use his (utmost) strength, apply all his vigour, employ his (whole) power." Cotgrave.

In our older writers the verb is sometimes used reflectively. Instances may be found in the *Collect for the IIId Sunday after Easter*, and in the *Homily for Rogation Week, IIIId Part*, (p. 417. Oxford 8vo. Ed.) Johnson (*v.* ENDEAVOUR) has used it actively.

They cast them selues at Cesar's feet, and weeping tolde him that they sought & *indeuored* no lesse to haue the thyngs kept secret whyche they should speake, then to obteyne the thyngs they sewed for.

Arthur Goldyng. *Cæsar. Commentaries*, book i. fol. 23.

But you patrician spirites that refine
Your flesh to fire, and issue like a flame
On braue *indeuours*.

Hakluyt. *Voyages, &c.* vol. iii. fol. 670. M. G. C.

These, by how much more hard they are to intreat, by so much more precious they are, being obtained; and therefore worthier our *indeuour*.

INDEBT, } *In*, and *debt*, *q. v.* Lat. *debit-um*,
INDEBTMENT. } past participle of *deb-ere*; *de*, and *hab-ere*; *quasi de alio hab-ere*. Vossius.

To have or hold, or cause to have or hold, of, or from another, his property or right, his *due*; that which is owed to him, which ought at some time to be delivered or paid to him; to be bound to return or repay.

Thy fortune hath *indebted* thee to none,
But t'all thy people universally;
And not to them, but for their love alone,
Which they account is placed worthily.

Daniel. *To the King's Majesty*.

For he began to flatter the common people, and specially those that were *indebted*: he took upon him to defend their causes, and pleaded their case at the bar against their creditors.

Sir T. North. *Plutarch*, fol. 128. *Camillus*.

Hall. Balm of Gilead. Comforts against Imprisonment.

As a misery is not to be measured from the nature of the evil, but
from the temper of the sufferer, I shall present my readers, who are
unhappy either in reality or imagination, with an allegory for which I
am *indebted* to the great father and prince of poets.

Tatler, No. 146. col. 2.

Whatever I may be able to do I stand *indebted* to Mr. Locke for,
learned from him which way to direct my observation and how to
make use of what I observe.

Of all God's works, which do this world adorn,
There is no one more faire and excellent,
Then is man's body both for powre and form,
Whiles it is kept in sober government;
But none then it more foule and *indecent*,
Distempered through misrule and passions base.
Spenser. Faerie Queene, book ii. can. 9.

Of the *indecencies* of an Heroick Poem, the most remarkable are
those that show disproportion either between the persons and their
actions, or between the manners of the Poet and the Poem.
Davenant. The Answer of Mr. Hobbes to the Preface before Gon-
dibert.

Your lordship knows I am a servant; and I could not run away if
I would, or at least it had been to little purpose, though I should
have adventured to do so *indecent* and so undutiful an action.

Ludlow. Memoirs, vol. iii. p. 278.

And when *indecently* I rave,
When out my brutish passions break,
With gall in every word I speak,
She with soft speech my anguish cheers,
Or melts my passions down with tears.
Swift. To Stella, 1723-4.

I was indeed amazed to find a poor harmless woman, weak though
learned, guilty of nothing but what her religion infused in her, so
carried to an *indecence* of barbarity, that it appears that Bonner him-
self was not cruel enough for her, or at least for her confessor.

Burnet. History of Reformation, vol. iii. Introduction, p. xxx.

Conclude, therefore, when ye hear a certain language on this sub-
ject, that it is equally foolish, as it is *indecent*; and that we may
safely profess a belief in Jesus, without risking the reputation of your
wisdom.

Hurd. Works, vol. vi. p. 274. Sermon 18.

Profane talkers, lewd jesters, and they who, by speech or writing,
present to the ear or to the eye of modesty any of the *indecencies* I
allude to, are pests of society.

Beattie. Moral Science, part i. ch. ii. sec. 5.

INDECIDUOUS, *in*, and *deciduous*; *q. v. de*, and
cadere, to fall. *Deciduous* is applied to trees, whose
leaves fall, and is thus opposed to evergreens, which
are *indeciduous*, or do not fall the leaf.

The sun and Moon are usually described with humane faces;
whether herein there be not a pagan imitation, and those visages at
first implied Apollo and Diana, we may make some doubt, and we
find the statua of the sun was framed with raies about the head, which
were the *indeciduous* and unshaven locks of Apollo.

Indetermining, inconclusive, hesitating, unable to
adjudge, conclude, or determine.

Hitherto all their difficulties have arisen from their *indecision*, and
their wrong measures.

Burke. Works, vol. ix. p. 222. Letter to the Right Honourable
Edmund Perry.

But *indecision*, though a vice of a totally different character, is the
natural accomplice of violence.

Id. Ib. vol. vi. p. 237. Appeal from the New to the Old Whigs.

DECENT, and **INDECENT**.

Unfit, unbecoming, unseemly; applied not so
strongly as *indecent*.

As if a herald in the achievement of a king, should commit the
indecorum to set his helmet sideways and close, not full-faced and
open in the posture of direction and command.

Milton. Works, vol. i. fol. 230. Of Nullities in Marriage.

The offence [loudness in the responses at church] mentioned in
the following epistles (though it may seem to be committed in a
place sacred from observation) is such that it is our duty to remark
upon; for though he who does it is himself only guilty of an *inde-*
corum, he occasions a criminal levity in all others who are present at
it.

Tatler, No. 54. col. 3.

At his time of life, if he could not do something by some sort of
weight of opinion, natural or acquired, it was useless and *indecorous*
to attempt any thing by mere struggle.

Burke. Works, vol. v. p. 22. On the Army Estimates, 1790.

Some slight *indecorums* therefore we may reasonably expect to

Burnet. *History of the Reformation*, Anno 1553.

This transaction is sometimes called the social compact, and these supposed original regulations compose what are meant by the constitution, the fundamental laws of the constitution; and form, on one side, the inherent, *indefeasible* prerogative of the crown; and, on the other, the unalienable imprescriptible birthright of the subject.

Cook. Voyages, vol. iv. book iii. chap. vii.

If a deed be made by more parties than one, there ought to be regularly as many copies of it as there are parties, and each should be cut or *indented* (formerly in acute angles *instar dentium*, like the teeth of a saw, but at present in a waving line) on the top or side, to tally or correspond with the other; which deed so made is called an *indenture*.

Blackstone. Commentaries, book ii. ch. xx.

AN **INDENTURE**, as the citation from Blackstone shows, is a **CHIROGRAPH** cut, not straightly, but in an *indented* form, so that the jagged edges, when brought together, may exactly tally, and prove the genuineness of the counterpart deeds. For a long time the words "This Indenture" (or some others, as we have shown under **CHIROGRAPH**) were very carefully written and divided between the two parts. Deeds thus made were called *Syngrapha*, *Chirographa*, or *Cirographa*, though Spelman (*Glossary*, ad v.) cites a passage from Lindewod, *Tit. de Offic. Archidiacon. c. 1.* in which the two are plainly distinguished from each other. *Differunt Chirographus et Syngraphus, quia Syngraphus est scriptura inter creditorem et debitorem Indentata: in cujus scissurâ literis capitalibus scribitur hæc dictio*, *Syngraphus, (sive τὰ Συγγραφα.) Sed Chirographus dicitur quod manu unius tantum, puta debitoris, scribitur, et penes creditorem relinquitur. Aliquando tamen promiscuè sumitur secundum Januensem.* The words of Johannes de Januâ here referred to are cited by Du Cange (*ad v. Chirographum*).

This mode is still preserved in making out the Indenture for a Fine; but the precaution is plainly useless, for the suture (if we may so call it) of the two parchments is quite sufficient to establish their original identity. For the most part, therefore, the Indenting only, without cutting through any letters, is at present in use; and it seems, as Blackstone says, to serve for little other purpose than to give name to the species of Deed. Even this purpose, as the parchment is now cut, is not legitimately obtained.

Spelman has not discovered any Indenture in England before the year 1216; Hicks before 1208; Rymer before 1197; Madox before 1185. The writer of a very tedious and unnecessarily long paper relative to them in the *Enc. Méthodique (Antiq.)* affirms that they were in use during the reign of Henry II.; and adds, with no little boldness, considering the diligence and research of the above names which he has just cited, *et si l'on examinait avec soin les archives des Eglises d'Angleterre, on en découvreroit sans doute encore de plus anciennes.* In France, P. Mabillon has not seen any before 1106. Indentures received their names, *Bi-partite*, &c. from the number of times which they were repeated. Spelman mentions that of Henry VII. respecting his Chapel at Westminster, as *septem-partite*, and he speaks of another as *undecim-partite*.

By the Romish Church INDEX is used absolutely to designate the Catalogues or Lists of Books prohibited by Ecclesiastical authority, on account of the Heretical opinions supposed to be contained in them, or maintained by the authors or editors of them. The catalogue, or list of books absolutely prohibited, is simply called the *Index*, or *Index Librorum Prohibitorum*; but, when the list or catalogue is of books allowed to be read after correction or alteration, agreeably to the orders of the Papal authorities, it is termed *Index Expurgatorius*; and in the later Indices, the words *donec corrigantur* are subjoined to certain Works, in order to render a separate expurgatory Index unnecessary. (Townley's *Essays on various Subjects of Ecclesiastical History*, p. 133.) The invention of Printing about the middle of the XVth century caused a rapid multiplication of books, and induced the Papal Hierarchy to prevent, if possible, the circulation of any which might prove injurious to the interests of the Romish Church. Hence originated *imprimaturs*, or official permissions to print works; and the promulgation and diffusion of the doctrines of the Reformation in the following century, increased the determination of the powerful adherents of Popery to suppress and to destroy all books tinged with Lutheranism or maintaining any of the peculiar opinions held by the Reformed Churches. In 1546, in pursuance of an Edict of the Emperor Charles V., the University of Louvain published an Index or catalogue of books regarded as dangerous; of which a revised edition was published in 1550. Similar lists of interdicted books appeared nearly at the same time at Venice, Paris, Rome, Cologne, &c. for an account of which see Peignot's *Dictionnaire des Livres condamnés au feu, supprimés, ou censurés*, tom i. p. 256—266, and Mendham's *Account of the Indices, both Prohibitory and Expurgatory, of the Church of Rome*, p. 17, et seq.

These Indices assumed their most systematic form at the Council of Trent, which, at its XVIIIth Session referred the consideration of Works to be prohibited to a select Committee; and in the XXVth Session, what

INDEX. had been done by that Committee was referred to the Pope, (*Conc. Trid. Canones*, p. 177, 362. Paris Edit. 1624,) that it might be completed and published with his authority. The Work was accordingly published in 1564; besides the Catalogue of prohibited books, it contains general rules relative to such books, drawn up by certain persons, deputed for that purpose by the Tridentine Council, and sanctioned by Pope Pius IV. These Rules, which are ten in number, are prefixed to the different Indices which have been published since that period. They are also contained in the Paris edition of the Canons of the Council of Trent already cited; (p. 433—440;) and a translation of them will be found in Townley's *Illustrations of Biblical Literature*, vol. ii. p. 478—485.

Of the CONGREGATION of the Index, which forms a branch of the Inquisition, we have already spoken. It holds its sittings at Rome, and has the right of examining generally all books which concern Faith, Morals, Ecclesiastical Discipline, or Civil Society; on which it passes judgment, for suppressing them abso-

lutely, or directing them to be corrected, or allowing them to be read with precaution, and by certain persons. Pius V. confirmed the establishment of this Congregation. Persons, specially deputed by it, may give permission to Romanists throughout the world, to read prohibited books; and the penalty, denounced against those who read or keep any books suspected of heresy or of false doctrine, is the greater excommunication; and those, who read or keep Works interdicted on any other account, besides the mortal sin committed, are to be severely punished at the will of the Bishops. INDIA.

Name.

INDIA, the name given by the Greeks and Romans to the Eastern extremity of Asia, is derived from the Persian word *Hind*, (*Heündo* in Zend and Pehlevi, the sacred and vulgar languages of Ancient Persia,) the antiquity of which is proved by the Syriac term *Hendû*, the Hebrew *Hoddû*, (*nd* being changed into *dd* by a common permutation, *Esther*, ch. i. v. 1. ch. viii. v. 9.) and the Greek word *Ἰνδός*, all commonly used in the earliest periods to which History reaches. The origin, however, of the name cannot be easily ascertained. It is unknown to the natives, and was borrowed by the Greeks and Hebrews from the Persians, who seem to have called their Eastern neighbours Sindians, from the mighty river which formed their common boundary; for *Sind* and *Hind*, *Sind'hu* and *Hindû* appear to have been originally the same words, *h* having been substituted for *s*, as in the Greek and Latin words, *ἔξ, ἑπτα, ὕλη, ὕς, sex, septem, sylva, sus*; and as we find *sapta, sahasra, swam, suras, santi*, in Sanskrit, are *haplé, hatré, hwam, hweré, hyanté*, in Zend, and *haft, hezár*, in Pehlevi, as well as in modern Persian. Now *Sind'hu* signifies, in the ancient Indian language, "the Ocean," and was, therefore, naturally used as the name of the largest Indian river; whence the Persians called the Country separated from them by that river, *Sind'húst'hán*, or *Hindúst'hán*, i. e. the Sindian, or Indian, Region. In an abridged form, this word became *Sind* or *Hind*, terms still used in Persian; and from the latter the Greeks and Romans formed the words *Ἰνδική* and *India*, by omitting the aspirate, and adding the distinctive termination.

Greek divisions.

I. The Greeks knew nothing of India before the time of Alexander, except from the report of the Persians; their earlier accounts are, therefore, extremely meagre and vague, and mixed up with absurd and extravagant fables. Darius (B. C. 520) first crossed the Indus, and conquered Kashmir and a part of the Penj-áb. (Herod. iv. 44. Mannert. v. ii. 8.) Alexander, following the same course, and entering by the only accessible route,

pushed his conquests a little further; (B. C. 327;) and the narratives given by his officers, supplied Eratosthenes, Strabo, and Pliny with the materials which they arranged and abridged. Ptolemy, who flourished at a later period, (A. D. 150,) when commerce had made his Countrymen acquainted with the Southern parts of India, has given a larger and more accurate account of that Country. He divides it (vii. 1, 2.) into *India within* and *India beyond* the Ganges. The former was bounded on the West by the Paropanisadæ, or people of Paropamisus, Arachosia, and Gedrosia; on the North by Mount Imaus, the Sogdians, and Sacæ; on the East by the river Ganges; and on the South by the Indian Ocean. The latter, or *India beyond* the Ganges, had that river on the West; Scythia and Serica on the North; the *Sinæ* on the East; and the Indian Ocean on the South. Other writers (as Arrian, v. 4. and Pliny, vi. 17.) make the Indus, its natural boundary, the Western limit of India, and Ptolemy seems here to have considered the Political rather than the Physical divisions of the Countries which he is describing. Strabo (xv. 1. 11.) calls the Northern mountains, the extremity of Taurus, named by the natives Paropamisus, (or Paropanisus,) Emodus and Imaus; the Western boundary, he says, is the Indus; Southern and Eastern the Atlantic Ocean. Of the two great rivers, the Indus and Ganges, the latter was not reached by Alexander, and was seen by very few of his followers. The Indus and its five great tributaries were, on the contrary, known to all of them. *Indus, incolis Sindus appellatus*, (says Pliny, *Nat. Hist.* vi. 23.) *in jugo Caucasii montis, quod vocatur Paropamisus, adversus solis ortum effusus, et ipse undeviginti recipit amnes. Sed clarissimos Hydaspem, quatuor alios afferentem: Cantabram, tres. Per se vero navigabiles Acesinem et Hypasin.*

Rivers.

The four Satrapies of Gedrosia, Arachosia, Aria, and Persian Paropamisus, to the West of the Indus, though included in India by the Persians, (Pliny, *ut sup.*) as being separated from the rest of their Empire by mountains

and deserts, and not subject to its government till conquered by Darius, son of Hystaspes, are naturally as much a part of that Country as Carmania, (Kirmán,) which was never separated from it, and are therefore reserved for the geographical account of Ancient PERSIA.

Punjaub.

Of the five great rivers which form the Region called from them Penj-áb, (five waters,) and which pour their united streams by the Panchanada (*i. e.* five rivers) into the Indus, four only were well known to the Greeks, the Satadru, or Satlej, not having been reached by Alexander: they were (Strabo, xv. 1. 27.) the Hydaspes, (Vitastà,) Acesines, (Sandala of Ptolemy, *i. e.* Chandrab'hágá,) Hyarôtis, or Hydraôtes, (Iravati,) Hyphâsis,* (Vipásà,) and Hesidrus, (Pliny, *Nat. Hist.* vi. 21.) more correctly named Zadadrus (from Satadru) by Ptolemy. (vii. 1. p. 201.) The Indus entered the sea by two mouths, (Arrian, v. 3.) which formed a delta similar to that of the Nile.

The declivities of Emodus, from whence the Hydaspes flowed, furnished Alexander with an abundance of timber, firs, pines, and cedars, for the fleet in which he descended that river to the mouth of the Indus. The Hydaspes, according to Arrian, received the Sinarus, or Sandabalis, and mixing with the Acesines in the territory of the Arispæ, flowed in one stream to the Indus. But the Acesines, before their junction, had been increased by the Hydraôtes and Hyphâsis. A more accurate acquaintance with upper India, obtained within the last thirty years, has ascertained the general correctness of the ancient accounts, and afforded the means of determining many doubtful points. The rivers crossed by Alexander are now known, and the following Table, which gives their names at different periods, will serve to connect the ancient with the modern geography of the Penj-áb.

1. Hydaspes, (Υδάσπης.)	} Vitastà.	{ Bihat, or Jélam.
or Bidaspes. (Βιδάσπης.)

Figure.

According to Strabo (xv. 1. 11.) the form of India is rhomboidal. The Western side along the course of the Indus to its mouths, he estimates at 13,000 stadia; (about 1350 miles;) but the opposite, or Eastern side, exceeds this by 3000 stadia; the length of the Promontory of Colis, or Colias, is, therefore, 16,000 stadia. (1700 miles.) From the Indus to Palibothra, the King's high road measured 20,000 stadia, (about 2260 miles,) and from that city to the sea was 6000 stadia, so that the whole distance from the mouths of the Indus to the South-Eastern extremity was 29,000 stadia.

Nations.

From Ptolemy's enumeration, (*Geogr.* vii. 1. p. 171.) which is far more comprehensive, it appears that the following were, in his time, the principal nations and kingdoms in India: 1. Casperia, (Kásmíra or Kash-

* *Vide* Diodor. Sicul. *Bibl.* xvii. 93. where all the MSS. but one have "Υφασίς." Strabo (*loc. cit.* sec. 27.) and Dionysius, (*Perieg.* 1145.) and most other ancient writers, have Hypânis.

mír,) near the sources of the Bidaspes, Sandabal, and Rhuadis. 2. Cylindriné, near the sources of the Bibasis, Zadadrus, Diamuna, and Ganges. 3. The Countries between the Indus and Bidaspes;—near the Indus, Varsa, (Urasa, *vid. As. Res.* xv. p. 66.) containing the towns of Isagurus, or Thagurus, and Taxiala, (Takshasilà;) on each side of the Bidaspes, the Country of the Pandovans, (Pándus,) containing Labaca, Sagala, (Sákala,) or Sangala, also called Euthymedia, Bucephala, where Alexander's favourite charger Bucephalus was buried, (Arrian, v. 19.) and Jomusa. 4. Between the Bidaspes and the Vindian mountains, (τὸ Οὐινδίων ὄρος, Vind'hya,) to the East of the former were the Caspiræi, eighteen of whose towns are named by Ptolemy; and among them Modura of the Gods. (Mat'hurà.) 5. To the East of these were the Gymnosophists, or naked Philosophers: after whom, advancing towards the Ganges, the Northermost Tribes were, 6. the Datichæ, who had three towns to the East and two to the West of the river; then, 7. the Anichæ, or Anachinæ, with two towns on the West and one on the East. 8. Prasiacé, or Country of the Prasii, with five towns on the West and two on the East of the river: and 9. Sauarabatis, or Saudrabatis, between 29° and 30° North, and 125° and 130° East, containing four towns.

Arrian (*Ind.* 4.) mentions, 1. the Cambisthōli, at the confluence of the Hydraotes and the Indus: 2. the Astrylæ, at the juncture of the same river and the Hyphasis: 3. the Cenei, or Ceei, Kékaya, (*vid. Rāmāyan*, ii. 53. 18. whose Capital was called Girivraja,) near the sources of the Saranges: 4. the Arispæ, at the confluence of the Hyphasis and Acesines: 5. the Attacēni, in whose Country the Neudrus, another tributary to the Hyphasis, rises: 6. the Abastani: 7. Xathri: 8. Ossadii, independent Tribes, near the Acesines: (Arr. vi. 15.) 9. the Adraistæ, on the Hydraotes: 10. the Glauganīcæ, or Glausæ, (Arr. v. 20.) between the Hydaspes and Acesines: 11. the Cathæi, between the Hydraotes and Hyphasis: 12. the Malli: and 13. the Oxydracæ.

The greater part, if not the whole, of these nations, was the offspring either of a mixed caste, or of a race different from the Hindús, and therefore considered by them as barbarous and impure. Being constantly at war with each other, they were easily subdued by their neighbours professing the Brahmanical faith; and were either gradually expelled, or amalgamated with their conquerors, by the adoption of their faith and manners. "There," says Strabo, "dwell the Coniaci," *i. e.* the people of Cory, (Ptolemy, vii. 2.) *i. e.* Cape Comorin, supposed by the Ancients to stretch out far to the South-East.

"Between the Indus and Hydaspes," says Strabo, (xv. 1. 28.) "is Taxila, a large and well-governed city in a populous and very fertile country, almost adjoining to the plains." In the mountains above this territory was the Country of Abisarus, (or Abissares, Arr. v. 20.) whose ambassadors said that he kept two serpents, one of which was 80, and the other 140 cubits long. Between the Hydaspes and Acesines, lay the Kingdom of Porus, (*i. e.* a Paurava, or descendant of the ancient hero Puru,) extensive and rich, containing about 300 cities; there was the forest on the declivities of Mount Emodus, which supplied Alexander with timber for his fleet. Cathæa, the territory of one of the inferior Chiefs named Sopithes, was placed by some writers between these rivers, by others beyond the Acesines and Hyarotis,

INDIA.

INDIA. on the borders of Gandaris. Cathæa was said to contain a mountain of salt large enough to supply the whole of India. Four veins of gold and silver were also discovered in other mountains not far off, by Gorgus the miner, but the Indians were ignorant of the art of smelting, and indifferent to their treasures. Between the Hypanis and the Hydaspes it is said that there are nine nations; (*ἑθνη*, Strabo, xv. 1. 33.) and Diodorus (xvii. 98.) places below the confluence of the Indus and Acesines the Syracusæ, (Sudracæ?) who were then in alliance with the Malli; the Sambastæ, a confederacy of Republican cities; the Sodraë and Massani, on both sides of the river; and the Countries of Musicanus and Porticanus, and next the Kingdom of Sambus, and the people called Brachmanes. Harmatelia, the last of their cities, appears not to have been far from the sea. To the South of the Hydaspes, probably nearer to the Indus, were the Sibæ, who boasted of their descent from Hercules, and were equipped with a skin and club like him, the Malli, and Oxydracæ, two great nations. Between them and Pattalene, the territory of Musicanus, that of Sabus, or Sambus, whose Capital was Sindonalia, or Sindomana, the Country of Porticanus, and others inhabiting the banks of the Indus. Lastly, Pattalene, the island formed by the two branches of that river; each side of which was an equilateral triangle, according to Onesicritus, (Strabo, *loc. cit.* sec. 33.) having each of its sides 2000 stadia (about 250 miles) in length. Aristobulus says that the interval between the arms of the river was only half that distance. Pattala, from which the island received its name, was a considerable city. Ptolemy (vii. 1. p. 168.) gives seven mouths to the Indus as to the Nile, and mentions their names and positions.

Ganges.

All the Ancients were agreed that the Ganges was the largest river known, (Strabo, *loc. cit.* sec. 35.) and the Indus next to it. Of the first, some said that its least width was 30, ($3\frac{1}{2}$ miles,) others 3 stadia: Megasthenes, who had seen it at Palibothra, affirmed that its width, where moderate, was as much as 100 stadia, (11 miles,) and that its depth was at least two fathoms. (*ὀρυσσάται*.)

Alexander's march.

The first Indians attacked by the Greeks were the Gandari, (Gand'hāras,) who appear to have migrated from the central part of the Penj-āb, (Pancha-nada,) and established themselves on the banks of the Indus. Their name may still be traced in the Kandahār of the modern Arabs and Persians. The first large city occurring on Alexander's march from the Indus to the Hydaspes, was Taxila, (Takshasila,) to whose King and people a similar name is given by the Greek and Roman writers. (Arr. v. 8. Strabo, xv. 1. 28. Plin. *Nat. Hist.* vi. 20.) Pliny, indeed, mentions the names of other Tribes, and says that the whole of the level country watered by the Eastern confluent of the Indus was called Amanda. At the distance of two days' march from the Acesines, Alexander came to Pimprama, Capital of the Adraistæ, (*i. e.* Arattas,) and soon afterwards to Sangala, or Sagala, (Sākala,) the chief city of the Cathæi, (perhaps the Xathri of Arrian, (vi. 15.) and the Cathari of Diodorus Siculus, (xvii. 92.) *i. e.* the Kshatras of the ancient and K'hyatras, or Katras of the modern Indians.) This people inhabited the Eastern bank of the Hypasis, or Hyphasis, (Vipāsā,) beyond which Alexander was prevented by omens, and the murmurs of his army, from advancing. Having embarked on the Hydaspes, he descended that river to its

INDIA. junction with the Acesines, (Chināb,) where he encountered the Oxydracæ, (Strabo, xv. 1. 33. Sudracæ, Plin. *Nat. Hist.* xii. 12. *i. e.* Súdrcas,) from whom and their neighbours, the Malli, (Mali, Strabo, *ibid.* Māla of the Hindús,) at the confluence of the Hydraōtes, (Rávi,) and the same river, he received the severest check in his progress.

INDIA.

The Panchanada, or Penj-āb, *i. e.* the country of the five streams, which are the Eastern affluents of the Sind'hu, (Indus,) was anciently inhabited, according to the *Mahā-b'hārata*, (Lassen, *Pentapot.* p. 63. 73.) by the Bāhikas, an impure race, who delighted in drinking arrack and eating beef, and, in short, were destitute of any thing like morals. Sākala, on the brook Apagā, was their Capital. They were also named Jārticā, and Arattas, *i. e.* men who had no King; their name Bāhika being derived from Bahis and Hikas, two *pisāchas* or demons, who dwelt on the banks of the Vipāsā. The Prast'halas, Madras, Gānd'hāras, with the Basātis and Sauvīras, on the Sind'hu, seem also to have belonged to the same impure race. As a disregard of caste is one of the defects especially charged upon them, they could not have been under the spiritual guidance of Brāhmans, and were therefore not Hindús.

Hindú account.

Of the Indian Peninsula the Ancients entertained the most erroneous notions. Their methods of determining the position of places, the distance and direction of routes, the bearings of head-lands, the outline of a coast, or the course of a river, were so imperfect, that even in the time of Strabo, long after an intercourse had been maintained by sea between Egypt and India, the Western coast of the Peninsula was supposed to run nearly due East and West, and its most Southern promontory was placed under the same parallel as Meroë, $16^{\circ} 42' 31''$ North. The Island of Taprobāne, (Ceylon,) which was known to the Greeks before they had discovered the Bay of Bengal, was supposed to run in the same direction as the coast, and was placed by Eratosthenes (Strabo, xv. 1. 14, 15.) at the distance of twenty days' sail from it. Hipparchus (Mela, iv. 1. 7.) supposed that it was a part of another world, (*orbis alterius*.) The expedition of Alexander, however, according to Pliny, (vi. 22.) made the Greeks better acquainted with the East, and they then learnt that it was an island. In the time of Ptolemy it was much better known; as was, indeed, the whole of the Western Peninsula, or the country between the Indus and the Ganges. The former of those rivers, he says, (vii. 1. p. 168.) flows into the Gulf of Canthus. (Kach'ha, pronounced, as commonly spelt, Cutch.) On that gulf was the emporium of Monoglossum, a word apparently of Greek origin, and perhaps a translation of the original name. Beyond it was the Gulf of Barygaza, named from a great commercial city on the river Nammadus, a little above its mouth. The modern as well as the ancient name of this place (Bharóch) seems to be a corruption of B'hṛīgugosha, (*As. Res.* x. 109.) *i. e.* the holy place of Bhrīgu, a Hindu saint.

Barygaza.

The Gulf of Barygaza was bounded on the North by the Balæan promontory; (*Βάλαιον ἄκρον*;) and Pulipula, in $112^{\circ} 30'$ East, and 16° North, (about $72^{\circ} 30'$ East, and $20^{\circ} 26'$ North,) is the last place on its Southern side. On the coast of the adjoining territory, called Ariaca of the Sadini, were, Supara, the mouths of the Goaris and the Bendas, (*Βήνδας*, the Tapti?) an emporium and promontory called Simylla, and Balipatna, (*i. e.* Bali-patana, the city of Bali,) at its Southern

The emporium of this territory was a town near the saltpetre works, (Νιτρίαι,) named from its staple produce, for which India has always been celebrated. In Limyrica, to the South of the Piratical Country, beside the city of Tyndis, we find a second Armagara, or Aramagara, the emporium of Modiris, or Muziris, and the mouths of the Pseudostomus (i. e. false-mouth) and Baris. In the land of the Aii was the emporium of the Elanci, Cottiarā, the metropolis of the country, and the promontory and city of Comaria, (Κομαρεῖ, in the Periplus of the Erythræan Sea, and Komorí, or Komari, of the Arabs, to which a nasal termination was added by the Portuguese, making it Comorim, or Comorin,) placed by Ptolemy in 121 $\frac{3}{4}$ ° East, and 13 $\frac{1}{2}$ ° North. Its true position being 77° 45' East, and 8° 4' North.	Of India beyond the Ganges very little was known, even to Ptolemy, whose information so greatly surpassed that of preceding Geographers. To the East of the Ganges he mentions (vii. 2. p. 175.) the Arradi, through whose Country the rivers Latamēda, or Cata-beda, and Tocosanna flowed into the sea. Their emporium was named Baracūra. In the Silver country were the rivers Sadus and Temala, with a city and promontory bearing the same name, stretching from 10° to 8° North. From that point began the Sarabacan Gulf, the shores of which were inhabited by Anthropophagi, called Bisyngetes,† from Besynga, their emporium; then came the river Sypa, and the city and promontory of Berabæ, supposed by M. Malte Brun (Précis, 305.) to be Point Negraïs. The Golden Chersonese, which follows, is placed by Ptolemy South of the Line, and was watered by the rivers Chrysoanas, Palandas, and Attabas, or Attas, branches springing from one great stream. (Id. p. 177.) To the North-East of this country was that of the Robbers, (Ἀγσ-τῶν χώρα,) the interior of which was entirely unknown. Beyond it, further Northward, was a Country crossed by the traders travelling to the land of the Sinæ, and traversed by a large stream called Daonas, or Doanas, supposed by Malte Brun (i. 306.) to be the Kyein Dwein, one branch of the Irawaddi, (Aīrawati,) or Great River of Ava: but many of that learned writer's conjectures are drawn from a slight resemblance between the ancient and modern names of the places mentioned; which will be thought a very insufficient foundation to build upon, when the revolutions which those Countries have experienced, and the want of any ancient monuments to prove the supposed identity, are considered. This observation, also, applies more immediately to the Countries on the East of the Ganges, the present inhabitants of which seem to have no memorials of their ancient History. Ptolemy had evidently nothing better than uncertain reports with respect to that part of the world; and his apparent precision may fairly be ascribed to a desire of making his Work appear complete, rather than to any confidence in the calculations which he made. That the Sinæ inhabited, as M. Malte Brun supposes, the Western part of Siam, (Shán, or Syán,) is not altogether improbable, though the Tzinista (i. e. Sínistán, the land of Sín, or China) of Cosmas Indopleustes (xi. 337.) seems to establish the antiquity of the term Sín, or Chin, as applied to the people still bearing that name, who are still further to the North-East. In the river Senus (Σαῖνος, in the Palatine MSS.) the same Geographer finds the river of Martaban, and the gulf bearing that name is the Great Gulf (Magnus Sinus) of Ptolemy; but the Iabadiu, (Ιαβαδίον,) which signified Barley-island, (Yava-dwípa, in Sanskrit, Jabadíú, in the spoken dialects,) could hardly be any other than Java, still celebrated for its fertility. The position of the ten islands called Maniolæ, which attracted ships by their magnetic rocks, or the three Sabadibæ, (Sava-díva?) inhabited by cannibals, is not so easily determined. Ptolemy places the latter 7°, the former 25° East of	India beyond the Ganges. Arradi. Argentes Regio. Bisyngetes. Berabæ. Chersonesus Aureus. Piratarum Regio. Sinæ. Iabadiu. Maniolæ Isles.

Coast of Coromandel	From that point, travelling Northward, we have the Colchic Gulf, named from Colchi, Coliaci, or Coniaci, a town on its shores; about one degree to the South of the mouth of the river Solen. (Σωλήνιος ἐκβολαί.) The shores of this gulf were inhabited by the Carei, and it contained the diving-place of Pinicus, (κολύμβησις Πινίκου,) probably the pearl-fishery of Manár. The Agaric, or Orgalic Gulf was separated from that last mentioned, by a headland, named Cory, or the Calligic Cape. (Κῶρυ ἄκρον τὸ καὶ Καλλίγικον.) Colis, or Colias, probably the point opposite to Rámésaram, appears to be derived from Chóla, the native name of the adjoining coast, but the resemblance is merely accidental. The Agaric, Aganic, or Argiric Gulf, named from a town on its shores, next follows, and forms a part of the Country of Pandion, (ἡ Πανδίωνος χώρα,) of which Salúr (in 125° 20' East, and 15° 30' North) was an emporium. The name of this region seems derived from the Pándavas, or descendants of Pandu, celebrated in the Mythological Poems of the Hindús. To the North was the Country of the Batæ, or Bati, whose Capital, Nigramma, had a genuine Hindí name; beyond it to the South, we find the coast of the Soringi, (Sola, Chola, or Choramandala,) where the river Chaberus, near the mouth of which there was a town bearing nearly the same name, reminds us of the Kávéri, and Kávéri-patanam, (i. e. Kávéri-town.) Further Southwards and Eastwards were the Arvares, or Arvarnes, whose emporiums, Podocé and Melangé, were to the North of the mouths of the river Tynna, beyond which was another trading place called Manaliarpha, or Manaphra. To the South and East of it Ptolemy (vii. i. p. 169.) places Mæsolia, (Maísór?) with the mouths of the river Mæsolus, and the emporiums named Contacossyla and Allossygne. On the Gangetic Gulf (the Bay of Bengal) he has Pacura, or Palura, Carinagara, the mouths of the rivers Mandus and Tyndis, Mapūra, Minagara, the mouths of the Dosaron, (Δωσάρωνος ἐκβολαί,) Cocala, and the mouths of the Adamas (i. e. Diamond River) and Cosamba. The Western mouth of the Ganges, called the Cambusan mouth, (Κάμβουσον στόμα,) was in 145° East, and 18° 30' North; the second or Great mouth, in 146° 20' East; the third or Camberichan, in 146° 30' East, and 18° 20' North; the city of Tilogrammmum (Tilagrāma?) was in 147° 20'; the fourth or

Central
India.

Having thus traced the Indian coasts as far as the Ancients had any knowledge of them, we must now return to the central regions, only a small part of which was known to the Greeks and Romans. On each side of the Ganges, the Kingdom of the Prasii (*ἡ Πρασιακή*, *i. e.* Práchi, or the Eastern Country) stretched over a great extent of land, (Plin. *Nat. Hist.* vi. 19.) and was the most powerful State, at that time, in India. Its Capital seems to have been called Baliputra, from the descendants of Bala Ráma, by whom it was inhabited; (*As. Res.* v. 269.) such at least is the probable origin of the Greek name Palibothra, or Palimbothra. (*Παλιμβόθρα*.) It was placed at the confluence of the Erannoboas and Ganges, (Arrian, *Ind.* 10. Strabo, xv. 1. 36.) the former the third, the latter the first of the Indian rivers. It formed a parallelogram 80 stadia (9 miles) in length, and 15 ($1\frac{3}{4}$ mile) in breadth, enclosed by a wooden wall pierced with loop-holes, and a ditch; its people, called Prasii, excelled all their neighbours. Of the Suraseni, (Arrian, *Ind.* 8.) the chief cities were Methora (*i. e.* Mat'hurá) and Clisobora, (*i. e.* Calisa-pura,) and the Country round those places is still called Suraséna by learned Bráhmans. The nations on the Ganges were called Gangaridæ; and of these the Southernmost were the Calingæ (Kalingas or Telingas of the Hindús.) A promontory was named from them, and near it was the city of Dandagula. Further to the West and South we find Minnagara, the residence of a Prince entitled Mambarus, (*Peripl. Mar. Erythr.* 27, 28.) which seems connected with the territories of the Mahá-Bala-Ráyás mentioned by the Arabian Geographers. In Larice, among other cities, was Ozene, evidently the Ujjáyini (Ujjeñ, or Uzeñ, in the vulgar dialects) of the ancient and modern Hindús. Syras-trene, named in the *Periplus of the Erythrean Sea*, and in Ptolemy, (vii. i. p. 172.) is the Súrashtra of the ancient Hindús, since changed into Surát; adjoining to which was the territory called Ariaca, already mentioned, which appears to have been more extensive inland than on the coast; and Dachanabades, which seems to be applied in the *Periplus* to the whole of the Western Peninsula, is evidently derived from Dakshina, (South,) changed by the vulgar dialects into Dekan and Dak'hin: and váda, or vára, which signifies an enclosure in the Tamil and Malayálim, the proper languages of that Country. The original word was, probably, Dak'hanavád, or Dak'hanwár, (*i. e.* the Southern territory,) as the adjoining Country was called Maleivár and Maleibár, *i. e.* the mountainous territory.

Natural and
Civil State.

An inquiry into the moral and civil condition of the Indians, as recorded by the Greeks, will also furnish similar results, and show such coincidences as tend to increase our reliance on the credible part of their accounts, notwithstanding their propensity to exaggeration and fables. Megasthenes and Nearchus are the great authorities from whom Diodorus, Strabo, and Arrian derived all that they have said respecting India; and those writers have not concealed the discordance prevalent in the narratives given by the followers of Alexander. Strabo, more particularly, complains of this defect, (xv. 1. 2. 37. 43. 45. 54. 68. &c.) and ascribes it to the haste with which the Country was traversed, the novelty of the objects seen, the contradictory reports received, and the credulity of the travellers themselves. Under such circumstances, it is more surprising that any

coincidences should occur, than that there should be only a few; and if there are so many points of resemblance actually verified, what would have been the case, had the contemporary Works of either nation descended to us entire? As it is, with scarcely a wreck of history written by any native Indian of that Age, and nothing but extracts from some of the Works composed by the Greeks, we see such traces of the language and peculiar customs of the Hindús, as leave no doubt of their identity with the Indians visited by Alexander; and show that a still closer resemblance would have been manifest, had a larger portion of the writings of his followers been preserved. Strabo, the most copious, as well as the most judicious of the ancient writers on India, is our best guide with respect to its peculiarities, both Natural and Civil.

The extraordinary fertility of its soil, its double harvests, great heat, periodical rains, and abundance of rivers, which rise and fall annually like the Nile; its peculiar fruits and grains, particularly rice, sesamum, bosmorum, or bosporum; (Diodorus, ii. 36.) its millet and cenchrum, (*Panicum Italicum* and *sorghum*), pulse, flax and cotton, sweet and edible bark, probably cinnamon,* and reeds (*καλαμοι*) with a sweet and nutritive juice, *i. e.* sugar-canes of extraordinary length or thickness, ratans and bamboos; (Strabo, xv. 1. 20.) all show that no change has taken place in the climate or produce of that Country since the time of Alexander. The Indian fig, or banyan-tree, with its long radicating branches, which from one parent stem forms a whole forest in a few years, was noticed by Onesicritus and others of his comrades. (Strabo, *Ib.* 21.) The tree described by Aristobulus as having siliques ten fingers long, full of a sweet but deleterious pulp, was probably the *Cassia fistula*; and the "wool-bearing tree," (*ἐπιόφορον δένδρον*), the seeds of which were enclosed by a soft substance which could "be combed like wool," was evidently a cotton-shrub: medical plants and dyeing materials (sec. 22. 30.) were then, as now, found there in abundance. Elephants, tigers, and reptiles without number, astonished the Greeks as well as the modern discoverers of India; and many even of the monsters described by them really exist, notwithstanding Strabo's disbelief, (xv. 1. 57.) being nothing more than different species of the monkey-tribe, erroneously supposed to be human beings, and misrepresented through a love of exaggeration or a reliance on reports imperfectly understood: such, for example, were the men three spans high, with two holes above the mouth for nostrils; the Enotocæti, or men who went to bed in their ears, *i. e.* whose ears were long enough to serve as bed and bedding; and the wild men who could not be brought to Sandrocottus's (Chandrgupta's) Court, because they would not eat, and therefore died by the way.

That the Physical peculiarities of India should have been so little altered, can create no surprise: but has the Civil condition of its inhabitants remained the same? Were the singular institutions of the present Hindús already established at that remote period? One of the most striking of them undoubtedly was so; for the division of the whole people into hereditary classes, or castes, is particularly noticed by the Greeks. "The whole of the Indian people," says Megasthenes, as

* But the cinnamon-tree (Strabo, *loc. cit.* sec. 22.) seems to have been confounded with the *Borassus flabelliformis*, which is still called Tára, or Tála, (*καλίσθαι δὲ τὰ δένδρεα ταῦτα τῇ Ἰνδῶν φωνῇ τάλα*, Arrian, *Indica*, 7.) by the Hindús.

quoted by Strabo, (xv. 1. 39.) Arrian, (*Indica*, 11.) and Diodorus, (ii. 40.) "is divided into seven portions or races, the first of which, that of the *Philosophers*, though least in numbers, is most considerable in dignity. They are employed privately for the performance of sacrifices and funeral rites; publicly by the Kings at the Great Annual Assembly, held at the gates either of the city or palace, at the beginning of the year, when each of the Sages declares or predicts whatever he has foreseen or observed, which may be useful or contribute to the improvement of the fruits, animals, and administration of the Government, in the ensuing year. Whoever is found to have erred in his predictions thrice, is condemned to silence for the remainder of his life; but they judge him whose predictions prove to be true, to be deserving of immunity from every tax and tribute." "The second portion is that of the *Husbandmen*, who are the most numerous and upright of all the classes. Not being liable to serve in the army or interrupted in their field-labour, they never frequent the cities, and are exempt from all public duties and offices." "Their persons and labour are inviolable," as Diodorus observes, (ii. 36.) and "it often happens that at the same time, and in the same place, one party is drawn up in battle-array and engaged with the enemy, while another is ploughing or digging without any danger, being sure of protection from the others. All the soil is considered as the property of the King, who receives a fourth of the produce as a rent from the cultivator." "The third class is that of the *Shepherds* and *Hunters*, who alone are allowed to hunt, rear cattle, or sell and let out beasts of burden. In return for clearing the land of wild beasts and birds that devour the seed newly sown, they receive a provision of corn from the King, and lead a wandering life, always living in tents. No private person is allowed to keep a horse or an elephant, each being considered as exclusively appropriated to the King, and therefore intrusted to the care of persons appointed for that purpose." "After the hunters and shepherds, comes the fourth division, that of the *Mechanics*, *Victualers*, and all who gain a livelihood by bodily labour. Of these some pay taxes and perform appointed services; others, as the armourers and shipwrights, receive food and wages from the King, for whom alone they work. The fifth class is that of the *Soldiers*, who live in idleness and drunkenness at the King's charge, except in time of war, that they may be ready to march out, when required, as soon as possible, having nothing to provide but their own persons. The sixth are the *Inspectors*, (*ἐφοροί, ἐπίσκοποι* according to Arrian, § 12.) whose business it is to inspect every thing that is done, and make a secret report of it to the King. Whether in the city or in the camp, their assistants are the women entertained there as mistresses. The best and most faithful of this class are those who are employed. The seventh are the King's *Counsellors* and *Assessors*, to whom the magistracies, judicial business, and whole administration is intrusted. No one is allowed to marry out of his own class, or follow the business or gain a livelihood by the occupation of any other; nor are any allowed to engage in more occupations than one, except the *Philosophers*, who, in consequence of their excellence, (*δι' ἀρετὴν*.) enjoy that privilege." "That class, though small in numbers," says Arrian, "being in wisdom and justice the most distinguished of all."

Magistrates.

"The Magistrates have the regulation of the markets, city, and soldiers. Some clear out the rivers and mea-

sure the land, as in Egypt, and have the care of the reservoirs, from which water is distributed to the canals, so that each person may have the necessary supply. The same magistrates have the direction of the hunters, and award recompenses or punishments to those deserving of them. They collect the taxes and superintend the workmen employed on the land, as woodcutters, masons, braziers, or smiths. They have also the care of the roads, and erect a stone at every ten stadia, (*i. e.* every half cós,) marking the cross-roads and distances. There are six companies of *ædiles*, (*ἀστυνόμοι*.) or police-magistrates, consisting of five each. Some inspect the different trades, others have the care of strangers, providing them with lodgings, sustenance, and companions, and forwarding them, or, if they die, their property, to their homes; taking care of the sick, and burying the dead. A third class of *ædiles* inquire into the births and deaths, when and where they took place, on account of the revenue, and that the births and deaths in the different ranks may not be unknown. A fourth class has the superintendence of the sale and barter of eatables, &c. looking after the measures and the goods sold, to see that no fraud is practised. The same person is not allowed to deal in more articles than one, unless he pay double duty. The fifth set presides over the sale of manufactured goods, taking care to prevent fraud, and to keep the new separate from the old; fining those who mix them together. The sixth and last are those who collect the tithe of the articles sold; a fraud on the revenue being a capital offence. Individually each has these duties to perform, but collectively they regulate both private and public transactions, the repair of works belonging to the state, prices, markets, ports, and sacred rites." "After the *ædiles*, or police magistrates, there is a third magistracy, that which has the care of military affairs. It also consists of six companies, each having five members; one of these companies is attached to the admiral of the fleet; another to the officer who superintends the yokes of oxen employed in conveying arms and provisions for man and beast, and all other necessities for the army. These also provide drummers and bellmen, grooms and engineers, and their servants. They also station the sentinels, and send out, at the sound of a bell, grass-cutters, who are trained to expedition by rewards and punishments; a third company has the management of the infantry; a fourth of the cavalry; a fifth of the elephants; a sixth of the chariots and the royal armoury; for the soldier returns his arms and accoutrements to the armoury, his horse to the mews, and his elephant in like manner."

These hereditary classes, indifferently termed divisions, (*μέρη*.) or races, (*γενεαί*.) by the Greeks, were evidently connected with the Religion of the Indians, of which the same writers say little, except that Bacchus, Hercules, Jupiter Pluvialis, or the rain-giver, the Ganges, and the local deities, (*ἐγχωρίους δαίμονας*, Strabo, xv. 1. 69.) were the objects of worship. That a near resemblance, if not a community of origin, may be traced between the Gods of Greece, Italy, and India, has long since been shown by Sir William Jones, (*As. Res.* i. 221—275,) and the identity of those named above with Indian deities, having the same attributes, seems to have appeared obvious to the Greeks. What partial alterations the Indian system may have received since the time of Alexander, it is not perhaps possible to determine; but it is certain that the Râma, Bala-Râma, and Indra, or Divespetir of the Hindús, corre-

INDIA. spond in their supposed powers and performances very closely with the Bacchus, Hercules, and Jupiter of the Greeks; while their notice of the worship of the Ganges, (Gangà,) a deity not previously known to them, shows that they inquired, as well as observed, and were not guided merely by apparent resemblances. If any inferences from the scanty notices which have come down to us were admissible, it would be that the Hindú system was more simple than it is now; and it is very observable, that of Budd'ha and his doctrines there is no mention in the earlier writers, unless he be the ancient King Budyas, (*Bouddyas*), next but one after Dionysius, (Arrian, *Ind.* 8.) who is not, however, said to have received divine honours. At a later period the deified Budd'ha was known to the Greeks, (*Bouddas*, Clem. Alex. *Strom.* i. p. 305; *Buddas*, Hieron. *adv. Jovin.* lib. i.) though little more than his name is mentioned by them. (See *Ency. Metrop.* vol. xix. p. 54.) The Greek accounts of the Gymnosophists, or Philosophers, have already been noticed under the head BRAHMAN. Their wearing no garlands when offering up sacrifices, strangling their victims instead of slaughtering them, pouring out no libations, and burning no incense, were circumstances which surprised the Greeks, (Strabo, *loc. cit.* 54.) and do not seem to agree with the present ritual of the Hindús. Their polygamy appears to have been unlimited, and the poorer classes sold their female children with a disregard of decency shocking even to Pagans; (*Ibid.* 62.) and Aristobulus (who is here Strabo's voucher) had heard, "that among some of the Indians, the widows voluntarily burned themselves with their husbands, but those who refused to do so, were disgraced." Others, Strabo adds, affirmed the same thing. On some occasions the dead bodies were thrown to the vultures, and they were very parsimonious in their funeral rites and sepulchres. (*Ibid.* 54.)

Government

The Government of the ancient Indians appears to have been generally Monarchical; though Diodorus says, (ii. 39.) that at the time of Alexander's invasion, most of the States had been for many years governed by Democracies; and Arrian, a more exact writer, expressly distinguishes (*Ind.* 12.) such as were governed by Kings from those which governed themselves. (*αὐτονομοὶ εἰσίν*.) Another peculiarity was the absence of slavery. "Of all the strange customs prevalent among the Indians," says Diodorus, (ii. 39.) "that may be considered by some as the most strange which was established by their ancient Philosophers; for it hath been enacted that there should be no slave whatever among them, and that, being free themselves, they should respect equality in all; since those who had learned neither to domineer over, nor crouch to others, would lead the best and happiest life under all circumstances. It was folly, they added, to make laws equally binding on all, and at the same time to make their condition unequal." (Arrian, *Ind.* 11.) But this abstinence from the use of slaves was mentioned by Onesicritus (Strabo, xv. l. 34. 54.) as peculiar to the Country of Musicanus; "the natives of which," he says, "live to the age of 130 years, take their meals at public tables as the Lacedæmonians do, furnishing themselves with provisions by the chase; use neither gold nor silver, though they have mines of both; study to excel in no Arts except that of medicine, for skill in some, they say, such as war and the like, only leads to mischief; punish no crimes except murder and insult, for a man cannot prevent these himself, but in contracts and agreements

National character.

each may provide for himself, so that if any one break his engagement, he is not answerable to the community, for each man should take care whom he trusts, and the Country should not be filled with lawsuits." Frugality, abstemiousness, a strict regard for truth, and fidelity to their engagements are mentioned as common to all the Indians; and however parsimonious in other respects, they were not sparing with regard to their dress, delighting in coloured robes and fine muslins, gold and precious stones, dyeing their hair, skin, and beards of various hues, and using parasols to shield them from the sun. (Strabo, xv. l. 54.) In some places there was a community of property; all tilling their ground in common, and each taking a year's supply from the common stock, the remainder of which was burned, that they might have no excuse for idleness in the ensuing year. Personal beauty was in such request, that in Cathæa, according to Onesicritus, (Strabo, xv. l. 30.) as soon as the heir to the throne was two months old, a Council was publicly held to determine whether he were handsome enough to be allowed to live, and if the President decided that he was not so, he was put to death. The King seldom appeared in public, except on three occasions; first, when he heard causes, which he did through the whole day, not allowing himself any pause for his daily frictions, which were performed by four rubbers, (*τριβέων*), while he continued to hear the suitors; secondly, when he attended sacrifices; and lastly, when he went out hunting. The royal hunting-parties were of two sorts: one, when the King was mounted on an elephant, and from it discharged his arrows at the game as it passed by; the other, when he sat on a throne surrounded by his body-guard of women, with a ring of spearmen outside, in a space enclosed by ropes; to enter which as far as the station of the women, was death; and the whole was accompanied by a band of bells and trumpets. The women were mounted, some on chariots, some on horses, others on elephants, just as in time of war, when they attended the King completely armed and equipped. These female guardians, however, possessed one dangerous privilege, for if one of them caught his majesty inebriated, and succeeded in despatching him, she was rewarded by becoming the wife of his son and successor. The King was prohibited, moreover, from taking a nap in the day-time, and obliged to change his bed-room at different hours of the night, as a protection against conspiracies; a regulation which does not seem to agree well with the accounts of the honesty and integrity of his subjects. The King and persons in power were addressed in the attitude of prayer, not by bows and prostrations.

INDIA.
Customs.

The ingenuity of the Indians in mechanic Arts, seems to have astonished the Greeks. Nearchus observes, (Strabo, *loc. cit.* sec. 67.) that in imitation of the Macedonian sponges, they made such, artificially, of hair, packthread, and cords, (*ἀρπεδόνας**) worked into wool, and then compressed into a kind of felt, made elastic, and stained of the proper colour; they soon manufactured scrapers, also, (strigils,) and cruets. (*λήκυθους*.) Cloth of a very close texture (*σινδόσι λίαν κεκροτημέναις*) was the material on which they wrote, but several authors affirmed that they could not write at all, and had

Arts.

* Probably these (*ἀρπεδόνας*) were woollen nooses, or fetlock-bands, for tethering horses and cattle, like those used by the Turks and Greeks at this day. A bull is represented on the coins of Gortyna with its four legs tethered exactly as the horses are tethered by the Turks when at grass.

no written laws. They used copper when cast, but not when hammered, because, as they said, it was then brittle; and though possessed of abundance of the precious metals, they made little use of them, not being skilled in mining. The inhabitants of the Northern mountains, called Caucasus by the Macedonians, (perhaps the Kóh Kush, or Hindú Kush of the modern Persians, and if so, to the West of the Indus,) are represented as cannibals, devoid of all sense of decency; but they, like all the remoter Indian nations, were known to the Greeks only by report; and the Hindús seem to have been always much disposed to misrepresent the character and practices of their neighbours, whom they considered as *Bléch'has*, or infidels. Thus the *Báhí-kas*, or *Arattas*, *Prast'halas*, *Madras*, and *Gand'háras*, all Tribes inhabiting the *Penj-áb*, are described in the *Mahá-b'hárata* as outlaws, utterly unprincipled, having no respect for caste, and perverting all law and justice; (*Pentapot. Ind. p. 73—76.*) so that it is possible that the Brahmanical faith might not have reached that part of India in the time of Alexander: a supposition which will account for some discordance between the accounts given by different Greek writers, and for some facts which appear to be irreconcilable to the acknowledged doctrine of the Hindú Scriptures.

Hindú divisions.

II. The natural boundaries of their Country were better known to the Hindús themselves than to the Greeks, and while they agree with the latter in making the Ocean, the Indus, and the Himálaya, their Southern, Western, and Northern limits, they more correctly draw the line on the East through the hills of Tipurah, (*Tripura*), beyond Chittagong, (*Cháti-gám*, or *gáóng*.) Hindúst'hán Proper, (*i. e.* the abode of the Hindús,) which is rather a Mohammedan than a genuine Hindú term, comprehends only the central part of India, for the principal subdivisions of it known by the natives are, 1. Kashmír; 2. the *Penj-áb*; 3. Hindúst'hán, extending from the *Sareswatí*, South of the five heads of the Indus, as far as the *Nerbedá*; (*Nerbudda*;) 4. the *Dekan*, or Southern Country, at first used to signify the whole of the Western Peninsula, but afterwards confined to the portion lying between the *Nerbedá* and *Krishna* rivers; the remainder having no single denomination, and being scarcely known to the inhabitants of the central region.

The whole extent of India, "from the source of the Ganges as far as the well-known bridge, (*Adam's bridge*), and "from the river of *Lakshmi-cula* to as far as the Ocean of the habitation of *Varuna*," (to use the words of an ancient Hindú Grant, *As. Res. i. 125.*) or, in more modern language, from the Himálaya Mountains to Cape Comorin, and from the mouth of the Ganges to *Gujarát*, appears to have been divided among ten different nations, of whom evident traces still exist. They are thus "noticed" by Mr. Colebrooke in one of his excellent contributions to the *Asiatic Researches* (vii. 219.) "in the order in which they are usually enumerated." 1. The *Sáreswata* was a nation which occupied the banks of the river *Sareswati*,* whence it derived its name. The original language of this people is probably the idiom peculiarly called *Prákrít*. 2. The *Kányakubjas* possessed a great Empire, the metropolis of which was *Kányakubja*, or *Kanoj*, in the *Dú-áb*,

Ten different nations.

* The *Sareswati*, which loses itself in the sands at *Vināsana*, nearly in 29° 20' North, and 70° 30' East, poured its waters anciently, it may be conjectured, into the *Garah*, or *Setlej*, and was the boundary between Hindúst'hán Proper and the *Pancha-nada*, or *Penj-áb*.

near the junction of the *Kálinadí* and *Ganges*. The language of this people seems to be that which formed the groundwork of the modern *Hindústání*, *Hindí*, or *Hindeví*. Its affinity with the *Sanskrit* is peculiarly striking; all its words, with a very few exceptions, may be traced to a *Sanskrit* origin, and even those which at first sight appear most different, have undergone no change except what arises from the uniform permutation of certain letters. But after tracing nine-tenths of the *Hindí* back to the *Sanskrit*, there still remains one-tenth more which is unaccounted for, and is perhaps the basis of the language. The *Hindústání*, which is nothing more than *Hindí*, upon which a great variety of words and phrases has been engrafted from the Persian and Arabic, is used as the common language of conversation among well-educated persons throughout *Hindústán* and the *Dekan*, and also by the illiterate in many parts of India. 3. The *Gauras*, or *Gaudas*, were the inhabitants of *Bengál*, and their Capital was *Gaur*, which can still be traced by its extensive ruins. Their language, the *Bengálí*, is yet spoken throughout *Bengál*, especially by the learned natives. It contains few words which are not evidently derived from *Sanskrit*, to which it bears a still closer affinity than the *Hindí*. 4. *Mit'hilá*, that is, the *Serkár* (district) of *Tirhút*, (*Tirab'hukti*), and some adjoining tracts lying below the mountains of *Népál*, and between the rivers *Kúsi* (*Kausikí*) and *Gand'hak*, (*Gand'hakí*), is the fourth of these divisions. Its language, and the character in which it is written, closely resemble those used in *Bengál*, and are, like them, merely popular corruptions of the *Sanskrit* and its letter, the *Déva-nágari*. 5. *Uteala*, or *O'dra-désa*, vulgarly called *O'rés'á*, (often pronounced *Orishá*, and thence spelt *Orixa* by the Portuguese, but more commonly *Orissa* by the other European nations,) is the territory forming the *Sábah* or *Moghul Province* of that name. It extends from *Mé-diní-púr* (*Midnapoor*) to *Mának-pattan*, and from the sea to *Sammall-púr*.* Its language and written character are both called *Uríya*, or *Udíya*, and may be considered as holding a middle place between the Northern and Southern dialects of India. The five Hindú nations, thus briefly noticed, occupy the Northern and Eastern parts of India, and are denominated the five *Gaurs*. The remainder, who inhabit the Southern and Western parts of the Peninsula, are called the five *Drávirs*, or *Drávids*. That name belongs properly to the Country terminating the Peninsula, and extending to the twelfth degree of Northern latitude, or probably along the coast as far as the mouths of the *Mahá Nanda* (*Mahanuddy*) river. The language and original inhabitants of this tract are called *Tamil*, or *Tamir*, pronounced *Tamul*. That name, however, is restricted by Europeans to the dialect used on the Eastern coast; that of the Western, and sometimes both, being termed *Malabar*, from *Malai-vár*, (*i. e.* the mountainous country,) or *Malayálam*, (tract at the mountain's foot, *As. Res. v. i.*) The *Tamul*, which is said to have an affinity with the *Télinga* and *Karnátaka*, is not derived from the *Sanskrit*, the evident source of all the languages previously mentioned, as is proved, first, by the singular circumstance that the polished and ancient

dialect (Chén or Shén tamil) is precisely that which has few if any words of Sanskrit origin; (Babington's *Gooroo Paramartan*, Pref. 1.) secondly, by its possessing originally only sixteen letters, among which are some not found in the Déva-nágari alphabet; and, lastly, by its Grammatical structure, abounding in inflexions not deducible by any rules of permutation from those found in the Sanskrit or its derivatives. (Ellis's note in Campbell's *Teloogoo Grammar*, p. 1. 23.) The Religion of the Brahmans has, however, been established for Ages throughout the Peninsula, and with it abundance of words from the sacred tongue have been engrafted upon the common idiom. It is not improbable that Drávira may properly be the name of the Family, Tribe, or Nation to which the Brahmans belonged who converted and civilized the Peninsula. Their colour is said to be lighter than that of the secular Tamuls, which seems to indicate a Northern origin; the Ancients (Strabo, xv. 13. tom. vi. p. 25, 26.) having observed the difference in that respect between the Northern and the Southern Indians. 1. The Brahmans of Southern India, according to their own traditions, came originally from Kálpí, on the Jamná, (for Jamūná,) and their dialect is called Kódun, (Kótin,) or vulgar, mixed Tamil; while those who cultivate the Shén, (Chén,) or pure Tamil, are all Súdras; the absence of Kshatriyas and Vaisyas being another remarkable fact which conspires to show that the Hindú faith was not originally prevalent in this part of the Peninsula. 2. Karnáta, or Karnára, the second of the Southern nations, has given its name to two Provinces on different sides of the G'háts; the Carnatic or Karnátaka on the East, and Kánara on the West; and its language still prevails in the intermediate mountains. A peculiar character, originally derived from the Déva-nágari, is used for writing the Karnáta; it has, of course, some affinity with those of the other Southern dialects, but bears a very close resemblance to the Télinga, used in the adjoining Provinces. 3. The country bearing that name is the third of the five Dráviras. It is sometimes spelled Taílanga, or Tilanga, and may possibly be a corruption of Kalinga, one of the Southern Kingdoms in the time of Pliny. (vi. 17. 19, 20.) It is also applied to the people, their language and character. They are spread over a large part of the North-Eastern portion of the Peninsula, and appear at a remote period to have formed a powerful State, extending far beyond the bounds of the modern Province of Telingánah. Their language is considered by Mr. Ellis (Campbell's *Teloogoo Grammar*, p. 23.) as derived from the same stock as the Tamil, though the resemblance is scarcely perceptible to a cursory observer. The two remaining Dráviras, however, belong, if their Tongue may be taken as a guide, to the genuine Hindú stock; for the language of the Maháráshtras, or Mahráttas, in the Northern part, and that of the Gurjaras in the North-Eastern extremity of the Peninsula, have not only a close resemblance to each other, but are both dialects of the Hindí, the whole structure of their Grammar being deducible from their common parent, as well as a very large portion of their words; the inflections of their nouns and verbs, their pronouns and numerals, being equally derived from the Sanskrit, and having no affinity with the multiplied and singular forms of those which may be properly called the Peninsular Tongues. 4. The Mahrátta nation was formerly confined to a

mountainous tract, situated South of the river Nermadà, (Nerbudda,) and extending to the Province of Kónkan, or Kókan, on the Western coast; and its language, though now more widely spread, is not vernacular through any great extent of country. Its written character, which is a peculiar corruption of the Dévanágari, is called Múr, and an inference thence arises, that the Country of the Mahráttas is the territory anciently called Múru. 5. Gurjara, or Gurjararáshtra, whence the modern name of Gujarát, softened by the Persians into Guzarát, is derived, does not appear to have been ever much more extensive than it is at present. Its language and written character are so nearly allied to the Hindí, that Mr. Colebrooke, whose opinion on such questions must always have the greatest weight, says, (*As. Res.* vii. 229.) "I cannot hesitate in thinking that the Gurjaras should be considered as the fifth Northern nation of India, and the Uriyas should be ranked among the Tribes of the Dakshin, (*i. e.* South.)"

The ancient History of these and the neighbouring nations is involved in great obscurity from the want of authentic documents. The Hindús, if they ever possessed any genuine Historical Works, have long since lost them; and the only clue to the events of former Ages which now remains, is the Historical portion of their Purán'as or Mythological Poems; but when it is considered that History is there given in the form of Prophecy, that the names and periods mentioned differ in different Purán'as, and that, as is usual in fabulous History, the reigns of the earlier Princes are almost all of an inordinate length, it will be seen how little reliance can be placed on such authorities. It is only when there is a general agreement among themselves, that they can be said to afford even a shadow of probable evidence, and that evidence cannot be considered as fairly admissible, till corroborated by collateral proofs drawn from other sources. The late Colonel Wilford, a Hanoverian in the East India Company's service, who devoted his leisure to the study of Indian antiquities, took great pains in collecting Historical data such as can be gleaned from the writings of the Hindús; but his method of obtaining information was unfortunately so injudicious as to expose him to impositions on the part of his native assistants; and his eagerness to discover synchronisms in the Greek and Hindú legends, made him rely too much on apparent resemblances in proper names, and he even ventured, by the aid of etymology, to create such resemblances when he did not find them. His papers, therefore, are such an amalgamation of what is fanciful and inadmissible, with what is new and really valuable, that it is no easy or agreeable task to separate the one from the other: his Chronological Tables, however, present the result of his inquiries, and the calculations by which they are supported are given at length in the accompanying papers, in which he names all his authorities.

1. The first coincidence which the Hindú legends present, is that of an universal deluge. It was foretold by Vishnu, in the Matsya avatár or fish-incarnation, that "the three worlds should be plunged in an ocean of death; but" that "in the midst of the destroying waves a large vessel, sent by" the Deity, "should stand before Satyavrata, or Menu, surnamed Vaivaswat, or the Child of the Sun, who with seven saints, (*rishis*,) together with pairs of all brute animals, should continue in this ark, secure from the flood, on one immense ocean without light, except the radiance of his holy

INDIA. companions." (*As. Res.* i. 232.) Satyavrata, therefore, is Noah; and accordingly we find him living just before the commencement of the Kali or last of the four Ages, (*Yugs*), which the Hindús believe to have taken place in 3101 B. C. fifty-seven years before the Flood, if the dates in the Samaritan Pentateuch be correct. The History of the preceding Ages is a tissue of astronomical and moral fables or allegories, which, excepting the account of the Creation, are irreconcilable to any known traditions, and are manifestly parts of an artificial system. Subsequently to the Flood, the synchronisms by which something like Truth may be obtained become more numerous; and as the period of certain History approaches, they serve to connect the History of India with that of the contiguous Countries. 2. There are probable grounds, derived from astronomical data, (*As. Res.* vii. 284. viii. 493.) for believing that the Védas or Sacred Hymns of the Hindús were arranged in their present form as early as the fourteenth century before the Christian era; and as many of the Kings named in the Mythological Poems and genealogies are also mentioned in the Védas, it is probable they lived near that remote period. The place of the colures, as recorded by Parás'ara, gives 1391 B. C. as the date of his observation. (*As. Res.* ii. 395.) Varáha Mihira, another celebrated astronomer, comparing this with the state of the heavens in his time, found that about 1890 years had passed since the time of Parás'ara. Varáha, therefore, lived about A. D. 499. He has, indeed, been supposed to have flourished at a much later period, and these results have been ascribed to a retrograde calculation, by which the former state of the heavens was ascertained and assumed as existing in the time of the writer; but independently of the want of proof under which that supposition labours, the Work containing these observations by Varáha is quoted as his, in a book translated into Persian in the middle of the sixth century, barely fifty years after the date which the observation affords. Parás'ara was the father of Vyása, who arranged the Védas in their present form, if he did not originally compile them: Vyása, therefore, may be supposed to have flourished in the middle of the XIVth century before the birth of Christ; and, as we have

already seen, the evidence afforded by those Works themselves gives nearly the same result; a coincidence which could hardly be the effect either of contrivance or accident. 3. Another epoch to which a near approximation is obtained from various independent data, is the reign of Chandragupta, the founder of a new dynasty after the death of Nanda, in whom the Kshatriya or royal race became extinct. Chandragupta, King of Práchi, a large and powerful Empire, resided at Pátalípútra, near the confluence of the Són'a, or Hiranyabáhu, and the Gangà. (Ganges.) But the Védas, as has just been shown, were probably compiled about 1350 years before the commencement of our era, and, according to the Purán'as, the royal race became extinct in Nanda 1015 years after the birth of Parikshita, a descendant in the fourth generation from Vyása, the compiler of the Védas: it may be inferred, therefore, that Nanda ascended the throne 385 B. C. He is said to have reigned 100 years, so that, allowing him a long reign, Chandragupta could scarcely succeed him later than 325 B. C., or 330 B. C., which is exactly the time of Alexander. Now we learn from the Greek Historians that a powerful sovereign, King of the Prasii, resided in Palibothra, at the confluence of the Ganges and Eranoboas, at the time of Alexander's expedition against India; and that a constant and friendly intercourse was kept up between that Prince and Seleucus Nicator, one of whose daughters he received in marriage, with an accession of territory on the Western side of the Indus, having given in return five hundred elephants. When it is added that this Prince was named Sandrocottos, (Strabo, xv. 2. 9.) or Sandrocyptus, (Athenæus, i. 15.) little doubt can remain that Chandragupta was the Indian King mentioned by the Greeks, and that another synchronism has been discovered, by which the scale of the Hindú chronology may be regulated. Taking these and a few more such coincidences as fixed points from which calculations either way may be formed, an attempt has been made in the annexed Table to show which of the most celebrated personages in the Hindú annals were contemporaries, and in what Age of our era each may be reasonably supposed to have lived.

A very brief outline of the History of India will explain and illustrate the foregoing Table.

Swáyamb'hūva, or the self-existent, is considered by the Hindús as the parent of the human race; Brahmā, the Supreme Being, in the form of Náráyana, having divided himself into two parts, or rather consisting of two parts combined, one of which was the first male, Swáyamb'hūva, and the other the first female, Sata rūpā. The Earth was then covered with primeval waters, but to the prayers of Swáyamb'hūva, a boat was granted for the abode of himself and his helpmate. Attaching his boat to the fins of a fish, (an *avātara*, or incarnation of the Deity,) Swáyamb'hūva besought the Divinity to raise the Earth from this abyss of water, beneath which it was supported on the back of an immense tortoise, *i. e.* Vishn'u (the creator) in that form, in consequence of which he assumed the shape of a boar, and raised the Earth on one of his tusks above the surface of the waters. In the boat, Swáyamb'hūva found the Védas, which had been recovered from the demon Hayagrīva, and placed there for the use and instruction of mankind, to whom they were imparted by the newly-created being under the name or title of Manu; for from them he drew the Mánava Sástra, or institutes of Civil and Religious polity, which are still the basis of all Law and Religion among the Hindús. (*As. Res.* ii. 116.) This event took place 1,840,335,770 years ago, according to their extravagant chronology: but as History, and not Mythology, is our present object, it will be sufficient merely to make a slight mention of the few circumstances which seem to point to real events, in order to hasten to the Age of Satyavrata, in which the dawn of true History may be said to arise. Priya-vrata, son of Swáyamb'hūva, divided the Earth between seven of his sons, giving, 1. Plaksha-dwīpa to Méd'há-tit'hi; 2. Kúsa to Jótishmán; 3. Krauncha to Dutimán; 4. Sákā to B'havya; 5. Pushkara to Savala; 6. Sálmalā to Vapushmán; and 7. Jambu to A'gnid'hra. The latter is India in its largest sense, or, if Colonel Wilford's conjecture (*As. Res.* viii.) be correct, only that part of it which is to the South of Dihlí; the level belt which bends round from the Indus to the mouths of the Ganges, having been anciently covered by the sea. The sons of Priya-vrata were placed by their father under the supreme command of Uttána-páda, his younger brother, and Véna, his seventh descendant, being a worthless tyrant, died without issue from the curse of Durvása and other Sages; but from his dead body they raised by their charms a son, named Prít'hu, who is considered as the first sovereign of India. As the Earth refused to grant her usual supplies, he began to beat and wound her; on which, assuming the form of a cow, she laid her complaint before the celestial Court on Mount Méru, (the Hindú Olympus,) but was repulsed on the plea that as the wife of Prít'hu, she was bound to provide him and his children with food. This fable seems to represent allegorically the transition from the pastoral to the agricultural state, and the commencement of the Arts of civilized life; an interpretation which appears to be approved by the Hindús themselves, as they ascribe the division of India into Provinces, and the establishment of useful Arts to Prít'hu. His family became extinct on the death of his fifth successor, Dakṣa; and with him the paramount sovereignty over the Earth ceased, each of the seven *dwīpas*, or islands, being thenceforward held by its own King, as an independent Prince, owing no allegiance to any superior lord. Of these Royal personages,

their seven sons, their Kingdoms divided into seven Provinces, separated by seven chains of mountains, and enclosed by seven seas; their inhabitants, who attained the age of 5000 years, and all the other marvels of those antediluvian days, nothing more need be said here, as they are either fables or allegories, and if founded on Truth, relate not to India, but to Countries beyond its limits. Jambu-dwīpa was divided by A'gnid'hra into nine portions, one of which he gave to each of his nine sons, who married the daughters of Suméru, the central mountain. His grandson, Rīshab'ha, son of Náb'hi, again subdivided his Kingdom into nine parts, but gave the whole to B'harata his first-born, who, retaining one part for his own particular territory, distributed the rest among his eight brethren, to be held as dependent Kingdoms under himself as their supreme head; from him the whole Country was called *B'hárata Varsha*, or the Country of B'harata. It was subdivided into 1. Udíchya dés'a, the Northern Region, between the Himálaya mountains and the river Saraswatí; 2. Med'hya dés'a, the Middle Region, Hindúst'hán Proper; 3. Púrva dés'a, or the Eastern Region, beyond the Gauges; and 4. Dakshina dés'a, the Southern Region, to the South of the Vind'hya range of mountains and the Nermadā river. (*As. Trans.* i. 133. 226.) In Satajit, the twenty-fifth successor and descendant of B'harata, ended the race of Swáyamb'hūva, and the first Menwantara, or period of the first Menu, which continued during 71 divine yugas, or ages, each equal to 12,000 divine, or 4,380,000 human years. (*As. Res.* ii. 112.) The second Menu was Swáróchi, the third Uttama, the fourth Tāmāsa, the fifth Raīvata, the sixth Chákusha, each presiding over a period of 71 divine yugs, or 852,000 divine years.

Over the seventh and last Menwantara, Satya-vrata, child of the Sun,* and therefore called Vaīvaswata, presides. His period is believed by the Hindús to have begun 1,230,797 years before the commencement of our era. From Ikshwáku, his eldest son, to whom the Med'hya, or central region was given, a long series of Kings was descended in a direct line, called the Súrya-vansas, as being the lineal posterity of the Sun. From his daughter Ilā, the wife of Budd'ha, son of Sóma, or the Moon,† was born Pururava, to whom a tenth part of B'hárata Varsha was given, and from whom the Chandra-vansas, or descendants of the Moon, the second line of Hindú Sovereigns, are traced. Ikshwáku was the founder of Ayód'hyā, or Aud'h, (Oude,) supposed to be the Capital of his successors for many Ages. Pratish-t'hán, or Vitura, near Lak'hnaú, was the residence of the Chandra-vansas, or Lunar branch. Among the most distinguished of the Solar branch was Harischandra, who was famed for his munificence, and extended his empire over the whole Earth. Sagara, the first of that race who reigned in the Trétá Yug, or second Age, cleared his Kingdom of the Hāñhayas, and other predatory Tribes, and introduced many improvements in the useful Arts. B'hagí-rat'ha, his descendant in the fourth degree, is believed to have brought down the Ganges into the plains, by his extraordinary penances; but few of this race are more celebrated than Dasarát'ha, the father of Ráma, who has been immor-

INDIA. talized by Válmíki in his great Epic Poem the *Rámáyana*. With the reign of Ráma the Trétá yug closed, about sixteen centuries before the beginning of our era. In the next Age, (Dwápara yug,) the Solar line became extinct, according to some of the Hindú Genealogists, (Ward, iii. 19.) but was continued for nearly thirty generations in the last, (Kali yug,) according to others. (*As. Res.* ii. 137.) The Lunar branch gave birth to Yadu and Puru, whose descendants, the Yádavas and Pauravas, had Principalities in various parts of India, and make a great figure in the Mythological Poems: but Kuru, son and successor of Samvarana, who reigned in the beginning of the Kali yug, was one of the most renowned. He removed the seat of empire from Prayága to Kuru-kshétra, or Kúr-k'hét. His immediate successor was B'híma Séna, and his great-grandson Vichitra-vírya, who, having no children, was succeeded by D'hritarashtra, one of the three sons of his brother Vyása, called Véda Vyása, from his having collected and arranged the sacred Hymns which form the Védas. Duryódhan succeeded his father D'hritarashtra during his lifetime; but a dissention having arisen between him and the five sons of Pándu, a long and bloody war ensued, which terminated in the expulsion of Duryódhan and his father, and is as conspicuous in the early History of the Hindús, as the war of Troy in that of the Greeks; for this war is the subject of the *Mahá-b'hárata*, a Poem far exceeding the *Iliad* in length, as it consists of more than 100,000 stanzas, (*As. Miscell.* ii. 307.) and which, though greatly inferior in poetical merit, is highly interesting as an Historical record, for its fictions are evidently founded on Truth. It is held in the greatest veneration by the Hindús, as they believe its author to have been inspired. Yud'hisht'hira, the eldest of Pándu's sons, having been finally placed upon the throne as successor of Duryódhan, removed the seat of Government to Indraprest'ha, afterwards called Dihlí. Parikshita, son of Arjuna, was the successor of Yud'hisht'hira. "I cannot leave the third Indian Age," says Sir William Jones, (*As. Res.* i. 134.) "without observing that even the close of it, is manifestly fabulous and Poetical; for Yud'hisht'hira, it seems, was the son of D'herma, the Genius of Justice; B'híma, of Pavan, or the God of Wind; Arjun of Indra, or the Firmament; Nakula and Sahadéva, of the two Kumárs, the Castor and Pollux of India; and B'hishma, their reputed great uncle, was the child of Gangà, or the Ganges." By the death of Kshémaka, the twenty-eighth successor of Parikshita, who was assassinated by his nobles, the Lunar race became extinct. Another branch of the same race formed the dynasty of the Váradrát'has established in Magad'ha, or Bahár, then called Kíkata, and deriving its name from Vrihadrát'ha, son of Uparichara, sixth in lineal descent from Kuru. Of these, Jará-Sand'ha, whose son Sahadéva was contemporary with Parikshita, was Mahá Rájá, or Lord Paramount of India. (*As. Res.* ix. 93.) Puranjaya, or Ripunjaya, the last and thirty-sixth King of this race, was put to death by his Minister Sunaka, who placed upon the throne his own son Pradyóta, who with his five successors formed the dynasty of the Sunakas. The accession of Pradyóta is believed to have taken place two years before the death of Budd'ha. (B. C. 544 years if the Siamese era be correct.) The Sunakas were followed by the Sísunakas, of whom Ajáta Satra was one of the most distinguished, and Udási, grandfather of Mahá Bali, or Mahá Nanda, built Cusumá-puri, or Padmá-vati, now called Patna, about 450 B. C. But Nanda, the son of

a Súdra mother, who destroyed or drove out the military caste, (Kshattriyas,) and was thence called a Súdra, was the most celebrated, his accession forming a sort of era among the Hindú Genealogists. (*As. Res.* v. 263. ix. 84. 87. 359.) He was son of Mahá Nandí, and being a great and successful warrior, subdued all the neighbouring Kings, and made himself master of the Empire of Práchi,* (the Prasii of the Greeks.) His residence was at Pátalíputra, or Patná, which extended from the modern town to the confluence of the Sóna and Ganges. (*As. Res.* iii. 26.) Mahá Nanda, or Mahá Bali, for so from his victories and paramount authority over other States he was styled, seems, at the close of a long and prosperous reign, to have fallen into a state of derangement, and was finally assassinated by his Prime Minister and succeeded by his legitimate sons, who reigned twelve years under the name of the Sumályadikas, from Sumálya the eldest. They were, however, all put to death through the intrigues of a revengeful Bráhman, named Chánakya, who placed on the throne Chandragupta an illegitimate son of Nanda, also called Maurya, from his mother Mura. He appears to have ascended the throne B. C. 315.

According to the Purán'as the ten Maurya Kings were succeeded by as many of the Sunga race, the eighth of whom was Vikrama-mitra. They were followed by four Kānwa or Kanna Kings, a dynasty terminated by assassination and usurpation on the part of the Prime Minister, as has been too often the case in Hindústán. Vikrama-mitra seems to be no other than Vikramáditya, from whom the era used in the greater part of India dates, and if so, the Kannas must have reigned in the 1st century after the birth of Christ. But a modern Historical Work by Mr. Ward, (*History, &c.* iii. 30.) makes Vishárda, one of the Nanda race, successor of Kshémaka the last of the Chandra-vansas. The Nanda dynasty, according to the same authority, terminated, after a lapse of 500 years, in Bód'ha-malla, who was despatched by his Minister Víra-váhu, of the race of Gautama. A'ditya, the last of his fourteen successors, experienced the same fate at the close of 400 years more. The Mayúras, who came next, reigned for 318 years. But in the twenty-sixth year of Rájá Pála, the last of the Mayúras, Sakáditya, a King ruling over part of the Kamáún mountains, invaded his Kingdom and expelled him from the Throne. He was, however, vanquished in his turn, after having reigned thirteen years, by Vikramáditya, who lost his life in a battle against Sálváhana, King of Pratisht'hána, (Pattan,) South of the Nermedá. (Nerbudda.) As the era of Vikramáditya dates from 57 B. C., and that of Sálváhan from A. D. 78, it is evident that these Princes could scarcely have been contemporaries, or even the immediate successors one of the other: it is probable, therefore, that each of those names stands for a whole dynasty; and it is possible that the last enumeration may belong to a part of India not noticed in the Purán'as, from which the others were extracted: at the same time it must be observed, that the latter are Works of considerable antiquity, and considered as sacred by the Hindús, while Mr. Ward is a modern compiler, whose vouchers are not mentioned by Mr. Ward. That writer, or his native authority, are

INDIA. also unfortunate in having selected from among the eight or nine Vikramādityas celebrated in the Hindú Poems and Romances, Gardab'harúpa, who is manifestly Bahrám Gúr, King of Persia; for as that Prince flourished in the first half of the VIth century, he could not be the Vikramāditya from whom the era is named. Few parts of the Hindú Annals are, indeed, more involved in obscurity than the reigns of the two Princes from whom the eras, now most generally in use, are derived. Vikramāditya and Sáliváhan (Bikrmájit and Sál-báhan in the spoken dialects) are rather titles than names, and as such applied to several different Princes; and the romantic adventures of Bahrám Gúr, (*i. e.* the wild ass,) the reputed father of a Sovereign of India, were so much to the taste of the Hindú Bards, (their only Historians,) as to have been ingrafted on the History, or rather Romance, of Kings before and after the Age of that Monarch. The reign of Sáliváhan is said, in the Purán'as, to have begun "when 3100 years of the Kali Yuga were elapsed," that is, in A. D. 1. (*As. Res.* ix. 145.) This was probably the era of his birth, and A. D. 78 that of his death. He is said to have reigned at Pratisht'hána, or Pattan, afterwards called Nehrwarah, and doubtless extended his sovereignty over the whole Peninsula. To the Kanwas succeeded the And'hras, of whom Sú Karna Déva is the most distinguished. His reign, which forms an epoch in Indian History, seems to be determined by various concurring testimonies, especially by the mention in the Chinese Annals of the death of Pu-lo-myen, the Pulomán of the Purán'as, in A. D. 648. He was the last of one branch of this dynasty, which continued for 458 years; the reign of its founder, therefore, must have begun A. D. 190. Few of the Indian Princes have had a greater diversity of names; for besides the one already given, he was called Bálin, Balihita, Báléya, Kshémaka, Sind'huka, Sipraka, Sundraka, Sudraka, and Suraka. He is mentioned in the *Mahá-b'hárata* as having dethroned his master, the King of Magad'ha, and confined him in a place amid waters. (*As. Res.* ix. 103.) He was a great conqueror, having extended his dominion over Ashám beyond the Eastern boundaries of India. (*Ibid.* 202.) Gautami-putra, who reigned about A. D. 500, appears to have been a Baudh'ha; and the only Prince of this dynasty who is recorded on account of his exploits is Pulimán, the last of them, whose piety, as ardent as his conquests were brilliant, led him to close his days by drowning himself in the Ganges. (*Ibid.* 110.) His name, which is variously written, Pulóma, Lómádí, or Lómárch'hi, is of use as it fixes the date of his reign: for the Chinese Historians, who call him Hú-lo-myen, or Hú-lo-myen-to, say that he conquered all India about A. D. 621, and died about A. D. 648. (*Deguignes, Hist. des Huns*, i. 57.) His Capital was Kia-so-mo-pou-lo, or Po-to-li-tse, that is, Kusumà-pura, or Pátalí-putra,* on the river Keng-kya, (Gangà,) or Ganges, in the Kingdom of Mo-kya-to, *i. e.* Magad'ha. The confusion and troubles which occurred, according to the same authorities, immediately after his death, exactly agree with the Hindú traditions.

Pulimán may be considered as the last King of

* *Tsě*, in Chinese, has the same signification as *putra* in Sanskrit; the former, therefore, was substituted for the latter. Pou-lo-myen-kwě, one of the Chinese names of India, is rendered by M. Deguignes Bráhma-countrý; perhaps it may mean, as Col. Wilford supposes, the land of Pulomá.

INDIA. Magad'ha, who was at the same time Emperor of all India, though the Sovereigns who reigned at Kanó, (Kányakubja,) Ujjain, (Avantí, or Ujjayiní,) D'hára, in Gujarát and other parts of Hindústán, occasionally reduced their neighbours to vassalage and assumed the title of Mahá-rájá. The Gangetic Provinces (Anu-Gangam) were subdivided into several petty States, dependent probably upon their more powerful neighbours; such as Magad'ha, or South Bihár; Mit'hilá, or Tirab'hukti, now Tirhút; Sákéta, now Aud'h, and Váránasí, Kás'í, or Benáres; Prayága, or Allahábád; Népál, and O'dra, or Udryá-désa, contracted into O'résah.

The weakness of the feudal system, except when the paramount Sovereign has a determined and enterprising character, is manifested by the facility with which first Alexander, and afterward the Musulmáns, subdued the Indian States; and, it is probable that their Princes were bound together by very feeble ties, and continually carried on a petty warfare with each other; except when united by the dread of a common enemy, or when some one fortunate competitor succeeded in reducing his neighbours to vassalage, and thence acquired a preponderance, which gave him the title of Mahá-rájá or Emperor. Such were, for a few centuries, the Sovereigns of Kanó, Dihlí in the East, those of Gwáliar, and Ujjayiní in Central India, and the Balharas in the West.

Among the most celebrated of the Rájás of Málava or Málwah, were those of the Punwár or Powár (properly Pramára) family, who, with the Cháhamána, Parihára, and Sólankí branches, all belong to the Agni-kula or Descendants of Fire, a royal race widely spread over Central India, and distinct, it should seem, from the Súrya and Chandra-vansas, celebrated in the Purán'as. The Pramáras seem to have been the first who widely extended their power; and when they were beginning to decline, the Sólankís, under the title of Ballab'hí-ráís, or Balha-rás, formed a powerful Empire in the West, of which Nehrwarah or Pattan was the Capital. To these succeeded the Cháhamána or Chóhán branch, by whom the Parihára dynasty of Mandáwar was subverted. (*As. Trans.* i. 207.) Ballab'hí, whence the Ballab'hí-ráís, so powerful at the time of the Arabian travellers in the IXth century, (*Anciennes Rel.* p. 18.) received their name, is in the Peninsula of Sauráshtra of Guzerát; and Nehrwarah, or Anharwára, from Anhalaváta, to which the seat of Government was at that time transferred, may be still traced in one of the suburbs of Pattan. They were Baudh'has, or worshippers of Budd'ha, as appears from Idrísí. (*Clim.* ii. 8. p. 62.) The Pramáras reigned at Avantí or Ujjayiní, (Ougein,) and Vickramāditya is reckoned as one of the Princes of their race, as well as B'hója, one of the most illustrious of the later Hindú Monarchs, celebrated for justice, liberality, and the encouragement of learning, who flourished, as appears from inscriptions and other data, in the middle of the XIIth century. (*As. Trans.* i. 223.)

The chief seats of the Pramáras were Avantí (Aujaín) and D'hára-nagara, (D'hár,) and their dominions extended from the Setlej, or Garah, to the Nermadá, (Nerbudda,) comprehending all the Central and Western parts of India, sometimes called Rájputáná. Their territory, a large part of which was aptly termed Marust'hálí, or the Arid Desert, was subdivided into nine Lordships, each named from its strong hold. 1. Ar-

During three reigns, the authority of the Sovereigns of Nehrwárah extended over eighteen different States; they were succeeded by the Chaura dynasty, while Dihlí was occupied by the Tuár race; Chítór (Chitra-cuta) by the Ránás; and, soon afterwards, Kanauj (Kanwajja, from Kányakubja) by the Ráhtór Rájpúts. (Rájáputras.) Of the last families were Jayachandra, vulgarly called Jay-chand, the last Lord Paramount of all Hindústán, (*Ay. Akb.* ii. 97.) whose romantic contest with Rájá Pit'hóra, (Prít'hwi Ráj,) so favourable to the progress of the Musulmán arms, is the favourite subject of the Hindú bards. Jayachandra, who reigned in the latter half of the XIIth century, having formed an alliance with Shihábu'ddín, in order to ruin Pit'hóra, mainly contributed to the success of the Mohammedans in 1192, which soon gave them the undivided dominion of Hindústán.

The encroaching spirit of Mohammedanism had brought the Arabs to India as early as the time of the Khalif Walíd, (A. D. 705—714,) and they then made themselves masters of Sind; but their incursions were not pushed to any considerable distance, nor followed by permanent possession, till after the establishment of the Turks in Ghaznah by Alptegín.* Governor of Khorásán, who rebelled against his master, the Sultán of Bokhárá. Mahmúd, the son of Nasiru'ddín Sebuktegín, the Turkish slave and successor of Alptegín, made no less than thirteen successful incursions into Hindústán before his death, A. H. 421. (A. D. 1030.) His most extensive and destructive inroad was that upon the King of Nehrwárah, in A. H. 415, (A. D. 1024,) when he plundered and destroyed the splendid shrine of Sómanát'ha, (Gibbon, x. 337.) on a promontory of Guzerát, opposite to the island of Diu. (Déó, or Déva, i. e. the Divine.) Except in the Penj-áb, however, no Mohammedan Sovereignties were yet established, and the successors of Mahmúd were merely Lords Paramount, holding the allegiance of the Hindús by a very precarious tenure. Bahrám, the thirteenth of the Ghazneví Sultáns, an enlightened patron of learning, became the victim of an undue rigour, in putting to death the Prince of Ghaur, a small territory on the North-Western declivity of Fírúz Kóh, on account of the support which he had given to the rebellious designs of his father-in-law, Mohammed Báýú Selím,† commander-in-chief of the forces stationed at Láhór. Aláu-d-dín-súrí, brother of the deceased, who boasted of his descent from Zohák, the adversary of Ferídún, hastened from the mountains of Ghaur to avenge his death, and soon compelled Bahrám to take refuge in his Indian territories, where he died, A. H. 547; (A. D. 1152;) and though his son Khosraú Shah, or Khosraú I., recovered the possession of Ghaznah, he held it only for a very short time, and in A. H. 582, (A. D. 1186,) his son

Khosraú II. was taken by stratagem, and imprisoned in a fortress on Fírúzkóh, where he was soon afterwards put to death. In A. H. 553, (A. D. 1157,) Mo'izu-d-dín Mohammed ibn Sam,* afterwards styled Shihábu-d-dín, had been appointed, by his brother, Ghayyásu-d-dín, Sultán of Ghaúr, commander-in-chief, and was, as Ferishtah observes, "in reality the Emperor," being of a far more vigorous and enterprising character than his brother. After getting possession of U'ch'h (Adja, in Dow, i. 137.) by treachery, and receiving a severe check from the valour of B'hím Déó's troops in Guzerát, he, at length, after repeated trials, succeeded, as before mentioned, in inveigling Khosraú II. into his power, and making himself master of Láhór. In A. H. 587, (A. D. 1191,) he took Tiberindah, then Capital of the Rái of Ajamér; (Ajmir;) but hearing, on his return to Ghaznah, that Pit'hó Rái, (Prít'hwi Ráj,) Prince of Ajamér, together with his brother, K'hán Dé Rái, Prince of Dihlí, were marching at the head of a large force in order to retake the fortress of Tiberindah, he hastened back to its relief, and meeting their combined forces at the village of Naráyan, on the banks of the Sersuttí, (Sereswatí,) 7 cós (about 14 miles) from Thánésar, gave them battle. His army was completely routed, and he himself narrowly escaped. In the following year he renewed his hostilities, and challenged the Hindú Rájahs to take the alternative of embracing the true Faith, or defending themselves by the sword. The Hindús prepared for a determined resistance, and met him on the same field. Having experienced their resoluteness, he, as on former occasions, had recourse to stratagem; put them off their guard by proposing a truce, and taking them by surprise, easily succeeded in completely routing their forces. Pit'hóra was taken prisoner, and soon afterwards put to death. In the following year Shihábu-d-dín established the seat of his Government at Dihlí; and in A. H. 591 (A. D. 1194) returned to Ghaznah, after defeating the army of Jay Chand, (Jaya Chandra,) Rájah of Kanój, and plundering the Temples at Benáres. According to the Hindú bards, Jaya Chandra was led by a desire of vengeance to form an alliance with the enemies of his Faith and Country, and was thus, without the same excuse, guilty of the same error as Count Julian, hastening the ruin of what he held most dear for the purpose of avenging a personal injury. (*As. Res.* ix. 171.) At the death of Shihábu-d-dín, his favourite and freedman, Kutbu-d-dín I'beg, a native of Turkistán, who was already his master's Viceroy in India, succeeded to that part of his dominions, and became the founder of the Iletmishíyyeh dynasty.† He removed the seat of Empire from Láhór to Dihlí; but it was reserved for another Tátár, or Turkí freedman, Shemsu-d-dín Iletmish, (Altumsh of Dow,) who raised himself to the Throne soon after his decease, to annex the Kingdoms of Bengál and Bahár to the Empire. This he effected in A. H. 622, (A. D. 1225,) having previously secured himself from the irruption of Jengíz Kháu by a timely submission. Násiru-d-dín Mahmúd, grandson of Iletmish, was the most estimable Sovereign who ever sat on the Throne of the Moghuls. Trained in adversity, he had learned to feel as well as to command, and owed his almost uninterrupted success to his clemency as much as to his vigour. He was both

learned and a patron of learning, as the celebrated *Tabakāti Nās'irī*, dedicated to him, sufficiently shows. On his decease, after a reign of twenty-one years, he was succeeded, in A. H. 664, (A. D. 1265,) by his Vezir and relation Belben,* a native of Karā Khatāī, and of the Tribe of Alberī. Hospitable and beneficent, a patron of the elegant as well as the useful Arts, he would have deserved unmixed praise but for the cruelty with which he punished those whom he considered as traitors. His Court was graced by many men of distinguished talents, and among others by Mīr Khosrau, the celebrated Poet; and he died in A. H. 685, (A. D. 1286,) when more than eighty years old, universally beloved and regretted by all his subjects. Fīrūz, surnamed Khiljī, from the race to which he belonged, was descended from a soldier of fortune, and paved his way to the Throne by the assassination of Kaīkobād, his predecessor, in A. H. 688; (A. D. 1289;) but he seems almost to have acted in self-defence, and was not by nature inclined to harshness or cruelty. Though seventy years old when he ascended the Throne, his lust of dominion was not repressed by age; but he readily assented to a proposal, on the part of his nephew, 'Alāu-d-dīn, to invade the Dekan. The invaders were successful, captured the fortress of Déogār†, or Tagara, and carried off an immense booty; but this success was fatal to the Emperor, for 'Alāu-d-dīn was enabled, by the treasures thus acquired, to levy a large army, raise the standard of rebellion, and depose his uncle, whom he caused to be barbarously murdered in his presence in A. H. 605. (A. D. 1296.) A reign thus begun promised little for the happiness or security of his subjects, and few of the Indian Emperors have been more tyrannical or suspicious; but 'Alāu-d-dīn was an able though an oppressive tyrant; and while, on the one hand, he extended the bounds of his Empire far beyond the limits reached by any of his predecessors, on the other he made a most gallant defence when attacked by the Moghuls, who experienced under the walls of Dihlī the severest check which they had yet sustained. His end was embittered by the treachery of his servants and the success of his enemies; and he died, after a reign of more than twenty years, a natural death, in A. H. 716. (A. D. 1317.) The Moghuls, however, though repressed, were not permanently repelled, and ten years later, in the reign of Mohammed III., Dihlī was again invested, and delivered only by the payment of a very large ransom. That Emperor, who was weak and improvident, made conquests only to lose them, and was completely routed on the frontiers of China, which he foolishly attempted to invade. Belāl-Déó, not, as Ferishtah affirms, founder of Bijānagar, or Bizānagar, (Bisnagar, from Vidyānagarī, *As. Res.* ix. 420.) but at that time a powerful Prince in the Peninsula, formed an alliance with his neighbours, and wrested from the Musulmāns all their Southern conquests, except Daūlet-ābād. On the death of Mohammed III., in A. H. 752, (A. D. 1351,) his subjects were released from the yoke of a worthless and profuse tyrant, whose vices were redeemed by scarcely one estimable quality. Hence the virtues of his successor, Fīrūz III., presented a brighter contrast. Bold and energetic, without being impetuous, more desirous of improving than of

enlarging his dominions, a judicious patron of learning, and an universal promoter of useful undertakings, no Indian Monarch has left more memorials of the wisdom of his Government, or of the beneficence of his disposition. Besides palaces and mausoleums, which might have been suggested by pride or a love of luxury, baths, caravanserāis, and public gardens attest his munificence, while forty mosques, thirty schools, and five hospitals were monuments of his piety. The hundred bridges, one hundred and fifty wells, and fifty canals, made by his command, the most striking, as the most unusual, and at the same time the most useful, of all his public works, afford a lasting proof of the enlargement of his views, and give him a just claim to the gratitude of posterity; and the restoration of his celebrated canal from Karnāl to Hānsī Hisār, bears a powerful testimony to the beneficence of the British Government. Fīrūz closed a long reign and a long life in A. H. 790; (A. D. 1388;) and when scarcely ten years more had elapsed, during which different members of his family contended for the Throne, Amīr Tīmūr, better known by the name of Tamerlane, (Tīmūr leng, *i. e.* the lame Tīmūr,) led his overwhelming armies into Hindústān, and in A. H. 801 (A. D. 1399) took possession of Dihlī. The Penj-āb, however, was the only part of India which he retained; and, excepting by a nominal vassalage, the power of the Emperor suffered no diminution from Tīmūr's success; but internal dissensions, and the evils inherent in the feudal system, were more fatal to the Sovereigns of Dihlī than the inroads of the Moghuls. Mahmūd III. died, possessed of his precarious dignity, at the close of A. H. 816, (A. D. 1414,) and with him terminated the Turkī dynasty, which had for so long a period enjoyed the supreme power in Hindústān, on a footing somewhat similar to that of the Mamlūks in Egypt.

Khizr, son of Suleīman, either nominally or really a Seyyid, or descendant of the Prophet, was confirmed by Tīmūr in the possession of the Subahdārī of Multān, which he inherited from his father; and his territories were augmented by the Viceroyalty of the Penj-āb, granted by the same conqueror. When thus strengthened, it was not difficult for him to dispossess Daūlet Shāh Lódī, the wretched phantom raised to the Throne of Dihlī by the umarā (omrahs) after the death of Mahmūd, and in A. H. 817 (A. D. 1414) he became the founder of a new dynasty, possessing all the essentials of royalty, though nominally merely the vicergerent of the House of Tīmūr. The reign of the Seyyids was of short duration. Báhlól Lódī, a Pat'hān Chief of a daring and enterprising spirit, whose grandfather, Ibrāhīm, had used the wealth acquired by commerce as a means of raising himself to the Government of Multān, taking advantage of the weakness and folly of his master, collected a powerful body of his countrymen, and was prepared at the proper moment to seize upon a Throne which its possessors evidently knew not how to preserve. The irresolution of the Emperor 'Alāu-d-dīn hastened that moment, and on the invitation of his Vezir, who found he was no longer trusted by his master, Báhlól took possession of Dihlī, and in A. H. 855 (A. D. 1451) assumed the title as well as the power of sovereignty. His son Ibrāhīm Lódī rendered himself so odious, that his Umerā, or Princes, formed a party to call in Mīrzā Bābur, a descendant of Tīmūr, and at that time Sovereign of Mávarrá-n-nahr, or the Country beyond the Oxus. A decisive battle, fought on the

D. 1526,) and the success of Bábúr's arms, placed the Moghul dynasty on the Throne of Hindústán; but another decisive engagement, fought on the very same ground 235 years afterwards, again decided the fate of India, and deprived his descendants of all but the name of their former dignity. Bábúr, who was an able and an amiable Prince, did not long enjoy his conquests; and his eldest son, Humáyún, who succeeded him in A. H. 937, (A. D. 1530,) had to contend with turbulent nobles and ambitious relations, who, after twelve years of intestine warfare, drove him into exile. The treachery of Shér Khán, the Afghán, who succeeded him, was palliated in the eyes of the Hindús by the merit of expelling a foreigner from the Throne; but his wise and beneficent measures for the convenience and security of his subjects gave him a better title to their esteem. His sons inherited neither his wisdom nor his good qualities; and Hindústán, after having been desolated for nine years by anarchy and misrule, was again placed under the sole authority of Humáyún, by the decisive victory which he gained at Serhind in A. H. 962. (A. D. 1555.) This excellent Prince, distinguished alike for personal courage, mildness, and benevolence, was killed by an accidental fall just one year after he recovered his Throne, and succeeded by his son Akbar, the most illustrious as well as the most prosperous of the Moghul Emperors, on the 7th of Rebí'u-l-evvel, A. H. 963. (A. D. 1556.)

Though little more than fourteen years of age at the time of his father's death, Akbar conducted himself, on his accession to the Throne, with a degree of prudence and dignity not to be expected at so early a period of life. He was placed under the guardianship of Behráw Khán, an able but ambitious and overbearing man, who, with a ward of less discretion and talent, would have either left him nothing but the shadow of authority, or have involved the Country in a deeper labyrinth of anarchy and confusion than that from which his talents, directed and checked by the firmness of Akbar, effectually rescued it. When no longer under the guardianship of Behráw, that Prince studied to consolidate and secure his territories, by granting a complete toleration of the different Religions professed by his subjects, promoting the intercourse of the Provinces with each other, and providing for the administration of justice without offending the prejudices of the Hindús. Before the fortieth year of his reign, Kashmír, in the North, and Khándesh, Télingánah, with a portion of Berár, Golcondah, and Daúlet-ábád, in the South, (Dekan,) had been added to his dominions; but he never succeeded in subjecting the whole of the Dekan, nor did the Southern part of the Peninsula ever form a part of the Moghul Empire. Though not at all deficient in personal courage, Akbar wisely committed the care of his military expeditions to his sons and the Viceroys of the Frontier Provinces, reserving for himself the general direction of the whole, and the superintendence of the Civil administration. Exact registers were kept of the revenue of every Township, and of the troops employed in each District; the number of officers employed, and the regulations observed in every department of the administration were also accurately recorded, and the whole embodied by his Vezír, Abú-l-fazl, under the name of the *Ayín Akbarí*, or *Akbarian Register*, furnishes the most valuable materials for a statistical account of India. The mag-

nanimity, as well as the firmness and sagacity of this Prince, was called forth by the conduct of Behráw Khán, whose domineering spirit hurried him into acts of rebellion, when he found that Akbar was determined to be really and not nominally Sovereign. Under the colour of a pilgrimage to Mecca, Behráw collected an armed force, and openly bade defiance to his master. He was, however, soon overcome, and instead of being pursued as a rebel, was kindly received and forgiven by Akbar, who provided him with a princely retinue to escort him on his pilgrimage. Abú-l-fazl, the other illustrious Vezír of this Emperor, was worthy of the favour which he so long enjoyed; and if Akbar was fortunate in possessing such a minister, Abú-l-fazl was happy in having a master who so well understood the value of his talents. While the enlarged and benevolent views of this Emperor secured for him the affections of his subjects, the vigilance and activity of his administration repressed the turbulent, and afforded a security of person and property rarely enjoyed under a feudal Government. Never, therefore, was commerce in a more flourishing state, or industry more certain of its reward; and though he maintained a force of not less than 600,000 men, his treasury was never exhausted, for his annual receipts rarely fell short of £50,000,000 sterling.

Akbar was born while his father was in exile at the Court of Ajmír; he may, therefore, be considered as trained in the school of adversity, and to that, in conjunction with his own good sense and excellent disposition, may be ascribed the success and ultimate tranquillity of his long reign. He seems to have been entirely free from the influence of caprice, by which, from early habits of unrestrained indulgence, despotic Princes are so often enslaved; and though something may be ascribed to his good fortune in possessing such able ministers, much more is due to his own perseverance in maintaining them in their posts, and guarding himself against the artful misrepresentations which envy and jealousy never fail to insinuate into a Sovereign's ear.

After the death of Akbar, in Rabíu-s-sání, A. H. 1014, (July 1605,) his only surviving son, Selím, ascended the throne, and assumed the title of Jehángír. (Conqueror of the World.) He had either more violent passions, or less self-control than his father, and therefore soon stained his hands in innocent blood; first, by sacrificing the husband of the beautiful and accomplished Núr Jehán, (Light of the World,) who had long been the object of his affections. His ardent passions not only made him her slave, but diverted his attention from the duties of his exalted station, and prevented him from making the proper use of his abilities, which were considerable. His father-in-law, Shér-áfkan, however, otherwise called Ayyàs, by birth a Tátár, who, with the title of *Ítimádu-d-daulah*, was his Prime Minister, treading in the steps of Akbar and Abú-l-fazl, made ample amends for the negligence of his master, and drew down upon his head the blessings of his subjects. The same toleration, the same encouragement of commerce, and a still greater attention to the improvement of agriculture, were still maintained; and it was probably with a view to profit by the rivalry of different European nations, that the English were allowed to establish a Factory at Surat, though the territory acquired by the Portuguese in Guzerát had

already attracted the notice of the Court. The latter part of Jehángir's reign was embittered by the rebellious conduct of his son Mohammed, afterwards called Sháh Jehán, who found ready and willing agents among the feudal Chiefs, on whom the greater part of the Empire had been bestowed. The vigilance and severity of his father, however, effectually barred his success, and Jehángir died a natural death, while on his march into Kashmír, in the month of Sefer, A. H. 1037, (A. D. 1627,) after having reigned twenty-two years.

Soobar,
Circars, and

The History of India during the subsequent reigns is so intimately connected with that of Great Britain and other European States, that it is unnecessary to enter upon it here; and as the reader has seen the origin and gradual formation of the prevailing divisions in Hindústán, he will be prepared for some general remarks on them, and a more particular account of such Provinces as have been omitted, or only slightly noticed in this Work. In the fortieth year of Akbar's reign, (A. H. 1002, A. D. 1594,) his dominions were subdivided into twelve Provinces called *Súbahs*, each governed by a *Súbah-dár*, containing 105 *Serkárs* or Districts, and 2737 *Kasbahs*, or Townships, producing an annual revenue, as fixed for ten years, of 3 arbs, 62 karór, 97 laks, 55,246 dams, (929,755,246,) or 9,07,43881 sik-kah rúpíyahs, 2 ánás, and 5 paísá, (nearly £4,600,000.) The *Súbahs* in the time of Akbar were, 1. Allah-ábád: 2. Agrah: 3. Aúd'h, or Awad'h: 4. Ajmír, or Ajamer: 5. Ahmed-ábád, or Gujarát: 6. Bahár: 7. Bengál: 8. Dihlí: 9. Kábul: 10. Láhúr, or Láhaúr: 11. Multán: 12. Málwah: 13. Berár: 14. Khándésh, and 15. Ahmed-nagar, or Aúreng-ábád. The Southern States, which were not annexed to the Empire till the reign of Aúreng-zéb, were divided into three *Súbahs*: 1. BÍjá-púr: 2. Mohammed-ábád, or BÍder: 3. Haider-ábád. These Provinces contained 61 *Serkárs*, and, according to the Mahrattah Records, produced a revenue of 8,11,30,877, rúpíyahs. Of these Provinces separate accounts will be found under their proper heads; and as additional information respecting AGRAH and ALLAH-ABAD has been obtained since the former part of this Work was published, a fuller and supplementary account of those important *Súbahs* may properly be added here.

Agra.

The *Súbah** of AGRAH is bounded on the North by Dihlí, on the West by Ajmír; on the South by Málwah, and on the East by Aúd'h and Allah-ábád. It is about 250 miles long, and 180 broad, and is subdivided into the following Districts: (*Serkárs* :) 1. Agrah: 2. the Dó-áb: 3. Itáwá: 4. Farrokh-ábád: 5. Kálpí, Góhad, and Gwáliár: 6. B'hart-púr: 7. Alvar and Mácherí: 8. 'Ali-gar'h: of these Itáwá, Farrokh-ábád, and 'Ali-gar'h are comprehended within the Dó-áb, and have been already described. (Dooab, Gualior, Calpi.) The river Chanbal, which traverses this Province in all its breadth, divides it into two nearly equal parts, and separates the bare and level country on its Northern, from the woody hills on its Southern side. Placed between 25° and 28° North latitude, its climate is more temperate than that of Bengál, or most parts of the Peninsula; but hot and suffocating winds are occasion-

* *Súbah*, in Arabic, means a large heap of grain, dates, or other produce, and thence a granary or storehouse; so that the term was perhaps used in its present sense, because there was a large public granary in the chief city of each Province.

ally felt, and the air of the woody districts is, as usual, unhealthy. The streams are not very numerous, and the fertility of the country, from want of means of irrigation, depends much upon the periodical rains. Indigo, cotton, and sugar are the kinds of produce for which the soil is best suited, and agriculture, even in the districts under the native Governments, is increasing. As this Country is not mountainous, mineral productions are neither found, nor to be expected, in any quantity, and its animals are similar to those of the neighbouring Provinces; but its horses are esteemed superior to any bred further East, except those from the Company's studs. Coarse cottons are the staple manufacture, and the raw produce, mentioned above, is exported in considerable quantities. The British districts are far more populous than those subject to native Princes, but the population of the whole Province probably does not exceed eight millions. The Country to the East of the Jamuná (Jumná) is immediately under the Presidency of Bengál. The tracts to the South of the Chanbal, with the exception of Kálpí, are a part of the territory of Daúlet Ráo Sínd'híá. The Country to the North-West of Agrah comprehends the domains subject to the Rájás of Mácherí, and B'hart-púr, and many petty independent Chiefs; all under the protection of Great Britain, and prevented by the Government in Bengal from continuing the intestine feuds which so long desolated their country. The natives are generally handsome and robust; and are for the most part Hindús or Mohammedans, with a few Sik'hs. Of the first, many are Játs and Méwáties, the latter of whom celebrated for their predatory habits; and the universal prevalence of the Hindú Faith is a striking evidence of the inefficiency of compulsion to produce a change in long-established opinions and prejudices. The Persian may be termed the official language of this Province; it is also spoken by the higher classes, and next to it the Hindústání, or the Hindí, is the common medium of intercourse both among Mohammedans and Hindús; the Braj, or Brij-b'hákhá, (Vraja-b'háshá,) a cultivated dialect of the Hindí, is also spoken from the neighbourhood of Agrah to the Vind'hya mountains.

The district of Agrah extends along the banks of the Jamuná, from Kósí to its junction with the Chanbal. Díg, B'hartpúr, D'hól-púr, Bárl, and Rájá-kérá, are its Western boundaries. The neighbourhood of native Principalities, where banditti and freebooters find a ready asylum, is a great check on the improvement of this country. The jurisdiction of Chatá, on the borders of Dihlí and the dominions of the Nawwáb Ahmed Bakhsh Khán, has 175 villages, but they are separated by thickets favourable to robbery and insubordination. Kósí is a large commercial and wealthy town. Nand-gáo and Barsáná are much frequented as places of pilgrimage. Sónk is a considerable frontier town. Mat'hurá (Muttra) and Bindrában (Vrīndávan) are celebrated Hindú sanctuaries, and thence populous and flourishing; and by the erection of gates at the end of the principal streets, their police has been much improved. Highway robbery, the most prevalent crime, is with difficulty repressed. In 1813 this district contained 1,222,667 small big'hahs of land in cultivation, yielding a revenue of 1,425,802 rupees, (£720,000,) 330,807 big'hahs fit for cultivation, and 902,740 entirely waste.

Agrah, the Capital of this Province, is situated in 27° City of Agṛa

INDIA.

INDIA.

11' North, and 77° 53' East, on the Southern bank of the Jamunà, which is there of a very considerable breadth, and never fordable. It was the favourite residence of Akbar, and, on that account, called *Akbar-ábád*, (Akbar's abode,) and its former extent and splendour are manifested by the ruins with which it is surrounded; but the greater part of it is now uninhabited, and, excepting that which leads from the fort to the Mat'hurà gate, its streets are as narrow and inconvenient as those of most Asiatic towns. The citadel is a large fort of red sandstone, from the quarries near Fatah-púr, strongly fortified in the Indian fashion, and, as such, still tenable against a native force; but the *Táj-mahall* (Diadem of the Place) is the most remarkable of all its public edifices. It is a mausoleum formed of white marble like that of Carrara, and erected by Sháh Jehán in honour of Núr Jehán Bégum. Its general beauty is still unimpaired; and from the airy lightness of its minárahs, contrasted with the ponderous grandeur of its gateway, mosque, and *jamá'at-khánch*, (hall of assembly,) it is altogether one of the finest specimens of Mohammedan architecture existing in India. The rows of lofty cypresses and fountains, which render the great square in front of it an agreeable place of resort, are kept up at the public expense. The *Múti mesjid*, or pearl mosque, a small but exquisitely finished building of white marble, the *Jámi mesjid*, or principal mosque, the great square, (*chaúk*.) and the tomb of I'timádu d-daúláh, with its delicate lattice-work and rich mosaics, are lasting records of the wealth and piety, as well as of the taste and skill, of the Moghuls, and still render Agrah one of the most splendid cities in Asia. But the form, extent, and magnificence of the city, is best estimated by the prospect from one of the minarets of Akbar's Mausoleum at Sikandarah, six miles to the North of the present town. From this the spectator looks over a level of not less than thirty miles in a straight line, covered with ruins. The present population of Agrah is of a very small amount compared with the multitudes it contained when that area was covered with habitable buildings; and it has not yet probably risen to 100,000, though the tranquillization of Rájputánah had, eleven years ago, (in 1818,) occasioned a very rapid increase in the amount of the Customs, and no doubt a proportionate augmentation in the numbers of the inhabitants. Agrah came into the possession of Great Britain in 1803, and has since that time been the head-quarters of a large military corps, as well as the residence of a Civil magistrate and collectors of revenues, subordinate to the Court of Circuit at Bareilly.

Futtipoor.

Fatehpúr, (more properly Fat-h-púr, *i. e.* the City of Victory,) called Sikrah, to distinguish it from another town of the same name, is now a mere village, though the area, surrounded by its embattled walls, built by Akbar, is very large. It is in 26° 6' North, and 77° 34' East, and is remarkable on account of the sepulchral chapel of Sháh Selím Chístí, a Mohammedan saint, to the efficacy of whose prayers the birth of Jehángír was believed to be due. Within the sacred enclosure surrounding the *turbeh*, or chapel, many of Akbar's family lie interred; and there are several beautiful specimens of the Saracenic style of architecture among the Palaces and monuments erected in the reign of Akbar, who was much attached to this place.

Muttra.

Mat'hurà, on the Western bank of the Jam'nà, in 27° 31' North, and 77° 33' East, is celebrated in the

Hindú legends as the scene of Krishna's early adventures, and as one of the first shrines plundered by the Musulmáns, having been destroyed by Mahmúd, Sultan of Ghaznah, in A. D. 1018. Under Aúreng-zéb it was again the object of similar zeal; and from the materials of the finest Temple erected by Vira Sing'ha Déva Rájá, of Uchch'ha, who restored the shrines after the devastation of Mahmúd, was a mosque built by order of that bigoted tyrant. Another curious relic is the Observatory erected in the fort by Jay-Sing'h Rájá of Jay-púr, or Jay-nagar. A place held so sacred, and so intimately connected with the legends of idolaters, could not fail to provoke the hostility of fanatical Musulmáns; and after having suffered so much in more barbarous Ages from that cause, the inhabitants of Mathurà were again the object of a general massacre by Ahmed Sháh, the Abdálí, in 1756. The town was afterwards granted by the Sínd'híás to General Perron, commander in chief of their forces, but was taken by the British troops, without resistance, in 1803, notwithstanding the additional works with which the fortifications had been strengthened: it has since that period been the head-quarters of a brigade stationed to the South of the city. The sacred monkeys, bulls, parrots, and peacocks, with which it abounds, as well as the *cade* fish in its streams, cannot fail to remind the classical traveller of the XVth *Satire* of Juvenal.

Bindrában, (from Vrindávana,) *i. e.* the Grove of Tulasi trees, (*Ocymum gratissimum*.) is a large town on the Western bank of the Jam'nà, on 27° 34' North, and 77° 34' East, on the spot which, according to the Purán'as, was the scene of Krishna's infancy and youthful days, and of his revels with his beloved Rád'há.

Where Gópa's lovelorn daughters rove,
And hurls his azure stream amain.

Few places have been more completely hallowed by superstition, or possess more striking monuments of mistaken piety. The great Pagoda in the shape of a cross; the various pools (*kunds*) sacred to Rád'há, Syáma, and Jayácha, the waters of which cleanse from internal as well as external pollutions; the *ghát*, or landing-place, where Krishna destroyed the hydra; the *kadamba*, (*Nauclea Orientalis*.) under which he played upon his flute; the overhanging mount, *góverd'han*, with which he protected the herdsmen from the overwhelming showers from heaven, (Indra,) and his favourite retreats in the adjoining woods, are devoutly visited by pilgrims, and becoming the abodes of *chóbís*, *i. e.* religious mendicants; the only part of the population who showed a disposition to oppose the measures taken, in 1812, for the purpose of aiding the police in checking the frauds and depredations so easily committed, and so difficult to repress, where such vast crowds are continually brought together.

Góhad, the Capital of a district in the Province of Agrah, in 26° 24' North, and 78° 70' East, was an insignificant village belonging to the district of Gwá-líár, at so late a period as the middle of the XVIIth century; and its *Zemíndár*, or landholder, was a Ját of the Bámrolí Tribe. In the period of anarchy and confusion which followed the death of Aúreng-zéb, his

INDIA. successors became independent Chieftains, and assumed the title of Ráná. B'hím Sing'h, who was reigning in 1761, made himself master of Gwáliár, but it was retaken by Mad'háji Sínd'híá. in 1784. At the close of 1805, the Ráná relinquished the fort and territory of Góhad, and received the districts of D'hól-púr, Bári, and Rájá-kérá, yielding an annual revenue of about 400,000 rupees, in perpetual sovereignty. Góhad has since that period been generally tributary to Daúlet Ráo Sínd'híá. Though hilly, it has a fertile soil, along the course of the Chanbal, and in 1805 produced a revenue of 18 laks (£198,000) per annum, 9 of which were appropriated to the payment of the subsidiary force furnished by the British Government.

Játs.

B'hart-púr, (from B'harata-pura, the city of B'harat,) the Capital of a small State, and celebrated as one of the strongest fortresses in Hindústán, is in 27° 17' North, and 77° 23' East, and commands a territory which contains about 5000 square miles, being rather larger than that of the Rájá of Mácherí, and forming the Western boundary of the district of Agrah. B'hart-púr, Díg, Kómb'hér, Weír, Karná, and Biyánah are its chief towns; and the latter is its Southern, as Gó-pál-gar'h, a strong fort, is its Northern boundary. From Díg to B'hart-púr, the country is inundated in the rainy season. It is inhabited by Játs, a low Tribe of Súdras, very different from the Játs, or Jats of the Penjáb, who are Mohammedans. In the latter end of the XVIIth century they migrated from the banks of the Indus, in lower Multán, and settled near the Ganges and Jam'ná. The Civil wars which arose shortly afterwards, were favourable to their predatory habits, and they soon acquired treasure and territory by their plundering excursions. Chará-man, who erected the fortress of B'hart-púr, derived his funds from the pillage of Aúreng-zéb's army on its march, in his last expedition to the Dekan. Súraj Mall, one of his successors, was killed, in A. D. 1763, in an engagement with Najaf Khán; and when his son Jíwár Sing'h was murdered, in 1768, the Ját territory extended from Agrah to Dihlí one way, and to Itáwah another, besides having a tract South of the Chanbal, and possessing three fortresses, believed to be impregnable; but in 1780 Najaf Khán succeeded in subduing the greater part of that Country, leaving the Rájá little more than B'hart-púr, and a domain producing about 7 laks of rupees (£77,000) per annum. In 1803 an alliance was formed between Ranjít'h Sing'h, then governing this petty State, and Great Britain, and districts producing an annual revenue of 7,54,000 rupees (£82,500) were ceded to it. The Rájá, however, violated his engagements in 1805, by receiving into his fortress Jeswant Ráo Hólkar, the Mahrattah Chief, who had just been defeated by Lord Lake. The town and fort, about eight miles in circumference, were strongly fortified by a mud-wall of great height and thickness, flanked with bastions, well provided with artillery, and enclosed by a very wide and deep ditch. The great extent of the town, the strength of the garrison, the abundant provision of stores in the magazines, and the facility with which supplies were obtained from without, as the besieging army was too small to invest the place, all gave a great advantage to its defenders, who maintained their post with great resolution. The perseverance of the British commander, however, induced the Rájá to capitulate; and a second Treaty was signed on the 17th of April, 1805, by which the ceded territory

INDIA. was resumed, the Rájá engaged to pay 20 laks (£220,000) as an indemnity, and to deliver up his son as a security for his future good conduct. The necessity of such measures was clearly manifested by the continual encroachments which he attempted to make; his immediate submission, however, when he apprehended that force would be used, prevented the necessity of having recourse to arms, and he died in the peaceful possession of his domain in 1824. The capitulation of B'hart-púr is memorable in the History of our wars in India, as having been purchased at the severe price of no less than 3100 men killed and wounded. In 1824, Balwant Sing'h, a boy only seven years old, succeeded to the Throne, on the sudden death of his father, and was placed under the guardianship of his mother and uncle; but early in the following year, they were attacked by one of his cousins, Darjant Sál, who murdered the uncle, and took the Rájá prisoner. As negotiation was attempted in vain, it was necessary to have recourse to more effectual means, and the place was captured by storm, after a siege of six weeks, on the 10th of January 1826, with the loss of 103 killed, and 466 wounded, while the garrison lost about 4000 men. Darjant Sál and his family were taken, while flying, and imprisoned at Allahábád. The fortifications were destroyed, and the other strong holds in the neighbourhood occupied, without resistance, by British garrisons.

Díg, situated in 27° 30' North, and 77° 12' East, was strongly fortified by Rájá Súraj Mall in A. D. 1760, and captured by the British troops in 1806. It is in a hilly country, liable to violent and sudden inundations from mountain torrents, against which the town is preserved by large embankments. The remains of some very fine Palaces and Gardens show that it was anciently a place of importance.

Kómb'hér, in 27° 17' North, and 77° 14' East, is remarkable on account of its saline wells, from which large quantities of the kind of salt called *balambah* are extracted. It is of a fine grain, and is much used in upper Hindústán.

Biyánah, (Byáná,) in 26° 57' North, and 77° 8' East, was the Capital of the Empire before the Emperor Sikander (Alexander) Lódí (*Ay. Akb. ii. 37. 106, 107.*) made Agrah the royal place of residence. It was conquered by the Musulmáns A. D. 1197, and is still a large town; but the hill, at the foot of which it stands, is also covered with ruins, and shows what its magnitude once was. A high pillar in the fort, which was repaired in 1820, is conspicuous at a great distance. It was famous in Akbar's time for its mangoes, the whiteness of its sugar, the water of a well with which the *gandórah* cakes were made, the excellence of its indigo, and the high colour of its *hinná*. (*Lawsonia inermis.*) There were mines of copper and turquoise-stone in its neighbourhood, but they were no longer worked.

Tijárah was, in the time of that Prince, a *serkár* or district, measuring 740,000 *bíg'hahs* and 5 *biswahs*, (1952 square miles,) and yielding a revenue of 1,770,460 *dáms*. (£5200.) It contained 18 *perganahs*, or townships, and furnished 1227 horse and 9650 foot soldiers. (*Ay. Akb. ii. 219.*) Its territory is now divided among the neighbouring Chieftains. The town so named, which was the Capital of Méwát, is in ruins, but the fort is kept in repair in order to curb the neighbouring mountaineers.

Mácherí, a Principality in the North-Western

Macherry,
or Mewat.

INDIA. angle of the Province of Agrah, is frequently called Mewat. Mewat. Mewát, and its inhabitants Mewáties, though that is properly the name of a particular Tribe. It is a tract of woody hills, separated by low lands from the Jam-nà, and nearly equidistant from Agrah and Dihlí Westward. The ferocity and predatory character of its inhabitants are almost proverbial; nor was it till a very late period that it formed a separate State. Pertáb Sing'h, agent at Mácherí for the Rájá of Jay-púr about A. D. 1780, revolted from his master, and obtained a grant of lands from Najaf Khán, with the title of Ráo Rájá. He soon afterwards wrested Alvar from the Rájá of B'hart-púr, then at war with Najaf Khán. The latter, with whom Pertáb imprudently quarrelled, drove him out of all his possessions, except Lakshmangar'h, and would have entirely ruined him, had not his attention been drawn away by more formidable opponents. Pertáb, therefore, recovered his power, and by temporizing, escaped the hazards to which the unsettled state of the neighbouring Countries exposed him. In 1803 he placed himself under the protection of the British Government; and in 1805 was rewarded for fidelity to his engagements, by a considerable addition to his territories, taken from those of B'hart-púr. At first, the Government of this little State discouraged agriculture, in order to avoid offering any temptation to its more powerful neighbours, but since the reduction of the great Mahrattah Chiefs has put a stop to the internal warfare maintained by their system, the Mácherí Rájás have promoted the improvement of their territory, and in 1823 few Countries in India were in a more flourishing condition. It consists of about 3000 square miles, and contains the towns of Alvar, Mácherí, Tijárah, Rájgar'h, and 'Alí-nagar, or Ghósálí. The Lásvárí, its principal river, was formerly lost in the sand, but is now by means of an embankment conducted in various channels, so as to irrigate most parts of the Rájá's and the B'hart-púr domains. The second range of mountains beyond Alvar is inhabited by Mewáties, renowned for their turbulence and insubordination. In 1807, their predatory incursions had rendered the high-road from Réwári to Dihlí impassable. A band of these robbers, who are called *kazáks*,* attacked Réwári, and, being well mounted, escaped with impunity. The difficulty of driving them from a country so full of defiles and fastnesses, rendered conciliatory measures the more desirable, and their fidelity, when their word is once pledged, rendered the success of such a method highly probable; in 1807, therefore, the British Resident at Dihlí opened a correspondence with some of their Chiefs, which terminated in the establishment of such amicable regulations as greatly repressed, if they did not entirely extinguish, the habits of rapine which render these Tribes such dangerous neighbours.

Alwur, or
Alore.

Alvar, Alwar, or Alór, the Rájá of Mácherí's Capital, in 27° 44' North, and 76° 32' East, is strongly fortified, and placed at the base of a steep hill, on the summit of which there is a fort, well supplied with water. The family of the Rájá is generally lodged in Rájgar'h, (Fort-royal,) a strong hold in the neighbouring mountains.

Macherry.

Mácherí, whence the Principality receives its name, is in 27° 31' North, and 76° 22' East, separated by a

range of hills from Rájgar'h. It was once a place of considerable extent, but is now little better than a heap of ruins.

INDIA.

Firúz-púr, in 27° 58' North, and 76° 39' East, is the capital of Ahmed Bukhsh Khán, whose territory consists of the *perganah* of that name, together with Nagínah and Púnahará, and the *ta'alluks* of Bíchór and Sakrás; these were anciently a part of the Country called Mewát. The small *perganah* of Láharù, in the Shikáwatí territory, formerly belonging to the Rájá of Mácherí, is also held by him as a *jágir*, (feudal tenure,) at a fixed rent in perpetuity. The town is surrounded by a stone wall.

Feroseepoor.

Nárnól, a district which, in the time of Akbar, contained 17 *mahalls*, measured 2,080,046 *big'ahs*, and yielded a revenue of 50,046,711 *dáms*, (£147,200,) furnishing 7520 horse and 37,220 foot soldiers, is at the North-Western extremity of the Province of Agrah on the frontiers of Jay-púr. The town of Nárnól, in 28° 5' North, and 75° 52' East, now much reduced, has a *nálá*, or brook, running through it.

Narnoul.

Kánún is the chief town of a *perganah*, on the borders of the Desert, in 28° 18' North and 75° 51' East. Three miles to the East of it are sand-hills, covered with brushwood, gradually becoming more and more bare, till they are naked undulations of loose sand, furrowed by the wind like drifted snow. Ten miles beyond Kánún, in the same direction, begins the Rájput territory, called Shikáwatí. In 1805, 1,47,000 (£14,700) rupees were offered to the Government for the three *perganahs* of Kánún, Kátic, and Nárnól.

Canoon.

Narwar, or Nara-vara, on the East side of the Sind'h, in 25° 40' North, and 77° 51' East, is the Capital of a district in a hilly and woody, but fertile tract. It was taken by the Musulmáns in A. D. 1251, and in 1809 was guaranteed by the British Government to Rájá Ambáji Ráo, its revenues being estimated at 10 laks of rupees (£110,000) per annum. It was, however, in 1810, surrendered to Daúlet Ráo Sínd'híá, by whose agents the garrison had been bribed.

The Súbah of ALLAH-ABAD, Iláh-ábád, or Iláh-ábás, which in the time of Akbar, (*Ay. Akb. ii. 30. 201.*) contained 10 *serkárs* and 177 *perganahs*, yielding a revenue of 5,310,695 *sikkah rupiyahs*, (£531,061,) with 1,200,000 betal-nut leaves, and maintaining 11,375 horse, 237,870 foot soldiers, and 323 elephants, was augmented in the time of Aureng-zéb by the tract called B'hattah, or Bánd'hú,* a part of Góndwánah, comprehending the six jurisdictions of 1 B'hattah; 2. Sónág-pur; 3. Ch'hatís gar'h, or Ratn-púr; 4. Samb'hal-pur; 5. Gang-púr, or Pádá; and 6. Jash-púr, an area of 25,000 square miles. (See GOANDWANA.) This Province is at present divided into eight Districts. 1. Allah-ábád; 2. Benáres; 3. Mirzá-púr; 4. Jaún-púr, or Jóán-pur; 5. Réwáh; 6. Bundél-k'hand; 7. Khán-púr; 8. Mánik-pur. Of these Allah-ábád and Khán-púr are included in the Dó-áb. (DOOAB.) Bundelk'hand (BUNDELKUND) long formed a separate territory; and BENARES is the fountain head of Hindú learning. An account of Mánik-pur and Réwáh will be given under their respective heads.

INDIANA.

INDIAN Rubber, so called from the purposes to which it is usually applied, the erasure of pencil marks, &c. by friction, is properly the dried juice of the *Siphonia Elastica*, referred by Martin, in his Edition of Miller's *Gardener's Dictionary*, to the genus *Iatropa*, a large and branchy tree which grows in Brazil, Quito, Guiana, and all that portion of Tropical America. The Carib name of this tree is *Caúchúc*, corrupted into *Caoutchouc*, and written by Willdenow, after the Spanish manner, *Siphonia Cahuchu*. In Para it is called *Massaradub*. In the Province of Emeralds, to the North of Quito, *Hheve*. Many other trees, in other Countries, produce a similar substance; as the *Urceola Elastica* of Penang and Sumatra, the *Artocarpus Integrifolia*, and others not yet described. The Chinese have long been acquainted with this substance, and it is much used in Madagascar, especially for lights. The *Caúchúc* was first described by Condamine, in a *Mémoire* read before the *Académie des Sciences*, and afterwards published in his *Relation abrégée d'un Voyage fait dans l'Intérieur de l'Amérique Méridionale*, 1745: (78 :) he spells the name *Cahuchu*, and says that it was pronounced *Cahout-chou*.

In order to obtain the inspissated juice of the tree in the form in which it is imported to Europe, incisions are made in the bark, chiefly in wet weather. The flux from them is abundant, and of a milky white colour; and is conducted by tubes into vessels placed for its reception. It does not appear to be certainly known whether it hardens spontaneously, or in consequence of a secret process. It is formed into pear-shaped bottles by being spread over moulds of clay, and it receives its dusky exterior coating by exposure to smoke, in order that it may be thoroughly dried. It is then scratched on the outside with various figures, and the clay, after having been softened with water, is picked out.

The natives apply it to various uses; for water-proof boots, for bottles, for flambeaux, which give a very brilliant light, and burn for a great length of time; so much so, that a torch of an inch and a half in diameter, and two feet in length, is said to keep alight for twelve hours.

With us, besides the purposes above-mentioned, it is employed for flexible syringes, tubes, &c. and by means of turpentine or linseed oil to compose a varnish, which is used for air-balloons. It may be dissolved by ether; but the process is very expensive. Tubes are readily made from it, by splitting a piece of cane, and putting a slip of whalebone between the segments. If the Indian Rubber be cut into slips, twisted closely round the cane, and boiling water applied, the slips will become consolidated; it is then very easy to remove, first the whalebone, and afterwards the cane. Cloth of all kinds may be made waterproof by impregnation with the fresh juice of the *Caúchúc*; and such cloth, when made into articles of apparel, may be joined without sewing, (and

more durably and in better shape than by sewing,) if its edges be moistened with the same juice.

Humboldt, in his *Personal Researches*, states that the Image of Tlalocuecli, the principal God of the Toltecs, was placed on the top of a high mountain, having before it a vase, in which Caoutchouc and seeds were offered to him. (*Engl. trans.* i. 216.)

INDIANA, one of the United States of North America, is bounded on the South by the Ohio, between the Big Miami and the Wabash; on the West by the latter river and a meridian line, commencing about 40 miles above Vincennes and terminating in the parallel of the Southern shore of Lake Michigan; this parallel constitutes the Northern boundary of the State, and is limited towards the West by a meridian line, which, commencing at the mouth of the Big Miami river, separates Indiana from the State of Ohio. The length of Indiana from North to South is about 280 miles, and its breadth, which is tolerably uniform, about 155; the area is estimated at 39,000 square miles, or 24,960,000 acres.

Extent.

Throughout this extensive territory there are no mountains; a chain of low hills called the Knobs, rising to the height of 500 feet, diversify the country between the Ohio and the Wabash; towards the Western side of the State also, from the Miami to the Blue River, are several ranges of hills of inconsiderable elevation; the remainder of the territory is a level, in general thickly covered with lofty forests. Near all the rivers, except the Ohio, is found a tract of rich alluvial soil, unincumbered with timber, and rising into open prairies, or dry meadows, which are bounded by the woods. The herbage in these meadows is six or eight feet high in the summer time. In the Northern part of the State, near Lake Michigan, are several swamps, or small lakes, the sources of numerous streams. From the moderate elevation of this country, and the great number of rivers which flow through it, a great portion of the land is liable to periodical inundations, which are not, however, of a violent or impetuous nature, and merely fertilize the country without occasioning any damage. The chief river rising in this State is the Wabash, which winds through it from the North-Eastern to the South-Western frontier in a course of above 500 miles. The banks of this beautiful river are in general high and little exposed to inundation. The width at its mouth is about 300 yards, and its depth allows good-sized barges to navigate it for a distance of 250 miles; small boats and canoes ascend almost to its source. The frontier of this State, which is watered by the Ohio, is 471 miles in length; the numerous confluent and tributaries of these two great rivers are almost all navigable for some distance, so that the whole extent of the navigable waters of Indiana is said to amount to 2487 miles.

INDIANA. posed to be nearly a hundred in number; in the latest Maps not more than forty of them are laid down, varying from two to ten miles in length.

Climate. The climate of Indiana is in general healthy; the low alluvial tracts alone, which are exposed to inundations, being found productive of ague and febrile disorders. The winters are mild and short; the frosts in the severest years not lasting above three weeks. Tobacco thrives as well here as in Virginia; the vine is cultivated with success, and cotton also is produced in the Southern parts of the State. Peaches and common garden fruits grow in the most exposed situations. In general fertility and salubrity the central portion of this State, through which the tributaries of the Wabash fall into that river from the South and South-East, has the reputation of being the finest country in the Western World.

The chief mineral treasures of Indiana are the caves of native salts which occur near the banks of the Ohio; saltpetre, sulphates of soda and of potash are found in inexhaustible quantities; good coal has been found, it is said, near White River; iron ore is met with in the same situation, and silver ores have been found near Ouitania on the Northern bank of the Wabash.

Productions. The vegetation of Indiana resembles that of the back country in general; (see ILLINOIS;) but the mulberry is more abundant in the forests. The hills are covered with oak, elm, ash, hickory, walnut, sugar maple, &c.; the papau, honey-locust, spice-wood, &c. cover the swamps and low grounds; the ginseng grows to an uncommon size on the banks of the Whitewater River, and canes are abundant towards the junction of the Ohio and Wabash.

The soil is well adapted to maize, wheat, rye, and other grains; some tracts are favourable to the cultivation of rice. A colony of Swiss from the Pays de Vaud established itself in 1805 on the banks of the Ohio, on a tract to which it gave the name of New Switzerland, and where it successfully introduced the culture of the vine. The vines brought from Madeira are found to suit the climate best.

The woods are well stocked with deer and wild turkies. Bears and wolves are still common, but do not molest the settlers so much as the moles, mice, polecats, and squirrels.

Population. The greater part of this Country is still in a wild state; the Indian nations being indeed recognised as the lawful proprietors of the portions to which they have not sold their right. The increase of the colonists, however, is so rapid as to threaten, at no great distance of time, the extirpation of the native possessors. The population of Indiana, which amounted in 1800 to 4875, is supposed at present to exceed 150,000, so rapid has been the tide of immigration towards this fertile Country. "The settlers in this State" (says Mr. Birbeck) "are of a character very superior to that of the first settlers in Ohio, who were generally very indigent people; those who are now fixing themselves in Indiana bring with them habits of comfort and the means of procuring all the conveniences of life; I observe this in the construction of their cabins, their well-stocked gardens, and general neatness; the manners of the people are kind and gentle to each other and to strangers; the laws are respected and are effectual."

Towns The first European settlers in this Country were the French, who descended the Wabash from the Canadian lakes; their chief town was Vincennes, which still re-

tains, in the polite manners and personal neatness of its inhabitants, abundant proof of its Gallic origin. In 1805, some Swiss emigrants built the town of Vevay on the Ohio; subsequently, some Germans, under the guidance of one Rappe, an enthusiast, founded the thriving Town of Harmony. The peculiar tenets of the Harmonists, which discourage without actually forbidding marriage, have not prevented the increase of their settlement. Harmony is at present a populous manufacturing town, exporting fine merino cloths to the Eastern States. Corydon was originally the seat of Government, which has been since transferred to Indianapolis.

Brookeville, Princeton, Vevay, and many other towns, scattered over the prairies of Indiana, attest the rapid growth of the Western States, and surprise the traveller by the comfort and intelligence he finds among their inhabitants.

By an Act of Congress, of April, 1816, a Convention of Delegates was held in June of the same year, at Corydon, for the purpose of framing the Constitution of the State. By this proceeding, Indiana, which had previously been under a territorial government, became an integral member of the Union. The Constitution and laws framed on that occasion by the Delegates for the Government of Indiana, agree in their general character with those prevailing in the other States of the Union. The legislative authority resides in a Senate and House of Representatives, both elected by the people; the members of the latter annually, those of the Senate every three years. The Representatives, at first 25 in number, are to be increased as the population of the State augments, but never to exceed 100; the number of Senators is never to be less than one-third, nor more than one-half of the number of Representatives. The Governor holds his office for six years. Slavery or involuntary servitude cannot be introduced into the State, except for the punishment of crimes; and indentures of negro slaves executed in the neighbouring States are of no validity within the boundaries of this.

By the IXth Article of the Constitution, the General Assembly is authorized to grant lands for the support of seminaries and public schools; and so soon as circumstances permit, they are to provide for a general system of education, ascending in gradation from Township Schools to a State University, in which education shall be afforded gratis to all. In laying off a new County, the General Assembly is to reserve at least one-tenth of the proceeds of each town-land for the establishment of a Public Library therein. The Constitution may be revised, amended, or changed by a Convention, to be held every twelfth year for that purpose, if a majority of the qualified electors at the general election of a Governor vote in favour of the measure.

INDICTION.

There are some other combinations or systems of years, that are of use in chronology, as that called the *indiction*, which is a period of 15 years, at the end of which a certain tribute was paid by the provinces of the Roman Empire, and by which the emperors ordered public acts to be dated.

Priestley. *Lecture 14. On History*, part iii.

To the brief mention which we have already made of the *Cycle of INDICATION*, under *CHRONOLOGY*, the following particulars may be added.

Petavius.

The Jesuit Petau, or as he is better known by his Latinized name Petavius, devotes only a very few lines to the matter, the obscurity of which, as he confesses, baffles his research. *Indictionum originem vulgò Constantini ætate, produisse putant, ejusque anno vi, Christi cccxii. Sed ego, qui sic sentiunt, divinare eos arbitror, non certum dicere. Nam nullum idoneum testem citant. Apud Ambrosium fit ejus mentio verbis istis 'Indictio enim Septembri mense incipit' (Ep. ad Episc. Æmil.) et in Cod. Theod. 'Valentiaca Indictio' nominatur. (Leg. ix. cod. de Indul.) Antiquiorem his auctorem, qui quidem exploratæ sit fidei, non facile reperias. Unde porro Indictionis vox manaverit, quæque sit ei subjecta notio, non magis perspicuum est hactenus. Illud inter doctos convenit Indictiones nihil aliud esse quam præstationes et tributa, quorum canon, id est modus, quotannis indicebatur. Sed cur spatio xv annorum, quot orbis Indictionum colligit, finiri placuerit, et quâ de causâ, quove tempore, primum id usurpari cæperit, cum nullæ multorum conjecturæ sint, nulla satis probabilis adfertur.*

Spelman.

Spelman goes a little further by collecting some of these conjectures; and first for the etymology, of the source of which indeed there cannot be a doubt, though it is by no means easy to give it a meaning; *ab indico*; *ad Pontifices pertinet, juxta illud,*

Edicunt Reges, Indicit festa Sacerdos.

There is an old opinion, he continues, that the Roman Emperors imposed an annual tribute upon such of their subjects as were near the seat of Government—from those more remote, gold was demanded at the close of every five years: the tribute at the end of the second *lustrum* was to be made in silver, which was dedicated to the payment of the soldiery; at the third, brass and iron were required for their arms; hence the Indiction itself was called *ærea* or *ferrea*. Little, it should seem, is added to our knowledge of its nature or origin by these particulars.

Bede.

He then goes on to cite the various conjectures which we give below. Bede, he says, in his *Tract de Ratione Temporum*, (48.) has affirmed that the Emperors established Indictions as correctives in Chronology; lest confusion should arise from the practice of Historians in computing by reigns. Thus if an Emperor died in the middle of a year, that year might be attributed by one Historian to the deceased Prince, by another to his successor; and the error might be remedied by having a fixed cycle of recurrence.

Cedrenus.

Cedrenus in his *Annals*, under Theodosius, assigns the first computation by Indictions to the reign of that Emperor, and says that the point from which they were counted was the 15th year of Augustus Cæsar; from which assumption he deduces a very absurd etymology, *καλεῖται δὲ Ἰνδικτίων, τούτῃσιν Ἰνακτίων, ἡ περὶ τὸ Ἀκτίον νίκη.*

Onuphrius Panvinus.

Onuphrius Panvinus, *Fast. ii.*, dates the first Indiction from the victory of Constantine over Maxentius VIII. Cal. Octob.

VOL. XXIII.

Scaliger, in his *Treatise de Emend. Temp. v.*, has a long argument to show that Indictions depended upon the exhibition of Games at the expiration of five, ten, and twenty years. Thus he adds, very gravely, fifteen years elapsed from the celebration of Games in the fifth year of Constantine to that which took place in the twentieth of the same Emperor; and this interval was afterwards chosen for computation, because the Council of Nice broke up in the twentieth year, that is, fifteen years after the celebration of the Games which occurred in the fifth: and he concludes this solemn trifling with no small self-gratulation, *verissima hæc est Indictionum institutio, non eæ causæ quas alii adferunt.* His dates are, for the commencement of the reign of Constantine, A. D. 308; for the *Quinquennalia* 312; for the *Vicennalia* and dismission of the Council 328. We need not point to the great obscurity in which the matters connected with the 1st Council of Nice are involved. Scaliger, to the three commonly received Indictions, adds a fourth, that of Antioch, commencing in May.

INDICTION.

Scaliger.

Baronius (*Ann. 312. n. 104. &c.*) dates the first Indiction from A. D. 312, and he refers the cycle of fifteen years to the same number which under Constantine formed the period of military service. The veteran at their close might receive his dismissal, or if he continued in arms he obtained some extraordinary privileges. Baronius considers *Distributio* and *Fusio* to be synonymous with *Indictio*.

Baronius.

After this, Spelman proceeds to state, that whatever may be the origin of the term, (and from the above conjectures the reader will probably coincide in the opinion which we have cited from Petavius, that nothing satisfactory is known about it,) nevertheless all authorities concur in fixing the starting point at A. D. 312 or 313. He himself decides for the first. The Imperial or Cæsarean Indiction was reckoned from the 24th of September, because the first month, according to that calculation, began with the new moon after the Autumnal Equinox. The Romanists, on the other hand, dated their Pontifical Indiction from the Calends of January, which commenced their year, when they ceased to count from the 25th of December.

Point of commencement.

To find the Roman Indiction add 3 to the year of our Lord, (because our Saviour is supposed to have been born in the fourth year of Indiction,) divide the whole by 15, and the remainder will be the year required; if there be no remainder, it is the last year of the Cycle. Thus the year 1829 is the second of Indiction.

To find the Roman Indiction.

1829

15) 1832 (122—2 remainder.

The same rule applies to the Greek Indiction, except that 4 must be added instead of 3. The following memorial lines embody the above process:—

The Greek.

*Si per quindenos Domini diviseris annos,
His tribus adjunctis Indictio certa patebit.
Si nihil excedit quindena Indictio currit.*

Du Cange gives many of the above particulars, and adds, that the Greek Indiction prevailed in France, England, and Germany; that the Roman Indiction is not used in the *Letters* of Gregory the Great, of John VIII., nor of Gregory VII.; but that, on the contrary, the Greek date from September is observable in Acts of the Vatican as late as A. D. 1158; yet in that same year Baronius cites an Act of Alexander III. plainly referring the Indiction to the 1st of January; from

which variation we may believe that the usage at that time was by no means fixed.

A careful observation of the differences of the three Indictions is very necessary in the perusal of History for the correct adjustment of Chronology. Thus it is evident that as the Constantinopolitan Indiction begins on the 1st of September, 312, the Imperial on the 24th of September of the same year, and the Pontifical on the 1st of January, 313, an event occurring on the 5th September, 313, would fall in the second year of the Constantinopolitan Indiction, and in the first of the Imperial and Pontifical; another happening on the 25th September, 313, would be included in the second of the Constantinopolitan and Imperial, and the first of the Pontifical; and again, a third on the 10th of January, 314, would fall in the second year of all three Indictions.

The learned Benedictine who wrote the Preliminary Dissertation to *L'Art de vérifier les Dates*, mentions an Indiction commencing in October, and used in the Register of the Parliament of Paris, another employed by Gregory VII. from the 25th of March, and a third by Innocent II. from Easter. We need not observe how much the obscurity, of which Petau complained, is increased by enlarging the number of these Cycles.

AN INDICTMENT, in Law, which has been often very lengthily and confusedly described, is defined by Blackstone in a few plain and simple words to be "a written accusation of one or more persons, of a crime or a misdemeanour, preferred to, and presented on oath by a Grand Jury."

Indictments are preferred to a Grand Jury in the name of the King, but at the suit of any private prosecutor. The Grand Jury hears evidence on the part of the prosecution only, for its duty is not more than to inquire whether there is sufficient cause to call upon the party accused to answer the Indictment at a subsequent Trial. We have already shown the process if the Bill is rejected under an *IGNORAMUS*. If, on the other hand, twelve at least of the number (which may not exceed 23, nor be less than 12) are satisfied of the truth of the accusation, they write upon it *a true Bill*, and the Indictment is said to be found, and it is publicly delivered into Court.

As an Indictment is the King's suit, the prosecutor may be a witness, but he cannot receive damages for his grievance, unless by some particular Statute, nor may he address the Jury in his own person.

The Grand Jury being sworn only for one particular County, cannot, unless enabled by Statute, inquire concerning an offence committed without that County. Thus at Common Law, if a man was wounded in one County and died in another, since no complete act of Felony was committed in either, so he was not indictable in either. This absurdity was corrected by 2 and 3 Edward VI. c. 24, which fixes the Indictment in the County wherein the party dies; and by 2 George II. c. 21., repealed but re-enacted by 9 George IV. c. 31., if the death take place at sea, or elsewhere out of England, the Indictment lies in the County wherein the cause occasioning death was applied. There are a few special exceptions, but in general the Indictment must be laid in that County wherein the fact was perpetrated. If no town or place be named, the Indictment is void; but a mistake in the name is not of any consequence, provided the fact be proved at some other place in the same County.

The great object to which Indictments are addressed is the attainment of precision and certainty; thus the *person* of the offender must be ascertained by setting forth his christian and surname, degree, mystery, and residence. The *time* and *place* of offence must also be ascertained, by naming the day and the township in which the fact was committed. By a strange contradiction, however, a mistake on these points is in general not held to be material, provided the *time* be laid previous to the finding of the Indictment, and the *place* be within the jurisdiction of the Court; unless where the place is laid not merely as a *venue*, but as a part of the description of the fact. The time necessarily becomes of great importance, when there is any statutable limitation of the period within which an offence may be prosecuted; and so also in a case of murder, wherein the death must take place within a year and day after the time assigned for its cause.

There are also particular technical words necessary for the description of an offence; and for these synonymous terms are not to be substituted. In Indictments for Treason the offence must be laid as done "treasonably and against his allegiance." In Murder that word must be employed; so too in all Felonies and Burglaries, *feloniously* and *burglariously* are held to be the only words by which the crime is accurately defined. In order to show that the wound is mortal, its length and breadth must be expressed in Indictments for murder; and as the instrument wherewith it is committed is forfeited as a deodand to the King, its value must be stated; so too in Larcenies, the value of the thing stolen must be stated; and this custom still continues, though the reason for it has ceased to exist by Mr. Peel's late Acts. Of old, if the thing stolen was worth more than 12*d.* the offence was *Grand Larceny*; if less, *Petit*. The distinction is now abolished.

An Indictment drawn upon a private Act ought to pursue the words of that Act. Upon a public Act the recital is unnecessary, because the Judges are officially bound to take notice of all such Acts; and it is unwise, because a misrecital is fatal, if a word of substance be omitted. The most usual way of concluding, therefore, is by a summary statement, "against the form of the statute." False Latin anciently did not hurt an Indictment, if by any intendment it could be made good; and the necessity of this extensive license must be evident to any one conversant with the barbarous jargon of Courts and Records. If any word, however, was not Latin, (*i. e.* *Law Latin*), or allowed by Law as a term of Art, or if it had been insensible to a material point, the Indictment was insufficient. An exception also was made in favour of puny Latinists, whereat Priscillian would have been sorely heart-stricken; an Indictment, it seems, was not set aside for a false concord, as the expressions were considered to be significant enough to make the sense appear.

All Felonies and capital crimes soever, and all inferior crimes of a *public* nature, (or such as by a legal fiction may be so considered,) are Indictable; but no injuries of a private nature are so, unless they in some way concern the King.

INDIGO-
FERA.
INDIGO.

INDIGOFERA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx spreading; corolla pea-flowered; the keel with a subulate spur on both sides; pod linear, small, round, or quadrangular.

The species of this genus are very numerous; more than seventy have been described, natives of hot climates. Many of the species produce the valuable colouring matter called Indigo. *I. tinctoria* and *Anil* are the species usually cultivated in the East Indies and Mexico.

INDIGO is described by Beckmann (iv. 101.) to be not only the substance made from the plants referred by Botanists to the *Indigofera tinctoria*, but "every kind of blue pigment separated from plants by fermentation, and converted into a friable substance by desiccation." He thinks it probable that Indigo was brought into Europe and employed in dyeing and painting as early as the time of Dioscorides and Pliny. The accounts given by each of these writers severally of *Ἰνδικόν* (Diosc. v. 107.) and *Indicum*, (Plin. xxxv. 27. *Ed. Hard.*) are very similar, and that of Isidorus (*Orig.* xix. 7.) is probably copied from the latter. We subjoin Pliny's statement in Holiand's words:—"After this rich and lively rosat or purple-red, Indigo is a colour most esteemed; out of India it commeth; whereupon it tooke the name. And it is nothing els but a slimie mud cleaving to the foame that gathereth about canes and reeds: whiles it is punned or ground it looketh blacke; but being dissolved, it yeeldeth a woonderfull lovely mixture of purple and azur. There is a second sort of it found swimming upon the coppers or vats in purple-diers' work-houses; and in truth nothing els but the verie fume or scum that the purple casteth up as it boileth, in manner of a florey. Some there be that doe counterfeit and sophisticate Indico, selling instead thereof pigeons' dung, Selinusian earth, or Tripoli, died and deeply coloured with the true Indico; but the prooffe thereof is by fire; for cast the right Indico upon live coles, it yeeldeth a flame of most excellent purple, and while it smoketh, the fume senteth of the sea; which is the reason that some doe imagine it is gathered out of the rocks standing in the sea. Indico is valued at twenty *denarii** the pound. In Physicke there is use of this Indico; for it doth assuage swellings that doe stretch the skin; it represseth violent rheums and inflammations, and drieth ulcers." (xxxv. 6.) In another place he rates it at a little lower value. "It is not long since another azur or blew, named Indico, began to be brought over unto us out of India, which is prized at seventeen deniers the pound. It serveth painters well for the lines called *Incisuræ*, that is to say, for to devide shadows from lights in their works." (xxxiii. *ult.*) With this Indigo, as above described, the moderns are unacquainted.

To return to Beckmann. He considers, and we believe justly, the *Ἰνδικόν* of Arrian and of Hippocrates to have been a very different substance from Indigo; for *Indicus* with the Ancients, as *Indian* with ourselves, was a general appellation for numerous Oriental commodities. The *Indieum* of Pliny was so dear, that painters were furnished with it, not from their own funds, but by their Patrons; and they frequently employed cheaper

materials as substitutes. Modern landscape-painters still use it to produce a pale gray; but it will not harmonize with oil; and Prussian blue, smalt, &c. are the pigments employed since the discovery of that mode of painting.

Beckmann continues to trace the knowledge of Indigo through the Arabian Physicians; but their accounts are confused, and we depend for them upon very incorrect Latin translations. In a Latin Treaty between Bologna and Ferrara in A. D. 1193, *Indigum* is reckoned among customable articles. (Muratori, *Ant.* ii. 894.) Marco Polo, who travelled through Asia in the XIIIth century, describes the process of making *Endicum*, which he saw in the Kingdom of Coulan, or Coilum; and he adds that, after having been dried in the sun, it was cut into small cakes, *quales ad nos inferri solet.* (iii. 31.) Francesco Balducci Pegolotti, in the following century, mentions various kinds of *Indaco*; and Nicolo Conti, a traveller in India about the middle of the XVth century, speaks of *Endego* among the merchandize of Camboia. The price current of good Indigo at Calcut is stated by Barbosa, a Portuguese, in 1516; but its general European introduction does not appear to have taken place till the establishment of the Trading Company in the Netherlands, in 1602. So great was its consumption within thirty years from that time, that in 1631 seven vessels brought from the East Indies to Holland 335,545 lbs. of Indigo, which, at a low valuation, are estimated at 500,000 dollars. A similar, or perhaps the same plant as that producing the Oriental Indigo, was found in America, and soon became an article of commerce. It was first brought from Guatemala, and for a long time was furnished by no other Island except St. Domingo. The sale of woad became so much injured by the new plant, that a prohibition was issued against it in Saxony in 1650; and it appears to have been included among certain "pernicious, deceitful, eating, and corrosive" substances, which constituted what was bitterly named "the Devil's dye." Other prohibitions followed; and the Nuremburghers established a law by which Dyers were obliged annually to take an oath not to use Indigo; a law which was suffered to exist even when Beckmann wrote, sorely to the spiritual peril of the cultivators of the dyeing craft, who thus openly and notoriously perjured themselves once at least every current year. Indigo was forbidden in Languedoc in 1598; but, in less than a century afterward, Colbert partially removed this enactment; and in 1737 the French Dyers were left to their free choice.

The Spaniards call Indigo *anil*, or *aniz*, a word corrupted from the Arabian *niz* or *nil*. (Humboldt, *Re-searches*, book iv. ch. x.) By the Chinese it is known as *Tien laam*, i. e. sky-blue. The Mexicans gave the names *monuitli* or *tleuohuilli* to the dried cakes, and one yet more unpronounceable, *Xiuhquilipitzahuac* to the plant itself. (Humb. *ut sup.*) Hernandez recommended its introduction into the South of Spain; and it was common in Malta till the close of the XVIIth century. (*Ibid.*)

The English Sugar-Colonies during their infancy cultivated Indigo largely; but an impolitic home-taxation, and the superior demand for sugar, checked and at length destroyed the trade; so that till the middle of the last century the French Islands (with the exception of East Indian and Spanish-American importations) supplied the greatest part of Europe, and the annual

balance paid by the British Empire to France for Indigo has been estimated at £200,000. In 1747, a great exertion in this branch of commerce was made in Carolina, wherein the Indigo plant had been found a few years before, growing spontaneously in great abundance. 200,000lbs. weight were shipped for England; and though it was not quite so well cured as that from the French Islands, it found a good market; and by 21 Geo. II. c. 30. its cultivation was encouraged by a bounty of 6d. per pound on all Indigo raised in any of the British Colonies and imported into Great Britain directly from the place of growth. (Mac Pherson, *Ann. of Com.* iii. 259.) In 1763, the bounty was reduced to 4d. The following account of the quantities of Indigo imported into Great Britain in each of the respective years named below was presented to the House of Commons in 1799.

Years.	lbs.	Years.	lbs.	Years.	lbs.
1788.	1,320,396	1792..	707,210	1796..	2,831,195
1789.	1,588,711	1793..	968,095	1797..	2,609,453

1791..	978,907	1795..	1,441,905		

A full account of the method of cultivating the plant and procuring the Indigo from it may be found in the *Nouveau Voyage aux Isles de l'Amérique* of Labat. The plant is infused in water in huge vats of masonry, and the liquor, being tapped after a sufficient degree of fermentation, is admitted into other vats, wherein it is beaten and agitated, for a considerable length of time, with buckets fixed to long poles, till the colouring matter is united in a body. After its precipitation the water is let off, and the blue matter having been yet further drained, is exposed in shallow wooden boxes to the air, but not to the sun, till it becomes thoroughly dry. Before it is completely dried, it is cut into small pieces of about an inch square, and as it loses much weight during the first month, its sale is diligently hastened. It is packed either in barrels or in sacks of coarse linen, sewed with the greatest nicety into an ox-hide. These packets are called *serons*, and two of them make the load of a beast.

Good Indigo is moderately light, when broken exhibits a shining surface, burns almost entirely away upon a red-hot iron, and when placed in water becomes diffused through it and subsides very slowly: to make it wholly soluble in water, at least an equal quantity of fixed alkaline salt must be added. Every kind of cloth may be dyed with Indigo without the assistance of any mordant; and the colour produced is distinguished for its permanency.

Without distinction or discrimination, examination or circumspection; and, thus, heedless, improvident, or imprudent, incautions, inconsiderate, unadvised, rash.

Many women that love *indiscreetly* break concord at once: therefore must their *discretion* be holpen forth with some teaching, and their fierceness abated.
Vives Instruction of a Christian Woman, book ii. ch. v.

What if my youth hath offer'd up to lust
Licentious fruits of *indiscreet* desires,
When idle heat of vainer years did thrust
That fury on.

Daniel. History of Civil Wars, book ii.

So *indiscreetly* sort not thy election,
To shut that in a melancholy cell,
Which in a Court ordained was to dwell.

Drayton. The Legend of Matilda the Fair.

Your virtues, by your follies made your crimes,
Have issue with your *indiscretion* join'd.

Daniel. Musophilus.

I always lay it down as a rule, that an *indiscreet* man is more hurtful than an ill-natured one; for as the former will only attack his enemies, and those he wishes ill to, the other injures indifferently both friends and foes.
Spectator, No. 23. col. 3.

There are others, who, out of an *indiscrete* devotion, are so solicitous to increase the number and the wonderfulness of mysteries, that, to hear them propose and discourse of things, one would judge, that they think it is the office of faith, not to elevate, but to trample upon reason.

Boyle. Works, vol. iv. p. 158. *Considerations about the Reconcilableness of Reason and Religion*.

To speak *indiscreetly* what we are obliged to hear, by being hasped up with thee in this publick vehicle, is in some degree assaulting us on the high road.
Spectator, No. 132. col. 3.

Much of this I take to proceed from the *indiscretion* of the books themselves, whose very titles of Weekly Preparations, and such limited godliness, lead people of ordinary capacities into great errors, and raise in them a mechanical religion, intirely distinct from morality.
Id. No. 79. col. 3.

Yet some there are who *indiscreetly* stray,
Where purblind practice only points the way,
Who ev'ry theoretic truth disdain,
And blunder on, mechanically vain.

Mason. Fresnoy. Art of Painting.

Christianity was too frequently seen in the false light, in which these rash adventurers had placed it: and men of shallow minds, and libertine principles, were ready enough to take advantage of all their *indiscretions*.

Undistinguishing, without distinction, discernment, or difference; undiscerning; without particularity.

Could ever wise man wish, in good estate,
The use of all things *indiscriminate*?

Hall. Satire 3. book v.

If error or interest had not unravelled the secret, and looked too far into the sanctuary, where they could see nothing but a cloud of fire, majesty, and secrecy *indiscriminately* mixt together, we had kneeled before the same altars, and adored the same mystery.
Taylor. Polemical Discourses, fol. 182.

The papists had two maxims, from which they never departed: the one was to divide us; and the other was to keep themselves united, and either to set on an *indiscriminated* toleration, or a general prosecution; for so we love to soften the harsh word of persecution.
Burnet. Own Times, vol. i. p. 250. *Charles II. Anno 1663*.

God Almighty never meant to deliver such a gospel to mankind, as that all *indiscriminately*, both good and bad, should be equally capable of perceiving the evidence of it.

Sharpe. Works, vol. vi. p. 350. *Sermon 18*.

The learning of a pleader is usually upon a level with his integrity. The *indiscriminate* defence of right and wrong contracts the understanding, while it corrupts the heart.

Junius. Letter 68. To Lord Mansfield, Jan. 21, 1772.

Since, then, in our own order of being, the power of the individual over external bodies is not at all proportioned to his piety or his morals, but is exercised *indiscriminately*, and in equal degrees by the good and by the bad, we have no reason from analogy to suppose but that the like *indiscrimination* may obtain in higher orders, and

That cannot be set aside or apart; *sc.* as unnecessary, or not wanted, or not required; that cannot be done without, cannot be spared, exempted, or excused.

Pope Belhoûde was the fyrst after Sathās comming fourth, y^e fashioned out his prestes & hys mōkes by thē, & that made thē *indispesable*, unlesse it wer for great sūmes of mony, as y^e chronicles of all y^e christen naciōs declareth.

Bale. *Apology*, p. 133.

If the priest pardons no sins but those which are enumerated, the penitent will be in an evil condition in most cases: but if he can and does pardon those which are forgotten, then the special enumeration is not *indispensably* necessary.

Taylor. *Polemical Discourses*, fol. 481. *Dissuasive from Popery*, book i. part ii. sec. 9.

Those few [learned men] that were about the pope, thought the prohibition of such marriages was only positive, and might be dispensed with by the pope: whereas all other learned men thought the law was moral and *indispensable*.

Burnet. *History of the Reformation, Anno 1532.*

Man being thus bound by the peremptory, irreversible decree of heaven, must by virtue thereof, *indispensably* obey or suffer.

South. *Sermons*, vol. iv. p. 228.

The author begs leave to assure those who have no time to spare from their attention on the public, that the protection of religion is *indispensably* necessary to all governments; and for his warrant he offers them the following volume.

Warburton. *Works*, vol. i. p. 192. *The Divine Legation. Preface.*

Contrary to all their notions about the eternity and *indispensability* of the natural law.

Skelton. *Deism Revealed*, dial. iii.

INDISPERSED, *in*, privative, and *disperse*, *q. v.* from *dispersum*, past participle of *dispergere*, to scatter.

Not scattered, spread, or dissipated.

So perfect clear,
So perfect pure it is, that outward eye
Cannot behold this inward subtile starre,
But *indisperst* is this bright majesty,
Yet every where out shining in infinite.

To displace, to disarrange, to disorder; to unfit or unsuit: to be, or cause to be, unfavourable or averse, to disincline.

By our laws, as that Modus lays them down, the king neither can, nor ought to absent himself from his parliament, unless he be really *indisposed* in health; nor then neither, till twelve of the peers have been with him to inspect his body, and give the parliament an account of his *indisposition*.

Milton. *Works*, vol. i. fol. 525. *A Defence of the People of England.*

The apostle of the Gentiles charges us, to pray continually. Not that we should in the midst of a sensible *indisposedness* of heart fall suddainly into a fashionable devotion; but that by holy ejaculations,

and previous meditation, we should make way for a feeling invocation of our God, whose ears are never but open to our faithfull prayers.
Hall. *Works*, vol. iii. fol. 460. *The Extremes of Devotion.*

All which I will bid you remember, is, that the Pythagorean doctrine doth not only carry one soul from man to man, nor man to beast, but indifferently to plants also: and therefore you must not grudge to find the same soul in an Emperor, in a post horse, and in a Maceron; since no unreadiness in the soul, but an *indisposition* in the organs, works this.

Donne. *Progress of the Soul. Epistle.*

Being now at Sir William Bowyer's in the country, I cannot write at large, because I find myself somewhat *indisposed* with a cold, and am thick of hearing, worse than I was in town.

Dryden. *Prose Works*, vol. i. part ii. p. 54. *Letter* 21. *September* 3, 1697.

But the conversation I had with this pious author during my stay at Geneva, and the present he was pleased to make me of this treatise before it was printed, in a place where I had opportunities to enquire both after the writer, and some passages of the book, did at length overcome in me (as to this narrative) all my settled *indisposedness* to believe strange things.

Boyle. *Works*, vol. i. p. 222. *Prefaces, &c. of Mr. Boyle. To Dr. Peter du Moulin.*

And this is not from any failure, or defect in the illumination itself, but from the *indisposition* of the object, which being thus blacken'd, can neither let in, nor transmit the beams that are cast upon it.

South. *Sermons*, vol. iii. p. 58.

In this view of things, the proposing of these mysteries under the impenetrable cover of parables was the greatest of all mercies to them, since a further degree of light would not only have *indisposed* them to the reception of it, but must have aggravated their guilt beyond measure, and have left them totally without excuse.

Hurd. *Works*, vol. vii. p. 157. *Sermon* 38.

The circumstance which, from time to time, occasioned a defection from the law, was neither an *indisposition* to its establishment; nor any incoherence in its general frame and constitution; nor aversion to any particular part, nor yet a debility or weakness in its sanctions.
Warburton. *Works*, vol. v. p. 71. *The Divine Legation*, book v. sec. 2.

That cannot be debated, contended, or contested, opposed, or controverted; incontestable, incontrovertible.

For it shall be sufficient for him to have equity on his part, or the bare words of the law, or a writen and wrested understanding of the same, or else (which with good and just judges is of greater force than all laws be) the king's *indisputable* prerogative.

Sir Thomas More. *Utopia*, vol. i. p. 114. *Introductory Discourse to the Description of Utopia*, book i.

The picture concerning the death of Cleopatra with two asps or venomous serpents unto her arms, or breasts, or both, requires consideration: for therein (beside that this variety is not excusable) the thing it selfe is questionable; nor is it *indisputably* certain what manner of death she died.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. xii.

This moral principle of doing as you would be done by, is certainly the most *indisputed* and universally allowed of any other in the world, how ill soever it may be practised by particular men.

Sir Wm. Temple. *Works*, vol. iii. p. 44. *Of Popular Discontents.*

Udall. *Matthew*, ch. xix.

But if princes be coupled in the chaines of *indissoluble* amitie, and will mutually & faithfully defende their comen enemies, and aduoyde their manifest injuries, there is no power or strength of the comen people, that either can hurt or cast them from the throne.

Hall. *Henry IV. The eighth Yere*.

To enjoin the *indissoluble* keeping of a marriage found unfit against the good of man both soul and body, as hath been evidenc'd, is to make an idol of marriage, to advance it above the worship of God and the good of man.

Milton. *Works*, vol. i. fol. 182. *The Doctrine and Discipline of Divorce*.

Of these perfections some were accidental or adventitious to the human nature by the benignity of Almighty God, and concredited thereunto upon condition of his obedience to the command of God; and upon the breach of that condition were either utterly lost, as the *indissolubility* of the union of the composition.

Hale. *Origin of Mankind*, ch. iii. sec. 4.

Adam the first created man, though consisting of a composition intrinsically *dissolvable*, had he continued in innocence; should or might haue held by the continued influx of the Divine will and power a state of immortality and *indissolubleness* of his composition.

Boyle. *Works*, vol. iii. p. 94. *Considerations and Experiments touching the Origin of Qualities and Forms*.

The union between these two natures is only by intimate *indissoluble* relation one to the other.

South. *Sermons*, vol. vii. p. 21.

He [Crousaz] was persuaded, that the positions of Pope, as they terminated for the most part in natural religion, were intended to draw mankind away from Revelation, and to represent the whole course of things as a necessary concatenation of *indissoluble* fatality.

Johnson. *Life of Pope*.

But as to the contract itself, this not receiving its essential quality of *indissolubility* till made on the terms which civil laws prescribe, it was null and void from the beginning.

Warburton. *Works*, vol. ix. *Sermon* 17.

What then, it may be asked, are the distinct parts which God and the magistrate claim as their peculiar, in this solemn contract? It is from God that two are made one by an *indissoluble* tie: and this is the law of religion.

Clarke. *Works*, vol. ii. p. 753. *The Answer to the Sixth Letter concerning the Being and Attributes of God*.

Though the want of *individuality* or distinctness is, indeed, the sole reason urged in the present argument, why a system of matter cannot have a power of thinking or an *individual* consciousness; yet it ought not therefore to be said, that it is only required that a thing be an *individual* being, in order to its being a proper subject of a power of thinking.

Id. Ib. vol. iii. fol. 761. *A Defence of the Immateriality and Natural Immortality of the Soul*.

Other beings there may be innumerable, besides the one Infinite Self-Existent; but no other being can be self-existent, because so it would be *individually* the same, at the same time that it is supposed to be different.

So that it is not with evidences of fact as it is with logical or mathematical demonstrations, which seem to consist in *indivisibles*, for that which thus is demonstratively true is impossible to be false; but moral evidence is gradual, according to the variety of circumstances.

Hale. *Origin of Mankind*, ch. i. sec. 2.

When I speak of *indivisibility*, that imagination create not new troubles to herself, I mean not such an *indivisibility* as is fancied in a mathematical point; but as we conceive in a sphere of light made from one lucid point or radiant center. For that sphere or orbe of light, though it be in some sense extended, yet it is truly *indivisible*, supposing the center such. For there is no means imaginable to discern or separate any one ray of this orbe, and keep it apart by it self, disjoyned from the center.

Henry More. *An Antidote against Atheism*. Appendix, ch. x. fol. 173.

INDRE, a Department of central France, comprising the Southern portion of the ancient Province of Berri. It is encircled by the Departments of Loire and Cher, Creuse, Upper Vienne, Vienne, and Indre and Loire. The superficial extent is 701,661 hectares, or about 2860 square miles, with a population, in 1827, of 237,628.

The rivers Indre and Creuse with a great number

of tributary streams water this Department, which is tolerably fertile, and produces more corn than it consumes. It is, nevertheless, considered backward in agricultural improvements: barren heaths and marshes occupy a great share of the Department, and numerous extensive woods afford a shelter to wolves. The imperfect cultivation of this country, however, is as much to be ascribed to the parsimony of nature as to the inertness of the inhabitants; the heights are formed of barren gravel piled on the stiff tenacious clay which predominates in the low grounds. There are but few vineyards in the Department, but the successful culture of hemp in some measure compensates their absence. The iron mines are numerous, and afford the best iron in France; the other manufactures are paper, leather, and woollen cloths. The Department is divided into the Arrondissements of Châteauroux, Issoudun, Le Blanc, and La Châtre.

Châteauroux, the chief place in the Department, is situated on the Indre in a fine plain. The woollen factories round this place are said to employ 10,000 men; iron works of great extent, also, exist in its neighbourhood. The great road to Limoges passes through this town, which is 158 miles South-West of Paris. Population 8,500.

INDRE and LOIRE, (the Department of the,) situated to the North-West of the Department of the Indre, embraces nearly the whole of the Touraine. With an area of 612,679 hectares it has a population of 290,160. This country has been long designated the garden of France, rather, perhaps, from the mildness of its climate and the general amenity of its appearance, than on account of its wealth or luxuriant cultivation. The surface is diversified with hills of moderate elevation, clothed with vineyards or orchards of fruit trees, and the Loire, in some places, contributes to make what may even be called a beautiful landscape.

This is the part of France in which the rearing of the silk-worm was first attended to as an object of national industry, and in which the first extensive plantations of the mulberry were formed. Silk still continues to be the principal manufacture and article of export; but as the rivalry of Lyons, independent of the reverses which the national commerce and industry have had to support, has diminished the local importance of this branch of business, it is no wonder that the Touraine, with all its natural advantages, should exhibit symptoms of distress. The statistical researches of MM. C. Dupin and Dureau de la Malle assign but a low place to this Department in the scale of industry and mental improvement. According to the map constructed by M. Dupin to illustrate the moral condition of France, (see *Forces Productives de la France*, 1827, par M. C. Dupin,) the number of male children instructed in schools in this Department is to the whole population as 1 to 225, while in other Departments the proportion is as 1 to 10. Some writers of the Touraine, however, question the accuracy of this statement, or suppose a great improvement to have taken place since the year 1822, when the details were collected on which it rests; and aver that the proportion of males at school to the whole population is as 1 to 33 throughout the Department, and in some places, as Tours for example, as 1 to 9. Wine, hemp, and silk are the principal exports. Preserved prunes, for which Tours is famous, bring in a revenue of 250,000 francs. Licorice, anise, coriander, and the Italian poplar, which attains

a great size on the banks of the Loire, may be also enumerated among the important articles of produce. The poor receiving relief from public institutions are a thirty-seventh part of the population. The Department is divided into three Arrondissements, Tours, Loches, and Chinon.

Tours, situated between the Loire and Cher, a little above their confluence, is a conspicuous object in one of the finest plains in France. The houses are in general low, and numerous gardens are interspersed among them; owing to these circumstances, the town occupies a more extensive site than seems proportioned to its population, which does not exceed 22,000 souls. The avenues to the town are planted to a great distance; the main street, called the *Rue Royal*, or *Rue Neuve*, built by aid from Government in the reign of Louis XVI. after part of the town had been destroyed by fire, is constructed with a uniformity of design which is rarely seen in continental towns: the houses are of great height, and faced with a white stone, and this street conducts to the bridges, viz. that over the Cher on the South side, and the bridge over the Loire on the North: the latter is considered to be one of the finest structures of the kind in Europe, being composed of fifteen elliptical arches, having a span of 75 feet each, and measuring in its whole length 1400 feet. The *Mail* is a continuation of the *Rue Neuve*, and is esteemed the finest promenade in France.

Tours has been always a distinguished archiepiscopal seat. The revenues of the Archbishop, before the Revolution, amounted to 60,000 livres. The Cathedral is a vast Gothic pile, remarkable for the rich workmanship of its portal, and for its light and lofty towers. Some valuable manuscripts are preserved in the Canons' library. St. Gatien, to whom the Cathedral is dedicated, was the first Bishop of Tours, and died at the end of the III^d century. The Church of St. Martin is one of the largest in Europe, but of heavy architecture. Its Chapter, previous to the Revolution, was the most numerous as well as the noblest in France; the King was the Abbot, and the chief of the French Nobility were reckoned among the Canons. Tours has been distinguished in History from a very early period; it was here that the Saracens were defeated by Charles Martel, in 732. The Parliament of Paris, and the chief Courts were transferred to Tours, during the wars of the League, and the States of the Kingdom were on several occasions assembled in the same city. 145 miles South-South-West of Paris.

Reid. Inquiry into the Human Mind, ch. vi. sec. 24.

After *Institution* to a Benefice, the Ordinary issues a mandate for *INDUCTION*, directed to the person who has power to Induct. This by common right is the Archdeacon, but others may also perform it, by composition or prescription. Thus the Dean and Chapter of St. Paul's, and the same Body at Litchfield, Induct by prescription; so also does the Chancellor or Commissary, if a Church be exempt from Archdiaconal jurisdiction: or if it be a Peculiar, the Dean or Judge within such a Peculiar: and when an Archbishop collates by lapse, the mandate goes not to the Officer of the Archbishop, but of the Bishop. If a Bishop dies or is removed, after Institution given, and while a mandate of Induction is either not issued or not executed, the Clerk may repair to the Archbishop for such mandate. The person to whom the mandate is directed, may direct a precept to some other Clerk. The Induction consists in vesting the Incumbent with full possession of all the profits belonging to the Church; and is usually performed in the following manner. The Inductor takes the Clerk by the hand, and lays it upon the Key or the Ring of the Church door, or if neither of these are to be had, or the Church is in ruins, then on any part of the wall of the Church or Church-yard; or even presents him with a clod or turf of the glebe, and saith to this effect, "By virtue of this mandate I do Induct you into the real, actual, and corporal possessions of the Church of C. with all the rights, profits, and appurtenances thereto belonging." After which the Inductor opens the door, and puts the person Inducted into the Church; who usually tolls a Bell, to make his Induction public and known to the Parishioners. Which being done, the Inductor endorses a certificate of Induction on the Archdeacon's mandate, and they who are present testify the same under their hands.

Donatives are given and fully possessed by the single donation of the Patron in writing, without Presentation, Institution, or Induction. So, also, if the King grants one of his Free Chapels, the grantee shall be put in possession by the Sheriff of the County, not by the Ordinary of the place. A Prebendary of Westminster enters also without Induction, upon the King making collation by his Letters Patent. The Fees are now generally regulated according to the custom of the place. The Clerk is not complete Incumbent till after Induction, whereby he becomes seized of the temporalities of the Church, so that he hath power to grant them or sue for them, he is entitled to plead that he is *parson imparsonée*, and the Church is full not only against a common person, (for so it is by Institution,) but also against the King, on which account it is compared in the Books of Common Law to Livery and Seisin. And what Induction works in Parochial Cures is effected by Instalment into dignities, Prebends, and the like in Cathedral and Collegiate Churches. Being an Act of a Temporal nature, it is cognisable in the Temporal Courts, and the Inductor, if he refuse or delay, is liable to an action at Law as well as to spiritual censures.

Every Incumbent of a Benefice with Cure, within two months after Induction, (computing twenty-eight days to each month,) must read the Common Prayer, morning and evening, openly and publicly, upon some Lord's day, within the Church to which he is Inducted, and declare his assent thereto in a prescribed form of words. If he neglects this without some lawful impediment allowed by his Ordinary, (and in case of such impediment within one month after it be removed,) he shall be immediately deprived of the Benefice. (13, 14 Charles II. c. 4.) He is also to read and declare his assent to the XXXIX Articles within like time and under like penalties. (13 Elizabeth, c. 12.) The Ordinary must give six months' notice of such deprivation, to the Patron, before any title can accrue through lapse. The Incumbent must also publicly read the Ordinary's certificate, that he has subscribed the declaration of conformity to the Liturgy. This must be done, under penalty of deprivation, within three months after subscription, upon a Lord's day, in his Parish Church, in the presence of the Congregation, during the time of Divine Service. It is considered a necessary precaution that a Clergyman should keep a written memorandum that he has complied with these forms, signed by some trusty persons present at their fulfilment. A convenient form for such Memorandum may be found in Burn's *Eccl. Law, ad v. Benefice, ad fin.* Lastly, within six months from Induction he must take the oaths of supremacy, allegiance, and abjuration, in one of the Courts at Westminster, or at the General Quarter Sessions of the Peace, on pain of being incapacitated to hold the Benefice, of being disabled to sue in any action, to be guardian, executor, or administrator, to be capable of any legacy or deed of gift, to bear any office or vote at any election of Member of Parliament, and of forfeiting £500. 1 George II. c. 13; 9 George II. c. 26.

INDULGENCE, according to the doctrine of the Romish Church, is "a releasing, by the power of the keys committed to the Church, the debt of temporal punishment which may remain due upon account of our sins, after the sins themselves, as to the guilt and eternal punishment, have been already remitted by repentance and confession." (*Grounds of Catholick Doctrine*, ch. x. question 1.)

Different
 sorts.

I. Indulgences are divided into *plenary*, and *non-plenary* or *partial*, *temporary*, *indefinite*, *local*, *perpetual*, *real*, and *personal*.

1. A *plenary* Indulgence is that, by which is obtained a remission of *all* the temporal punishment due to sin, either in this life or in the next.

2. A *non-plenary*, or *partial* Indulgence is that which remits only a part of the temporal punishment due to sin: such are Indulgences for a given number of days, weeks, or years. This sort of Indulgences remits so many days, weeks, or years of penance, which ought to be observed agreeably to the ancient Canons of the Church, for the sins which we have committed.

3. *Temporary* Indulgences are those which are granted for a certain specified time, as for seven or more years.

4. *Indefinite* Indulgences are those which are granted without any limitation of time.

5. *Perpetual* Indulgences are those granted *for ever*, and which do not require to be renewed after a given number of years.

6. A *local* Indulgence is attached to certain Churches, Chapels, or other places; it is gained by actually visiting such Church or other building or place, and by observing scrupulously all the conditions required by the Bull granting such Indulgence.

7. A *real* Indulgence is attached to certain movable things, as rosaries, medals, &c. and is granted to those who actually wear these articles with devotion; should the fashion of them cease, so that they cease to be deemed the same articles, the Indulgence ceases. So long, however, as such articles continue, and are reputed to be the same, the Indulgence continues in force, notwithstanding any accidental alteration which may be

made in them, as the affixing of a new string or ribbon to a rosary. INDUL-
 GENCE.

8. A *personal* Indulgence is one which is granted to certain particular persons, or to several persons in common, as to a confraternity or brotherhood. These privileged persons may gain such Indulgences wherever they may happen to be, whether they are in health, in sickness, or at the point of death.

9. Other Indulgences are termed *enjoined penances*, *pœnitentiæ injunctæ*. By them is conferred the remission of so much of the punishment which is due to sins at the Judgment of God, as the sinner would have to pay by canonical penances, or by penances enjoined in all their rigour by the priest.

An Indulgence produces its effect, at the very moment when all the works, prescribed in order to obtain it, are performed. (Richard et Giraud, *Bibliothèque Sacrée*, tom. xiii. p. 366, *et seq.*) Effects.

II. In the primitive Church very severe penalties were inflicted upon those who had been guilty of any sins, whether public or private; and in particular, they were forbidden to partake, for a certain time, of the Sacrament of the Lord's Supper, or to hold communion with the Church. General rules were made upon these subjects: but as it was often found expedient to make a discrimination in the degrees of punishment, according to the different circumstances of offenders, and especially when they showed marks of contrition and repentance, power was given to Bishops by the Council of Nice, to relax or remit those punishments as they should see reason. Every favour of this kind was called a Pardon or *Indulgence*. After the Bishops had enjoyed this privilege for some centuries, and had begun to abuse it, the Popes discovered that in their own hands it might be made a powerful instrument both to promote their ambition and to gratify their avarice. They could not but see, that, if they could persuade men that they had the power of granting Pardons for sin, it would give them a complete influence over their consciences; and if they could at the same time prevail upon them to purchase these Pardons for money, it must greatly augment the wealth of the Roman See; and, therefore, in the XIth century, when the dominion of the Popes was rising to its zenith, and their power was almost irresistible, they assumed to themselves the exclusive prerogative of dispensing Pardons, and carried it to a most unwarrantable length. Instead of confining them, according to their original institution, to the ordinary purposes of Ecclesiastical discipline, they extended them to the punishment of the wicked in the world to come; instead of shortening the duration of earthly penance, they pretended that they could deliver men from the pains of Purgatory; instead of allowing them, gratuitously and upon just grounds, to the penitent offender, they sold them in the most open and corrupt manner to the profligate and abandoned, who still continued in sinful practices. To vindicate in an authoritative manner these scandalous measures of the Pontiffs, an absurd doctrine was invented, which was modified and embellished by Thomas Aquinas in the XIIIth century, and which, among other monstrous declarations, affirmed, that there actually existed an immense treasure of merit, composed of the pious deeds and virtuous actions which the Saints had performed beyond what was necessary for their own salvation, and which, therefore, were applicable to the benefit of others; and that the Roman Pontiff, Origin. Sale.

INDUL-
GENCE.

being the guardian and dispenser of this treasure, was empowered to assign to such as he deemed proper objects a portion of this inexhaustible source of merit, suitable to their respective guilt, and sufficient to deliver them from the punishment due to their crimes. (Bishop Tomline's *Elements of Christian Theology*, vol. ii. p. 355—358; Mosheim's *Eccl. Hist.*, vol. iii. Cent. 12. part ii. ch. iii. sec. 3, 4.) The bare statement of this doctrine is a sufficient refutation of it; and it is scarcely necessary to add, that it has no foundation whatever in Scripture: this indeed has been acknowledged by some of the most learned Romanists themselves. (Bishop Taylor's *Dissuasive from Popery*, part i. ch. i. sec. 3.) It is an arrogant and impious usurpation of a power which belongs to God alone; and it has an obvious tendency to promote licentiousness and sin of every description, by holding out an easy and certain method of absolution.

Revenues
derived by
the Popes
from the
sale.

III. The sale of these Indulgences afforded an ample harvest to the Pontiffs of Rome: in the XVth century, in particular, the disposal of them was become almost a common traffic; and a public sale of them was generally preceded by some specious pretext; for instance, the reduction of the Greeks under the yoke of the Romish Church, a war with heretics, or a crusade against the Neapolitans, &c. Too often the pretences for selling Indulgences were in reality bloody, idolatrous, or superstitious. It was one of the charges brought against John XXIII. at the Council of Constance, in 1415, that he empowered his Legates to absolve penitents from all sorts of crimes, upon payment of sums proportioned to their guilt. Leo X., in order to carry on the magnificent structure of St. Peter's Church at Rome, published Indulgences, with a plenary remission to all such as should contribute towards erecting that magnificent fabric.

The right of promulgating these Indulgences in Germany, together with a share in the profits arising from the sale of them, was granted to Albert, Elector of Metz and Archbishop of Magdeburg; who selected as his chief agent for retailing them in Saxony, John Tetzel, a Dominican friar, of licentious morals, but of an active and enterprising spirit, and remarkable for his noisy and popular eloquence. Assisted by the monks of his Order, he executed the commission with great zeal and success, but with no less indecency; boasting that he had saved more souls from hell by his Indulgences than St. Peter had converted by his preaching: he assured the purchasers of them, that their crimes, however enormous, would be forgiven; that the efficacy of Indulgences was so great, that the most heinous sins, even if one should violate (which was impossible) the mother of God, would be remitted and expiated by them, and the person freed both from punishment and guilt; and that this was the unspeakable gift of God, in order to reconcile men to himself. In the usual form of absolution, written by his own hand, he said: "May our Lord Jesus Christ have mercy upon thee, and absolve thee by the merits of His most holy passion. And I, by His authority, that of His Apostles Peter and Paul, and of the most holy Pope granted and committed to me in these parts, do absolve thee, first, from all Ecclesiastical censures in whatever manner they have been incurred; and then, from all thy sins, transgressions, and excesses, how enormous soever they may be, even from such as are reserved for the cognizance of the Holy See: and, as far as the keys of the holy Church extend, I remit to thee all punishment which thou

deservest in Purgatory on their account; and I restore thee to the holy Sacraments of the Church, to the unity of the faithful, and to that innocence and purity which thou didst possess at Baptism; so that, when thou diest the gates of punishment shall be shut, and the gates of the Paradise of delights shall be opened: and if thou shalt not die at present, this grace shall remain in full force, when thou art at the point of death. In the name of the Father, and of the Son, and of the Holy Ghost. Amen."* These and similar extravagant assertions respecting the efficacy of Indulgences, together with the gross abuses practised in granting them, were among the immediate and principal causes of the Reformation. (Robertson's *Hist. of Charles V.*, vol. ii. p. 95—98; Mosheim's *Eccl. Hist.*, vol. iv. Cent. 16. ch. ii. sec. 1.) They continued to the last to be sold at Rome, and were to be purchased by any who were weak enough to buy them; and so lately as the year 1800, a Spanish vessel was captured near the coast of South America, freighted (among other things) with numerous bales of Indulgences for various sins, the price of which, varying from half a dollar to seven dollars, was marked upon each. They had been bought in Spain, and were intended for sale in South America. (Hamilton's *Tracts on some leading Errors of the Church of Rome*, p. 68.) The testimonies of Romanist writers to the sale of Indulgences may be seen in Dr. Philpott's *Letters to Mr. Butler*, p. 151—153, or in Dr. Hales's *Analysis of Chronology*, vol. ii. part ii. p. 1019—1022; and especially in *Taxatio Papalis, being an Account of the Tax Books of the United Church and Court of Modern Rome*, London, 1825, 8vo.

For an account of the discipline of the Romish Church concerning Indulgences, the dispositions for gaining them, with a Catalogue of apocryphal, false, revoked, or otherwise null and void Indulgences, and another Catalogue of those which are genuine and common to all the faithful members of that Church, the reader is referred to Richard and Giraud's *Bibliothèque Sacrée*, tom. xiii. p. 375—383.

A very curious account of the Indulgences afforded to strangers who visited Rome, and whose conflux to that city materially increased the Papal Revenues, is given in Arnold's *Chronicle, or Customs of London*. It is reprinted, but not correctly, in Stavely's *Romish Horseleech*. We extract it as below from the Edition of the *Customs of London*, 1811, omitting the Pardons granted in the minor Churches, and the Stations.

Careful and attentive performance; steady application to labour; laboriousness; assiduity or diligence in labour.

Industry, in Elyot, is applied to that *expertness* which is the result of care and attention.

It [*industrie*] is a qualitie, procedyng of wytte and experiēce, by whiche a man perceyueth quickly, inuenteth freshely, and counsayleth spedily; wherfore they that be called *industrious*, do most craftely and depely vnderstande in al affayres, what is expedient, and by what meanes or wayes they may sonest exployte them. Justyce dystributiue hath regarde to the persone, iustyce commutative hath no regarde to the person, but onely consideringe the *inequalite*, whereby the one thyng exceedeth the other, indeuoureth to brydge them bothe to an *equalite*.

Sir Thomas Elyot. *The Governour*, book iii. ch. i.

Meane while I wonder at so proud a backe,
Whiles th' empty guts lowd rumblen for long lacke:
The belly envieth the back's bright glee,
And murmurs at such *inequality*.

Hall. *Satire* 17. book iii.

But Numa considering the *inequality* stood upon eleven daies, for that the twelve revolutions of the moon are run in 354 daies, and the revolution of the sun in 365 daies, he doubled the 11 daies, whereof he made a moneth, which he placed from two years to two years after the moneth of February.

Sir Thomas North. *Plutarch*, fol. 59. *Numa*.

Such a divulsion may be made in glass by but an *inequal* motion between the neighbouring parts.

Boyle. *Works*, vol. i. p. 459. *An Essay, &c. of the Particles of Quiescent Solids*, sec. 18.

Notwithstanding which *inequality* of number, it was unanimously resolved in a council of war to fight the Dutch fleet.

Ludlow. *Memoirs*, vol. ii. p. 3.

We sometimes find men complaining of *inequalities* in events, which were indeed the effects of a most *equal* providence.

Warburton. *Works*, vol. v. p. 145. *The Divine Legation*, book v. sec. 4.

INEQUITABLE, *in*, privative, and *equitable*; see **EQUITY**; from Lat. *æquus*. See **INEQUAL**, *ante*.

Not even or *equal*; not alike to all; and, consequently, partial, unjust.

Nor when they were in partnership with the farmer, as often was the case, have I heard that they had taken the lion's share. The proportions seemed not *inequitable*.

Burke. *Works*, vol. v. p. 252. *On the Revolution in France*.

Wherein there appears no weakness nor humour, no spark of arbitrary or *inequitable* disposition, but unreserved and unnigardly goodness.

INERGETICAL. See **ENERGIZE**. Having no *energy* or power to act or in action; powerless.

And consequently, that those eminent stars and planets, that are in the heavens, are not to be considered by us as sluggish *inergetical* bodies, or as if they were set only to be as bare candles to us, but as bodies full of proper motion, of peculiar operation, and of life.

Boyle. *Works*, vol. v. p. 640. *The General History of Air*.

INERRABLE, } Lat. *inerrabilis*; *in*, privative,
INERRABLENESS, } and *errabilis*, from *errare*, to
INERRABILITY, } stray; to go astray; out of the
INERRINGLY. } right way. See **TO ERR**.

That cannot go astray, or out of the right way, that cannot go or be wrong; cannot mistake or be mislead or misguided; infallible.

He [the sonne] is the profoundite of thy *inerrable* wysedom, so y^e he knew what was profytable for us, and what was acceptable to thee.

Fisher. *Seuen Psalmes*, sig. N. 3.

The carefulest ambassador may perhaps swerve from his message; these (which was one of the priviledges of the apostles) were through the guidance of God's Spirit, in the acts of their function *inerrable*.

Hall. *Works*, vol. iii. fol. 131. *Episcopacy by Divine Right*.

The infallibility, and *inerrableness*, which is assumed, and inclosed by the Romish church, without any *inerrable* ground to build it on, being taken for an unquestionable principle, is (by the security it brings along with it) apt to betray men to the foulest whether sins, or errors, whensoever this pretended infallible guide shall propose them.

Hammond. *Works*, vol. i. fol. 479. *Of Fundamentals*, ch. xii.

Of the last part of this our profession, it is now meet, that I add some few words, *viz.* what our opinion is of the *inerrability* of a General Council, truly so called, and qualified as hath been formerly described.

Id. *Ib.* fol. 557. *Of Heresie*, sec. 13.

That divers limners at a distance, without either copy or designe, should draw the same picture to an undistinguishable exactness, both in form, and colour, and features; this is more conceivable, then that matter, which is so diversified both in quantity, quality, motion, site, and infinite other circumstances, should frame itself so *absolutely* [in some editions *innerringly*] according to the idea of its kind.

Glanvil. *The Vanity of Dogmatizing*, ch. v. p. 45.

INERT,

INERTNESS.

} It. and Sp. *inerte*; Lat. *iners*; ars
} *in quo non erit ulla*; see **ART**; from
} Lat. *ars*; Gr. *ἀρετή*, strength or skill.
Having no power, or strength, or activity; inactive, slothful, sluggish; senseless, motionless.

If a disease or old age can rase out the memory of past actions, even while we are in one and the same condition of life, certainly so long and deep a swoon as is absolute insensibility and *inertnesse*, may much more reasonably be thought to blot out the memory of another life, whose passages probably were nothing like the transactions of this.

Glanvil. *The Vanity of Dogmatizing*, ch. v. p. 60.

If to your builder you will conduct give,
A power to choose, to manage and contrive,
Your idol chance, suppos'd *inert* and blind,
Must be enroll'd an active conscious mind.

Blackmore. *Creation*, book iv.

Ye powers! whose mysteries restor'd I sing,
To whom Time bears me on his rapid wing,
Suspend awhile your force *inertly* strong,
Then take at once the poet and the song.

Pope. *The Dunciad*, book iv. l. 7.

Ev'n the favour'd isles
So lately found, although the constant sun
Cheer all their seasons with a grateful smile,
Can boast but little virtue; and, *inert*
Through plenty, lose in morals, what they gain
In manners—victims of luxurious ease.

Couper. *The Task*, book i.

It is not humanity, but laziness and *inertness* of mind which produces the desire of this kind of indemnities.

Burke. *Works*, vol. vii. p. 195. *On the Policy of the Allies*.

INESCATE, } It. *inescare*; Lat. *inescare*, (*in*,
INESCATION. } and *esca*, food, from *esum*, past participle of *ed-ere*, to eat,) to give or offer food to.

To tempt with *food*, or a bait of *food*; to tempt, to allure, to entice.

Proteus like in all formes and disguises [they] goe abroad in the night, to *inescate* and beguile young women.

Burton. *Anatomy of Melancholy*, fol. 496.

Herein lies true fortitude and courage, in overcoming all the deceitful allurements and *inescations* of flesh and blood.

Hallywell. *Excellence of Moral Virtue*, (1692) p. 107.

INESPECIALLY, *in*, and *especially*. See **ESPECIAL**. Particularly.

Inespecially for as much as a great number of hys souldyers beinge eyther deade or naymed wyth woundes, the matter was driven to so hard a point, that fewe remayned able to make defence.

Arthur Goldyng. *Cæsar. Commentaries*, book v. fol. 136.

Inespecially, considering howe great a corsye it was to theyr hartes for them which bare away the renowne of cheualry and feates of warre from all other nations, to haue lost so much of that theyr estymacion, that they should be brought in subjection and bondage to the people of Rome.

Spenser. *The Mourning Muse of Thestylis*.

Glabrio, because he would bring some displeasure particularly, and most of all upon Cato, said he would giue ouer his suite for the censourship, since that there was another competitour as newly come up as himselfe, (whereat the nobles indeed tooke indignation inwardly, although they said nothing) who pursued the cause so against him, even with incredible and *inestimable* perjurie, (i. e. too great for the fine to be *estimated*.)

Holland. *Livius*, fol. 980.

So Paul and John that into Patmos went,
Heard and saw things *inestimably* excellent.

More. *On the Soul*, part iii. can. 3. stan. 7.

Verse shows a rich *inestimable* vein,
When, dropp'd from heaven, 'tis thither sent again.

Waller. *Of Divine Poesy*, can. 1.

Such is his goodness to those he is pleased thus to deal with, in proposing and reserving them a crown in some sort proportionate to, and yet *inestimably* outvaluing, the toils and difficulties requisite to obtain it.

Boyle. *Works*, vol. ii. p. 388. *Occasional Reflections*, sec. 3.

Are there on earth (let me not call them men)
Who lodge a soul immortal in their breasts;
Unconscious as the mountain of its ore;
Or rock of its *inestimable* gem?

Young. *The Complaint*. Night 5.

INE'VIDENT, } In, and evidens, e. and videns.
INE'VIDENCE. } from vid-ere, to see; Gr. εἶδ-εἶν.

Not being or making clear, not showing, clearly to the sight; not making manifest, or discovering plainly; obscure, unmanifest.

These suppositions therefore are not sufficient to explicate the first productions of perfect animals, at least without multiplication of *inevident* and unexplicable suppositions.

Hale. *Origin of Mankind*, ch. iv. sec. 4.

If they [mankind] have at any time happened upon some sound and substantial truth, they commonly fix unto it explications and additions of their own, which many times, by their *inevidence*, absurdity, or incongruity, draw in question the truth itself to which they are appendicated.

Id. *Ib.* ch. ii.

Charge them (saith St. Paul) that are rich in this world, that they be not high-minded nor trust in uncertain riches: (ἐπὶ πλούτου ἀδολύτητι, in the obscurity, or *inevidence* of riches.)

Thus mad and frantic.

Drayton. *The Moon-Calf*.

By dipping voluntarily his fingers' end, yet with shew of great remorse, in the blood of Strafford, whereof all men clear him, he thinks to escape that sea of innocent blood wherein his own guilt *inevitably* hath plung'd him all over.

Milton. *Works*, vol. i. fol. 371. *An Answer to Eikon Basilike*.

By liberty, I do understand neither a liberty from sin, misery, servitude, nor violence, but from necessity, or rather necessitation; that is, an universal immunity from all *inevitability* and determination to one.

Bishop Bramhall against Hobbes.

Alcides bore not long his flying foe,
But, bending his *inevitable* bow,
Reach'd him in air, suspended as he stood,
And in his pinion fix'd the feather'd wood.

Dryden. *Ovid. Metamorphoses*, book xii.

If they could persuade themselves to believe that their miseries were *inevitable*, it was just as well as if they could force themselves to think that those miseries were no evils.

Warburton. *Works*, vol. iii. p. 255. *The Divine Legation*, book iii. sec. 6.

People, not very well grounded in the principles of publick morality, find a set of maxims in office ready made for them, which they assume as naturally and *inevitably*, as any of the insignia or instruments of the situation.

Burke. *Works*, vol. ii. p. 199. *On a late State of the Nation*.

INEXCITABLE, in, privative, and excitable, from excite, q. v. Lat. *excitare*, to move or raise up.

That cannot be raised or roused.

And then she rous'd him from his rest, and said;

Martinus.

That cannot be freed, or cleared, or exempted from blame or accusation; that cannot be excused, released, or discharged from obligation or penalty; that cannot be forgiven.

Wherefore thou art *unexcusable* ech man that demest.

Wiclif. *Romayns*, ch. ii. fol. 70.

Therefore art thou *inexcusable* O man whosoever y^a be that iudgeth,
Bible, Anno 1551.

Now that these heavenly mansions are to be void, you that shall hereafter be found unlodged will become *inexcusable*; especially since virtue alone shall be sufficient title, fine, and rent.

Carew. *Cælum Britannicum*.

Why was it else that the presence of the persons should thus *inexcusably* make good the relation, if God had not meant the *inexcusableness* of Jehoram.

Hall. *Works*, vol. i. fol. 1263. *Contemplations. The Shunamite Swing*.

Yet will it *inexcusably* condemn some men, who having received excellent endowments, have yet sat down by the way, and frustrated the intention of their habilities.

Sir Thomas Brown. *Vulgar Errours*, book i. ch. v.

Of all hardnesses of heart, there is none so *inexcusable* as that of parents towards their children.

Spectator, No. 181. col. 2.

From what hath been said we see the horrible guilt, and the utter *inexcusableness* of those men, that notwithstanding the gospel means of salvation, that have been so long afforded them, do still continue infidels in their judgment or immoral in their lives.

Sharpe. *Works*, vol. i. p. 173. *Sermon* 6.

He that sins against these inward checks, presumes, and what is more, he presumes *inexcusably*.

South. *Sermons*, vol. vii. p. 229.

Sir, I should be *inexcusable* in coming after such a person [Mr. Glover] with any detail; if a great part of the members who now fill the house had not the misfortune to be absent when he appeared at your bar.

Burke. *Works*, vol. iii. p. 37. *On Conciliation with America*.

Shakspeare. *Merchant of Venice*, fol. 179.

INEXHALABLE, *in*, privative, and *exhalable*, from *exhale*, *q. v.* Lat. *exhalare*, *ex*, and *halare*, to breathe.

That cannot be breathed out, emitted, or evaporated.

So a new laid egg will not so easily be boiled hard, because it contains a greater stock of humid parts; which must be evaporated, before the heat can bring the *inexhalable* parts into consistence.

Sir Thomas Brown. *Vulgar Errours*, book vi. ch. xxviii.

INEXHA'USTED, Lat. *inexhaustus*, *in*, and
INEXHA'USTIBLE, *exhaustus*, past participle of
INEXHA'USTIBLY, *exhaurire*, to draw out, (*ex*,
INEXHA'USTIVE, and *haurire*; Gr. *ἀπ-ύειν*, to draw.) See To EXHAUST.

That cannot be drawn out or forth, drained or emptied; consequentially, cannot be worn out, wearied, or fatigued.

It is not without grief and indignation, that I behold that divine science employing all her *inexhaustible* riches of wit and eloquence, either in the wicked or beggarly flattery of great persons, or the unmanly idolizing of foolish women, or the wretched affectation of scurril laughter, or at best on the confused antiquated dreams of senseless fables and metamorphoses.

Cowley. *Poems*. Preface.

Nay, we might yet carry it farther, and discover in the smallest particle of this little world, a new *inexhausted* fund of matter, capable of being spun out into another universe.

Spectator, No. 420. col. 3.

Virgil, above all poets, had a stock, which I may call almost *inexhaustible*, of figurative, elegant, and sounding words.

Dryden. *Dedication to the Æneid*.

But when sin has lodged the sinner in hell the cup which God then administers shall be all justice, without mercy, all wrath and venom, all dregs, and yet no bottom; a cup never to be drank off, *inexhaustibly* full, inconceivably bitter.

South. *Sermons*, vol. x. p. 331.

Ah, where find words
Ting'd with so many colours; and whose power,
To life approaching, may perfume my lays
With that fine oil, those aromatic gales
That *inexhaustive* flow continual round?

Thomson. *Spring*.

But where consenting wishes meet, and vows
Reciprocally breath'd confirm the tie,
Joy rolls on joy, an *inexhausted* stream!

Smollett. *The Regicide*, act i. sc. 3.

It is not so easy as it might seem to find comick subjects capable of a new and pleasing form; but history is a source, if not *inexhaustible*, yet certainly so copious as never to leave the genius aground.

Johnson. *Works*, vol. iii. p. 49. *A Dissertation on Greek Comedy*.

INEXI'STENT, *In*, and *existent*, from *exist*, *q. v.*
INEXI'STENCE, Lat. *existere*, or *ex-sistere*, to
INEXI'STENCY, stand out, (*ex*, and *sistere*, to
INEXI'STING, stand.)

In, privative. Not standing out; *sc.* from the surface. Consequentially,

Not being, not living; not having life or being.

In, augmentative. Being or living in, having life or being in; inbeing; indwelling, inherent.

Although there were more things in nature than words which did express them, yet even in these mute and silent discourses, to express complexed significations, they took a liberty to compound and piece together creatures of allowable forms into mixtures *inexistent*.

Sir Thomas Brown. *Vulgar Errours*, book v. ch. xx. p. 319.

VOL. XXIII.

Empedocles and Democritus, deceiving themselves, unawares destroy all generation of things out of one another, leaving a seeming generation only: for they say that generation is not the production of any new entity, but only the secretion of what was before *inexistent*; as when divers kinds of things coufounded together in a vessel, are separated from one another.

Cudworth. *Intellectual System*, book i. ch. i. sec. 13.

No real substantial entity (they taught) can either spring of itself out of nothing, or be made out of any other substance distinct from it, because nothing can be made *ἐκ μηδενος*; *ἐκ υπάρχοντος* ἢ *προϋπάρχοντος*, from nothing either *inexisting* or preexisting.

Id. *Ib.* book i. ch. i. sec. 31.

Though it could be proved, that earth is an ingredient actually *inexistent* in the vegetable and animal bodies, whence it may be obtained by fire; yet it would not necessarily follow, that earth, as a preexistent element, does with other principles convene to make up those bodies, whence it seems to have been separated.

Boyle. *Works*, vol. i. p. 578. *The Sceptical Chymist*.

We think we have made complete enumerations of the several ways of *inexistence* of an attribute in a subject, or of an operation of one thing upon another, when indeed we have overlooked one or other, and perhaps that, which we have thus pretermitted, may be the true one.

Id. *Ib.* vol. iv. p. 457. *Advices in judging of Things said to transcend Reason*.

They [Spirit] are not divided from the subsistence of the Father, but are in the Father, and the Father in them, by a certain *inexistence*, or inhabitation so called.

Bishop Bull. *Works*, vol. ii. p. 188. *Discourse 5*.

But if one were to form a notion of consummate glory under our constitution, one must add to the above-mentioned felicities a certain necessary *inexistence* and disrelish of all the rest without the prince's favour.

Spectator, No. 139. col. 3.

If you examine what those forms and ideas were you will find they were not God, nor attributes, nor yet distinct substances, but *inexistencies* in him; which *inexistency* was a very convenient term, implying somewhat that was both a substance and not a substance, and so carrying the advantages of either.

Search. *Light of Nature*, vol. ii. part. i. ch. xv. p. 210. *Omniscience*.

The ancients, holding the eternity of forms and ideas, supposed them substances *inexisting* within the divine mind: what is the proper import of *inexisting*, or the distinction between a subsistence and a substance, I shall not attempt to explain, having no clear apprehension of it myself.

INEXPEDIENT, *in*, and *expedient*, q. v. from Lat.
ex-pedire, (*pedem retentum liberare*, to set at liberty a
foot held fast.)

Expedient is applied literally when the *feet* are at
liberty, *inexpedient* when they are not so, and, conse-
quently,

Not having free, easy motion or power of motion;
not easy or convenient; inconvenient, unsuitable, unfit,
improper.

There were several conferences between Ridley and Hooper, not
without heat; Hooper maintaining, that if it was not unlawful, yet it
was highly *inexpedient* to use those ceremonies.

Burnet. History of the Reformation, Anno 1550.

By this subscription they seemed to allow the lawfulness of the

Of unknown Etymology. Vossius.

That cannot be atoned for by *pious* deeds; cannot be
atoned for, or repaired, or averted.

But Anniball found them streight, and smelt this jugling, and was
not ignorant that he was the onely man that the Romanes shot at,
and howsoever peace was graunted to the Carthaginians, yet they
continued an endlesse and *inexpiable* warre with him alone still.

Holland. Livius, fol. 851.

Old Domitian, farre unlike unto father and brother, stained the
memoriall of his name with *inexpiable* detestation.

But now to rest *inexpiate* were much too rude a part.
Chapman. Homer. Iliad, book ix. fol. 126.

Should I offend, by high example taught,
'Twould not be an *inexpiable* fault;
The crimes of malice have found grace above,
And sure kind heaven will spare the crimes of love.

Pomfret. Love's Triumph over Reason.

Excursions are *inexpiably* bad;
And 'tis much safer to leave out than add.
Roscommon. Essay on Translated Verse.

As well might we in England think of waging *inexpiable* war upon
all Frenchmen for the evils which they have brought upon us in the
several periods of our mutual hostilities.

Burke. Works, vol. v. p. 257. *On the Revolution in France.*

INE'XPLICABLE, } Fr. and Sp. *inexplicable*;

INEXPRESSIVE. } *or squeeze out, to force out by pressure.*

That cannot be forced out; cannot be uttered, unutterable; cannot be told. G. Douglas says, *untellyble*.

Who since the morning hour set out from heav'n,
 Where God resides, and ere mid-day arriv'd
 In Eden, distance *inexpressible*
 By numbers that have name.

Milton. Paradise Lost, book viii. l. 113.

They shall perfectly love and delight in each other; and by an *inexpressible* union of sublimated charity, each shall make what the other enjoys his own, and altogether shall make up in different notes one sweet harmonious consort in the praises of God, the fountain of their bliss.

Bishop Bull. Works, vol. i. p. 194. Sermon 7.

That account of the hymns which our first parents used to hear them sing in these their midnight walks is altogether divine, and *inexpressibly* amusing to the imagination.

Spectator, No. 321.

What *inexpressible* grandeur does the following rural image in Isaiah, for instance, receive from the intervention of the Deity: The nations shall rush like the rushings of many waters; but God shall rebuke them, and they shall fly far off.

Blair. Lecture 41. vol. iii. p. 189.

It [the hair] is universally black, and is formed into a kind of circular wreath upon the top of the head, where it is fastened with a bodkin, in a taste which we thought *inexpressibly* elegant.

Cook. Voyages, vol. iii. book ii. ch. xii. p. 313.

No features then the poet's mind would trace,
 But one black vizard blot out all the face.
 O! glorious times, when actors thus could strike,
 Expressive, *inexpressive*, all alike!

Lloyd. Prologue to Hecuba, spoken by Mr. Garrick, 1761.

And you, ye host of saints, for ye have known
 Each dreary path in life's perplexing maze,
 Tho' now ye circle yon eternal throne
 With harpings high of *inexpressive* praise,
 Will not your train descend in radiant state,
 To break with mercy's beam this gath'ring cloud of fate.

That cannot be beaten or overpowered, conquered, overcome, or subdued; unconquerable, impregnable.

The Kinge Balthazar with his nobles were festing and banketing in the night in moste securite) for that thei thought their cite to be *inexpugnable*.

Joye. Exposicion of Daniel, ch. i.

He maketh hys assayes and assaultes here thereat, and leeseth not onely hys labour in the ende, but also by some of his own argumentes, wherewith he would impugn it, maketh it rather more strong, and proueth it playn *inexpugnable*.
Sir Thomas More. Workes. The Second Part of the Confutation of Tyndall.

It seemed *inexpugnable*, both for the height of the walls, as also for the multitude of souldiers they had to defend it.

Sir Thomas North. Plutarch, fol. 601. Julius Cæsar.

[He] can, out of the perfect knowledge of the nature of things, distinctly plead the unavoidableness of sundry ill emergencies from that impossibility and incommensurability that is *inexpugnably* lodged up in the perverse and unreclaimable Hyle.

Henry More. The Philosophical Cabbala. Appendix to Defence, ch. v.

Its lofty embattled walls, its hold, projecting, rounded towers, that pierce the sky, strike the imagination, and promise *inexpugnable* strength. But they are the very things that make its weakness.

Burke. Works, vol. ix. p. 112. On a Regicide Peace.

INEXTENDED. See *Unextended*. *In*, privative, and *extend*; Lat. *extendere*, to stretch out, *ex*, and *tendere*; Gr. *τείνειν*.

Not stretched out; *sc.* over any portion of space. See the Quotation.

If they suppose it [the soul] to be *inextended*, or to have no parts or quantity, I confess I can have no manner of idea of the existence or possibility of such an *inextended* being without consciousness or active power.

That cannot be put out, erased, or obliterated; cannot be put out or quenched, annihilated or destroyed.

The chaffe and strawe he shall burne up with *inextinguible* fyre.
Sir Thomas More. Workes, fol. 825. Confutation of Tyndall, book ix.

So that Ammonius made answer in this wise: And how is it that other men who adore the *inextinguible* fires, who keep and preserve the same religiously for the space of an infinite number of years, one after another, could not as well perceive and observe so much?

Holland. Plutarch, fol. 1076. Why Oracles cease to give Answers.

Being once afire, it [bitumen] is *inextinguible*, unlesse it be by throwing dust upon it.

Id. Ammianus Marcellinus, fol. 444. Annotations upon book xix.

So under fierie cope together rush'd
 Both battels maine, with ruinous assault
 And *inextinguishable* rage.

Milton. Paradise Lost, book vi. l. 217.

If at any time you see old and long acquaintances broken off with immortal, *inextinguishable* feuds, it is a thousand to one odds but it has happened by the base offices of some devilish tongue which has passed between them.

South. Sermons, vol. vi. p. 115.

The just Creator condescends to write,
 In beams of *inextinguishable* light,
 His names of wisdom, goodness, pow'r, and love,
 On all that blooms below, or shines above.

God made thee perfect, not immutable;
And good He made thee, but to persevere
He left it in thy power, ordain'd thy will
By nature free, not over-rul'd by fate
Inextricable, or strict necessity.

Milton. *Paradise Lost*, book v. l. 528.

There is no perplexity in thee, my God, no *inextricableness* in thee.
Donne. *Devotions*, (1625,) p. 122.

[Rosamond's labyrinth] was altogether under ground, being vaults arched and walled with brick and stone, almost *inextricably* wound one with another.

Drayton. *England's Heroical Epistles. Rosamond to King Henry. Annotations.*

But the equal fate
Of God withstood his stealth; *inextricate*
Imprisoning bands, and sturdy churlish swaines,
That were the heardsmen, who withheld with chains
The stealth attempter.

Chapman. *Homer. Odyssey*, book xi. fol. 168.

Not on the ground that haughty Fury [Até] treads,
But prints her lofty footsteps on the heads
Of mighty men, inflicting as she goes
Long festering wounds, *inextricable* woes.

Pope. *Homer. Iliad*, book xix.

Nor will that man (till it is perhaps too late) be apt to attempt an escape from the pollutions of the world, that stays till he can see none more *inextricably* intangled in them than himself.

Boyle. *Works*, vol. ii. p. 362. *Occasional Reflections*, refl. 5. sec. 1.

There is no great principle, either in physics or in natural theology, but which, if we be not on our guard, and wise enough to stop at the extent of our ideas, will lead us into *inextricable* difficulties.

Yea, ascertained he was *infallibly* that they [the vnuariable decrees] should in their dewe seasons come to passe.

Bale. *Image*, part ii. ch. xvi. p. 107.

And how dangerous it were to examine antiquities by a foreign writer, (especially in those times,) you may see by the stories of the Hebrews, delivered in Justin, Strabo, Tacitus, and such other discording and contrary (besides their infinite omissions) to Moses' *infallible* context.

Selden. *Illustrations to Drayton's Poly-olbion*, song 1.

So was he with them, as he was with his domesticks, their predecessors, not in the immediatenesse and extraordinary way of calling,

not in the admirable measure and kinds of their *χαρίσματα* or gifts, not in the *infallibleness* of their judgement, nor in the universality of their charge.

Hall. *Works*, vol. iii. fol. 177. *Episcopacy by Divine Right*.

The swine which nature secretly doth teach,
Only by fasting, sicknesses to cure,
Now but in vain is to itself a leach,
Whose sudden end *infallibly* is sure.

Drayton. *Moses, his Birth and Miracles*, book ii.

How shall the licensers themselves be confided in, unless we can confer upon them, or they assume to themselves above all others in the land, the grace of *infallibility* and uncorruptedness?

Milton. *Works*, vol. i. fol. 148. *Of Unlicensed Printing*.

For not two or three of that order, as some of them would impose upon us, but almost the whole body of them, are of opinion that their *infallible* master has a right over kings, not only in the spirituals but temporals.

Dryden. *Religio Laici. Preface*.

If a lewd and wicked Pope may yet have the Holy Ghost dwelling in him, and directing him *infallibly*, why may not an ill king do so good a work as set a reformation forward?

Burnet. *History of the Reformation*, vol. i. p. 17. *Preface*.

The highest *infallibility* in the teachers doth not prevent the possibility or the danger of mistaking in the hearers. And whatsoever any vainly pretend, nothing can do it but transfusing the spirit of *infallibility* into all.

Stillingsfleet. *Sermon 2*. vol. iv. p. 46.

When our Saviour was risen from the dead, it could not be said of him that he appeared only like a phantom for a moment; for he showed himself alive to his apostles by many repeated *infallible* proofs, being seen of them forty days.

Jortin. *Remarks on Ecclesiastical History*, vol. ii. p. 5.

If you allow yourselves always to stretch to the utmost point of innocence and safety, beyond that point you will *infallibly* be hurried, when passion shall arise in its might to shake the heart.

Hall. *Works*, vol. ii. fol. 113. *John Baptist beheaded*.

No wound, which warlike hand of enemy
Inflicts with dint of sword, so sore doth light,
As doth the poysnous sting which *Infamy*
Infixeth in the name of noble wight.

Spenser. *Faerie Queene*, book vi. can. 6.

First, he for whom thou dost this villany;
Though pleas'd therewith, will not avouch thy fact,
But let the weight of thine own *infamy*
Fall on thee unsupported and unback'd.

Daniel. *History of Civil Wars*, book iii.

O'er Mænalus I took my steepy way,
By caverns *infamous* for beasts of prey:
Then cross'd Cyllene, and the piny shade
More *infamous* by curst Lycaon made.

Dryden. *Ovid. Metamorphoses*, book i. *The Iron Age*.

If any thing be of ill report, and looks *infamously* to the sober
part of mankind; why that very consideration is enough to deter you
from the practice of it: for you are to recommend your religion to
all the men in the world, by all the ways that are possible.

Sharpe. *Works*, vol. i. p. 233. *Sermon 9*.

But the afflicted queen would not yield; and said, she would not
damn her soul, nor submit to such *infamy*: that she was his wife, and
would never call herself by any other name.

Burnet. *History of the Reformation*, Anno 1553.

Infamous punishments are mismanaged in this country, with re-
spect both to the crimes and the criminals.

Paley. *Moral Philosophy*, vol. ii. p. 302. *Of Crimes and Punishments*.

Now was the time to unlock the sealed fountain of royal bounty
which had been *infamously* monopolized and huckstered, and let to

Burke. *Works*, vol. ii. p. 242. *On the Cause of the Present Discontents*.

INFANDOUS, Lat. *infandus*. See INFANT, *infra*.

That ought not to be spoken; too dreadful to be
spoken.

This *infandous* custom of swearing, I observe, reigns in England
lately more than any where else.

Howell. *Letter 11*. book i. sec. 5. p. 208.

INFANG-THEFE, —*theof* — *enetheof* — *nthiefe*, for
the termination is given in each of the above forms.
Sax. *in*, within, *fanġ*, to take, and *æeof*, a thief; a right
granted by the King to any Lord of a Manor, by which
he might take and punish thieves within his own land,
or as it is expressed in that which by courtesy is called
Latin, *Barones qui libertates habent de sok et sak, toll et theame*,
Infangthief, Outfangthief, possunt judicare in Curiâ suâ, si aliquis inventus fuerit infrâ libertatem suam, saisitus in aliquo latrocinio manifesto: sicut hand-habband and bak-bearand, et insecutus fuerit per siker-bourgh. By some this right is restricted
to the capture of the Baron's own men within his own
lands. This distinction matters little now, for the pri-
vilege, as we need not remark, has long since become
obsolete.

In John Bromton's *Chronicon* we find, *Infangthef, thel-find inward, est infrâ suum attachiamentum ca-*

Ireland mean-while with aduerse armes
Should also be ore-layde.

Warner. Albion's England, book x. ch. lvi.

Hail native language, that by sinews weak
Didst move my first endeavouring tongue to speak,
And mad'st imperfect words with childish trips,
Half unpronounc'd, slide through my *infant-lips*.

Milton. Odes. Vacation Exercise, l. 4.

But they were but *infant-mischiefs*, which for the most part we
have already observed, as the issues of vain and idle talking.

Taylor. Sermon 24. part iii. fol. 231.

Now, as they enter'd, doleful screams they hear;
And tender cries of *infants* pierce the ear;
Just new to life, by too severe a doom,
Snatch'd from the cradle to the silent tomb.

Pitt. Virgil. Æneid, book vi.

This happy day two lights are seen,
A glorious saint, a matchless queen;
Both nam'd alike, both crown'd appear;
The saint above, th' *infanta* here.

Waller. To her Majesty on her Birthday.

First the shrill sound of a small rural pipe
(Not loud like trumpets, nor adorn'd as now)
Was entertainment for the *infant-stage*.

Roscommon. Horace. Art of Poetry.

The little, or almost insensible impressions on our tender *infancies*,
have very important and lasting consequences: and there 'tis as in
the fountains of some rivers, where a gentle application of the hand
turns the flexible waters into channels, that make them take quite
contrary courses; and by this little direction given them at first in the
source, they receive different tendencies, and arrive at last at very re-
mote and distant places.

Locke. Works, vol. iii. fol. 1. Of Education, sec. 1.

The flie lies all the winter in these halls in its *infantile* state, and
comes not to its maturity till the following spring.

Derham. Physico-Theology, book viii. ch. vi. note 28.

The private gentlemen of the *infantry* will be able to shift for

Blackstone. Commentaries, book i. ch. xvii.

Yet oft before his *infant* eyes would run
Such forms as glitter in the Muse's ray
With orient hues, unborrow'd of the sun.

Gray. Progress of Poesy, vol. ii.

Nay, to accumulate the merit of the service by bringing it still
nearer home, the madness did not cease to rage till it terminated in
infanticide, or in offering up to their grim idols (instead of them-
selves) the children of their bowels.

*Warburton. Works, vol. vi. p. 285. The Divine Legation, book ix.
ch. ii.*

The children at any age, however incapable of choice in other re-
spects, however immature, or even *infantile*, are yet considered suffi-
ciently capable to disinherit their parents, and totally to subtract
themselves from their direction and control, either at their own option,
or by the instigation of others.

Burke. Works, vol. ix. p. 328. Tracts on the Popery Laws.

Disgrac'd by a want of choice, and frequently by a confused ill
disposition of his matter, and blemished with a degree of credulity
next to *infantine*, it [Bede's *Ecclesiastical History*] is still a valuable,
and for the time a surprising, performance.

Burke. Works, vol. x. p. 280. An Abridgment of English History.

INFANCY, in Law, continues both in males and fe-
males, until they attain the age of twenty-one years. In
childhood, before the Infant becomes capable of sup-
porting himself, and at any subsequent period, if he
should be rendered incapable of so doing by sickness or
accident, the father is bound by Law to support him;
and if the father be the cause of his death by wantonly
neglecting to provide him with the common necessities
of life, he will be guilty of murder; and a master is in
the same way answerable for the death of his Infant
apprentice. The father, however, is only bound to sup-
port him when he is incapable of supporting him-
self; therefore, if he refuses to work when he has both
the power and the opportunity, the liability of the father
ceases. If a tradesman, relying on the responsibility
of the father, supply an Infant with goods suitable to
his rank and station, it is for the jury to say whether,
under the particular circumstances of the case, they
will or will not presume that the Infant was authorized
by the father to make the purchase. Without such
authority, either express or implied, the father will not
be liable for the price of the goods; and in the absence
of any evidence of express authority, the father may
prove that he allows the Infant a reasonable sum for
his expenses, which proof will be sufficient to rebut the
presumption of an implied authority. The education
of the Infant is in general left to the sole discretion of
the father; but if he has property independent of the
father, the Court of Chancery will interfere in his be-
half, more especially if the father's conduct is calculated
to deprave the moral or religious principles of youth.
The education of the poor is not entirely left to chance;
the overseers of the Parish, with the consent of two
Justices of the Peace, may bind poor children as appren-
tices to any of the inhabitants or occupiers of land
within the Parish, who cannot refuse the burthen, al-
though they may be clergymen or gentlemen of fortune,
and little in the habit of taking apprentices.

The father may chastise his child in moderation, is
entitled to the custody of his person, and may employ
force either to protect him from injury or to regain pos-
session of him if he is improperly taken away. We
have high authority for this: Lady Coke, with whom
her husband, the great lawyer Sir Edward Coke, lived
on the worst possible terms, had in his absence removed
his daughter to a place of concealment, in order that she
might not be married to a younger brother of the Earl
of Buckingham, the favourite of James I. Sir Edward
discovering where she was confined, went with a large
party of armed men, broke open the doors of the house,
and carried her back in triumph. But a father with less
spirit may obtain redress in a more peaceable manner,
by applying to a Court of Law, which will immediately
command the offender by writ of *Habeas Corpus* to pro-
duce the Infant. If the Infant is produced, he will be
restored to the father; if he is still withheld the Court
will resort to compulsory means to enforce obedience to
the Writ.

If the Infant becomes the master of a family
by marriage, or if he enters into the service of the
State as a soldier or sailor, and by so doing subjects
himself to an authority paramount to that of the father,
the Infant is emancipated or enfranchised and the

INFANTE.

It is a general rule that no contract made during Infancy is binding after the Infant attains twenty-one. If, however, there were no exceptions to this rule, it would be a prejudice rather than a protection to him. For what tradesman would supply him with food and clothing if there was no legal mode of enforcing payment? Accordingly he is permitted to bind himself by a contract for such things as are necessary and suitable to his rank and fortune. It is for the Jury to say what is necessary and suitable. Although Infancy is a good defence against all other demands, yet if the Infant after he has come of age, of his own free will without threats or compulsion, promise to pay, he will render himself liable. The promise, however, must be in writing, and signed by the Infant. Conveyances, purchases, and leases of land made during Infancy, may be set aside or confirmed by the Infant at his pleasure when he comes of age. The Will of an Infant is absolutely void as to his real property, but as to personal property it is valid if the Infant, being a girl, was more than twelve years old, or, being a boy, was more than fourteen at the time when it was made. An Infant under seven years of age cannot be guilty of felony; after seven there is a period which extends in girls to twelve in boys to fourteen, during which express proof of felonious intent must be given, or the Infant will be acquitted: after these ages of twelve and fourteen, Infants accused of felony have no greater privilege than the rest of the community. A girl nine years old, if married, is entitled to dower out of her husband's lands, although the marriage is not binding on her at that age. She is not permitted to bind herself for better and for worse until she arrives at the maturity of twelve; the youths of the other sex, being less favoured, cannot do so till fourteen; under which age, as is but just, they are presumed incapable of committing rapes, and cannot legally be convicted of such an offence. The consent of the parent or guardian is required to the marriage of an Infant, not being a widower or widow. An Infant cannot be an administrator, but at seventeen he may be appointed executor. Full age is completed on the day preceding the anniversary of a person's birth; for in Law there is no fraction of a day. Custom in some places creates certain special variations in the general Law of Infancy. Bingham, *Law of Infancy and Coverture*.

The title INFANTE is given by the Spaniards to all the King's sons, the eldest of whom is otherwise termed *el Principe*; as INFANTA likewise to all the daughters, the eldest being *la Princesa*. Du Cange has explained the origin of this title from Vitalis, Bishop of Osca; if, indeed, the words of the good Prelate can be considered as throwing any light on the matter. *Regum filii dum sunt in Infantiâ vel pueritiâ constituti, non Reges, sed Infantes, consueverunt, et præcipue in Hispaniâ, appellari. Ex quo contingit, quod qui ex Rege genitus ad talem statum, deficiente sibi regno, non valeat pervenire quod Rex dici valeat cum effectu, in eâ nuncupatione remaneat, quantumcumque processerit in ætate, quam a principio est sortitus. Unde contingit quod tales, qui regnum natione originis promerentur, regnum tamen nequeunt adipisci, Infantes quamdiu Reges non fuerint, appellantur.* Du Cange remarks, that the common opinion is erroneous, which attributes the first assignment

of the title Infante to Sancho, son of Ferdinand II. King of Castile and Leon; and he cites its usage in an Epistle of Pelagius, Bishop of Oviedo, as early as A.D. 1100.

Milton. *Works*, vol. i. fol. 133. *An Apology for Smectymachus*

But yet the pardon works so feelingly,
That to the king that very night came in
Sir Andrew Trollop, with some company;
Contented to redeem his sin with sin,
Disloyalty with *infidelity*.

Daniel. *History of Civil Wars*, book vii

On her white breast a sparkling cross she wore,
Which Jews might kiss, and *infidels* adore.

Pope. *The Rape of the Lock*, can. 2.

I have had, in twenty years' experience, enough of the uncertainty of princes, the caprices of fortune, the corruption of ministers, the violence of factions, the unsteadiness of counsels, and the *infidelity* of friends.

Sir Wm. Temple. *Works*, vol. ii. p. 568. *Memoirs from the Peace in 1697 to the Author's Retirement*.

I have often asked myself, what I had to do, to invent new arguments for religion, when the old ones had outlived so many generations of this race of *infidels* and freethinkers?

Warburton. *Works*, vol. iv. p. 79. *The Divine Legation*, book iv. sec. 2.

Some parts of which having been accidentally and obscurely seen by the owl-light of *infidelity*, were imagined by such as Toland, Blount, and Coward (as is natural for objects thus seen by false braves) to wear strange gigantic forms of terror: and with these they have endeavoured to disturb the settled piety of sober Christians.

INFINITE, adj.

INFINITE, n.

INFINITELY,

INFINITENESS,

INFINITUDE,

INFINITY,

INFINE'SIMAL,

INFINITIVE.

Fr. *infini*; It. and Sp. *infinito*; Lat. *infinitus*, in, privative, and *finitus*, from *finire*, to end. See FINE. The noun *finis* (Scaliger says) is from *fio*. *Sanè finis est cujus gratia ali-quid fit*. And Vossius, *Cum (res) fit, quâ intenditur, finis vocatur*.

Without end, without bound, or limit, or termination; endless, boundless, illimitable; countless, measureless, immense. Used hyperbolically, when large, great, very large or very great, are intended.

Infinite ben the sorwes and the teres
Of olde folk, and folk of tendre yeres,
In all the toun for death of this Theban:
For hem ther wepeth bothe childe and man.

Chaucer. *The Knightes Tale*, v. 2829.

INFINITE. Then thilke thyng that suffereth temporall condicion, all though that it neuer began to be, ne though it neuer cease to be (as Aristoteles demed of y^e world) and although the life of it be stretched with infinite of tyme, yet Algates nis it no soch thyng, as men might not trowe by right that it is eterne.

Chaucer. Works, fol. 243. Boecius, book v.

For as synne and godly life farre differ one from another, so are theyr fruites quite contrary, and the fruites of godly lyfe, infinitely more excellent.

Udall. Romaines, ch. vi.

One whose eternity passeth al time, and whose infinity passeth all nombre, that is almighty.

Sir Thomas More. Workes, fol. 636. The Second Part of the Confutation of Tyndall.

For which, her vertues shall extend applause
Beyond the circles fraile mortality draws;
The deathlesse in this vale of death comprising,
Her praise, in numbers, into infinites rising.

Chapman. Homer. Odyssey, book xxiv. fol. 366.

There were few weeks, but some the channel cross'd
With sundry presents of a wond'rous price,
Some jewel that him infinitely cost,
Or some rich robe of excellent device.

Drayton. The Legend of Pierce Gaveston.

We shall inwardly adore the God of heaven, when our hearts are wrought to be awfully affected to the acknowledgement, chiefly of his infinite greatness and infinite goodnesse. And this shall be best done by the consideration of the effects of both: even in meaner matters, we cannot attain to the knowledge of things by their causes, but are glad to take up with this secondary information: how much more in the highest of all causes, in whom there is nothing but transcendency and infinitenesse.

Hall. Works, vol. iii. fol. 71. The Remedy of Prophanenesse.

I know that whatsoever hath or must necessarily have limits or fines, is not, cannot be infinite, and therefore this globe [in my hand] cannot be infinite: and if I can find in any other thing a parity of reason, I do and may remove infiniteness from it as reasonably and evidently as I do from this globe I hold, or this hour I write, or this life I live.

Hale. Origin of Mankind, ch. vi. sec. 1.

And thou the third subsistence of Divine Infinitude, illumining Spirit, the joy and solace of created things.

Milton. Works, vol. i. fol. 28. Of Reformation in England.

Since her interpretations, and our deeds,
Unto a like infinity arise;
As being a science that by nature breeds
Contention, strife, and ambiguities.

Daniel. To Sir Thomas Egerton, Knight, &c.

That which is called the infinitive mode, should according to the true analogy of that speech be stiled a participle substantive.

Wilkins. Real Characters, fol. 445.

Infinite knowledge is the foundation of all. Infinite goodness is the author and mover of all. Infinite wisdom is the contriver and director of all; and infinite power executes all.

Sharpe. Works, vol. i. p. 327. Sermon 13.

These hits of words a true poet often finds as I may say without seeking; but he knows their value when he finds them, and is infinitely pleased.

Dryden. A Parallel of Poetry and Painting.

If we consider the quality of the person appearing, that he was no other than the eternal Son of God; how ought we to be wrapt with wonder and astonishment, at the infiniteness of the divine condescension.

Sharpe. Works, vol. i. p. 275. Sermon 11.

Infinites are composed of finites, in no other sense, than as finites are composed of infinitesimals.

Clarke and Leibnitz's Papers. Dr. Clarke's Fourth Reply.

Such wide and undetermined prospects are as pleasing to the fancy, as speculations of eternity or infinitude are to the understanding.

Spectator, No. 412.

Whatever is finite, as finite, will admit of no comparative relation with infinity; for whatever is less than infinite, is still infinitely distant from infinity, and lower than infinite distance the lowest or least cannot sink.

Brookes. Universal Beauty, book iv. note to v. 219.

External objects impressed on the senses, occasion first in the nerves on which they are impressed, and then in the brain, vibrations of the small, and, as one may say, infinitesimal medullary particles.

Hartley. Observations on Man, part i. prop. 4.

There is one mistake however, from which the prefix TO ought to have rescued them: they should not have repeated the error, of insisting that the infinitive was a mere noun: since it was found necessary in English to add another word (viz.) TO, merely to distinguish the infinitive from the noun, after the infinitive had lost that distinguishing termination which it had formerly.

Tooke. Diversions of Purley, vol. i. p. 353. Of Prepositions.

This Kynge Rycharde perceyued that the Chrysten people decresyd in the Holy Lande, as well by infyrmytes as lacke of vytell.

R. Brunne, p. 200, note.

Who is syk and I am not syk? who is sclaudrid, and I am not brent? if it bihoueth to glorie, I shal glorie in tho thingis that ben of myn ynfyrmyte.

Wiclif. 2 Corinthians, ch. xi.

Who is sicke, and I am not sicke? who is hurt in y^e fayth and my hert burneth not? If I must nedes rejoyce, I wyll reioyce of myne infirmities.

Bible, Anno 1551.

Presently after the deluge, when the same had destroyed or infirmed the nature of vegetables, by an expression of enlargement, it is again delivered: Every moving thing that liveth, shall be meat for you, even as the green herb, have I given you all things.

Sir Thomas Brown. Vulgar Errours, book iii. ch. xxv.

Yet because it hath the outside of a specious reason, and specious things we know are aptest to work with human lightness and frailty even against the solidest truth that sounds not plausibly, let us think it worth the examining for the love of infirmer Christians.

Milton. Works, vol. i. fol. 50. The Reason of Church Government.

Which gallery and cells, being in all 40, (many more than we needed,) were instituted as an infirmary for sick persons.

Bacon. New Atlantis, p. 5.

He wist not how him to despoile of life,

Ne how to win the wished victory,

Sith him he saw still stronger growe through strife,

And himselfe weaker through infirmity.

Spenser. Faerie Queene, book iii. can. 7.

The present elector is old and infirm, and has, for some years past, deceived the world by living so long.

Sir Wm. Temple. Works, vol. ii. p. 562. Memoirs from the Peace, 1679.

But some domestic reasons prevailed with the cardinal; besides his age and great infirmities, which ended his life not long after the peace was made.

Id. Ib. vol. ii. p. 565.

The infirmary where the sick lay was paved with various colour'd marbles, and the walls hung with noble pieces; the beds are very faire.

Evelyn. Memoirs, vol. i. p. 132. Rome 1645, January.

But for my own part, being truly conscious to myself of my infirmity, and believing that what I discourse at this time of the ministry of the holy angels, I deliver in the presence of some of those heavenly ministers, I shall be very careful to keep myself within bounds of modesty and sobriety.

Bishop Bull. Works, vol. i. p. 304. Sermon 12.

[I thought it requisite] to set down some experiments which by the help of the reflections and insinuations that attend them, may assist you to discover the infirmness and insufficiency of the common peripatetick doctrine (about colour.)

Boyle. Works, vol. i. p. 695. Of Colours.

Vehement passion does not always indicate an infirm judgment. It often accompanies, and actuates. and is even auxiliary to a powerful understanding.

Jortin. Remarks on Ecclesiastical History, vol. ii. p. 79.

INFORMATION, in *Law*, is one of the modes by which a
person charged with a misdemeanour, is prosecuted and
brought to punishment for his offence. It resembles an
Indictment in many respects, and may be defined, the
written accusation of one or more persons of a misde-
meanour, filed either by the King's Coroner or the Attor-
ney-General in the Crown Office. The King's Coroner
is frequently called the Clerk, and frequently the Master

INFOR-
TUNE.

of the Crown Office. It appears from the definition that an Information differs from an Indictment only in two respects; 1st, it does not extend to such crimes as Treason or Felony; 2dly, it is never brought before or found by a Grand Jury. The filing by either of the officers mentioned above supplies the place of the finding by the Grand Jury. The form of an Information is that *the Coroner of our Lord the King presents*; of an Indictment, that *the Jurors of our Lord the King upon their oaths present*; but with this small formal variation, the presentment or statement of the offence is precisely the same in both.

The Attorney General may file an Information against any one at his own discretion, but he rarely or never does so, unless the offence be of a very grave nature, and calculated to disturb the Government, so that an immediate prosecution is desirable. These are usually called *ex officio* Informations. The King's Coroner files his Information upon the application of private persons; but by Statute 4 and 5 William and Mary, c. 18. he must first have the express permission of the Court of King's Bench. The Court will grant its permission for any flagrant misdemeanours, such as riots, batteries, gross immoralities, and libels. In cases of libel, the Court, previous to granting permission, requires the applicant to swear positively that the libel is false. This practice frequently induces the innocent object of a libel to proceed by Information rather than by Indictment or Civil action, because he will be enabled by so doing to clear his character from the imputations cast upon it by his own oath, an advantage which he cannot otherwise obtain. An opportunity is always given to the offending party to show cause why the permission should not be granted. When granted, the Information is drawn up and filed in the Crown Office; the Sheriff is then commanded to summon the party accused to appear in Court on a certain day; on his appearance the Petit Jury is sworn, and he is put upon his trial. If a magistrate acts illegally in his office through corrupt motives, the Court will grant an Information against him, but if he intends to act honestly, and merely mistakes his duty, the application is invariably refused. Informations by the King's Coroner are usually called *Criminal Informations*.

When a Statute gives a penalty in part to the King and in part to the Informer, the latter *qui tam pro domino rege, quam pro seipso sequitur*, may proceed by Information, which is then called a *Qui Tam* Information.

During a period of more than 150 years, commencing in the reign of Henry VII., Informations were constantly prosecuted in the Star Chamber, the members of which were the sole judges of the law, the fact, and the penalty. They were turned to a still more infamous purpose by Statute 11 Henry VII. c. 3., which permitted them to be brought by any Informer upon any penal Statute, not extending to life and limb. Dudley and Empson signalized themselves by the oppressive use which they made of this Statute, to the disgust of the whole nation, except of Henry himself, whose treasury was enriched by the frequent fines exacted. By these means the subject was constantly put on his trial, without the sanction of a Grand Jury. This Statute was repealed in the reign of Henry VIII., and the Star Chamber was abolished in the 16th year of Charles I. In the times immediately preceding the Revolution of 1688, Informations by the

King's Coroner were used for purposes of oppression. This produced the Statute 4 and 5 William and Mary mentioned above. Since which time they have remained on the same footing.

INFRIGIDA'TION. } Lat. *frigidus*, from *frig-ere*, to
chill or be cold.

To chill or cool. It is not an uncommon word in Boyle.

Whose coldness as it seems did not *infridigate* those upper parts of the glass, to whose level the liquor itself did not reach.

Boyle. Works, vol. i. p. 393. The History of Fluidity.

Whether, because of some little rarefaction of the air included in the sealing or because of the *infrigidation* of that air by the snow, or for both these reasons, or any other, I shall not now dispute.

Id. Ib. vol. ii. p. 513. The Experimental History of Cold, tit. 2.

INFRI'NGE, } Fr. *enfraindre*; It. *infringere*;
INFRI'NGEMENT, } Lat. *infringere*; to break into, (in,
INFRI'NGER. } and *frangere*, to break.) Met.

IN-
FRINGE.
—
INFU-
RIATE.

To break into or through, to violate the wholeness, or entireness, or integrity; to violate, to transgress; to break down, to destroy.

Cyneas therefore when he had brought word howe the peace with the Romans was *infringed* by Appius Claudius, being demaunded of Pyrrhus what maner of thing Rome was, he answered, that it seemed to him to be a city of kinges.

Arthur Goldyng. *Justine*, fol. 86.

Kyng Henry, contrary to his othe, honor and agreement, had violated and *infringed* the order taken and enacted in the last parliament.

Hall. *Henry VI. The thirty-ninth Yere.*

Who would be seen t' abide
Unfaithful to his vows; t' *infringe* the band
Of a most sacred knot which God hath ty'd?

Daniel. *A Panegyric to the King's Majesty.*

We
Must bide the stroak of that long-threatn'd wound,
(At least if so we can, and by the head
Broken be not intended all our power
To be *infring'd*, our freedom and our being,
In this faire empire won of earth and air.)

Milton. *Paradise Regained*, book i. l. 62.

We promise that such a course shall be taken with him, as may sufficiently testify that we no less heinously brook the violation of your right, than the *infringement* of our own authority.

Id. *Works*, vol. ii. fol. 173. *Letters of State.*

See ready Pallas waits thy high commands,
To raise in arms the Greek and Phrygian bands;
Their sudden friendship by her arts may cease,
And the proud Trojans first *infringe* the peace.

Pope. *Homer. Iliad*, book iv.

And to see the *infringers* of this commandment to be imprisoned, he gave charge to all justices, maiors, sheriffs, bailiffs, and constables.

Styke. *Memorials. Edward VI. Anno 1548.*

We scarce ever had a prince, who by fraud, or violence, had not made some *infringement* on the constitution.

Burke. *Works*, vol. i. p. 61. *A Vindication of Natural Society.*

The criminals destined to eternal punishment, in this division, are the *infringers* of the duties of imperfect obligation, which civil laws cannot reach: such as those without natural affection to brothers, duty to parents, protection to clients, or charity to the poor.

Warburton. *Works*, vol. ii. p. 138. *The Divine Legation*, book ii. sec. 4.

INFUNERAL, *in*, and funeral, *q. v.*

To perform the rite or ceremony of burial or sepulture.

As though her flesh did but *infuneral*
Her buried ghost.

G. Fletcher. *Christ's Victory and Triumph.*

INFURIATE, *v.* } See FURY, *ante.* It. *infuri-*
INFURIATE. } *are*, to fill with fury.

To cause to be, to make, *furious*, or raving, to madden, to provoke or urge to madness, to outrageousness.

Dilated and *infuriate* shall send forth.

Milton. *Paradise Lost*, book vi. l. 486.

Much yet remains unsung: the rage intense
Of brazen-vaulted skies, of iron fields,
Where drought and famine starve the blasted year:
Fir'd by the torch of noon to tenfold rage,
Th' *infuriate* hill forth shoots the pillar'd flame.

Thomson. *Summer.*

Not so the steady tyrant man,
Who with the thoughtless insolence of power
Inflam'd, beyond the most *infuriate* wrath
Of the worst monster that e'er roamed the waste,
For sport alone pursues the cruel chase,
Amid the beamings of the gentle days.

Id. *Autumn.*

They tore the reputation of the clergy to pieces by their *infuriated* declamations and invectives, before they lacerated their bodies by their massacres.

Burke. *Works*, vol. viii. p. 238. *On a Regicide Peace.*

A mine with deadly stores
Infuriate, burst; and a whole squadron'd host
Whirl'd through the riven air.

Thompson. (*W. Dean of Raphoe.*) *Sickness*, book v.

INFUSE, *v.*
INFUSE, *n.*
INFUSER,
INFUSIBLE,
INFUSION.

Fr. *infuser*; It. *infondere*; Sp. *INFUSE*
infundir; Lat. *infundere, infusum*,
to pour into, (*in*, and *fundere*, to
pour.)

To pour into; lit. and met.—lit.
to mix by pouring, instilling, steeping, or soaking; to
instil, to steep; met. to inspire, to insinuate.

Infusible, (*in*, privative,) that cannot be poured; cannot be reduced to a state to be poured.

Hammond uses *infusible* positively; that can be infused or poured into, or instilled.

Wrathfulness is voyded out, and gentleness and meekness is instilled therof *infused*.

Udall. *Luke. Preface.*

These be Cyprianus wordes and then folowe thies, As in the person of Christ the humanite was seen & the diuinite hiddē, euen so the diuinite ineffably *infused* itselfe into the visible sacrament.

Stephen, Bishop of Wynchester. *An Explicatio of the true Catholique Fayth*, fol. 127.

Of which thynges this *infusion* of water is one, taught undoubtedly by God to hys Apostles.

Sir Thomas More. *Workes*, fol. 491. *The second Part of the Confutation of Tyndall.*

Disguysed in cloud obscure the same dame Venus thyther brings,
And into water vessels bright it secretly she flinges
And makes therof *infusion* large, the vertue forth to take.

Phaer. *Aeneidos*, book xii. sig. M. iii.

God in the working of such clensing of the soule, and *infusion* of grace, vseth the sacramentes not as a bare sign but as an instrument with whiche and by whiche it pleseth hym to worke thē.

Sir Thomas More. *Workes*, fol. 386. *The second Part of the Confutation of Tyndall.*

This said, a fresh *infus'd* desire of fame

Enters their warmed blood, with such a will,

That they deem'd long they were not at the game.

Daniel. *History of Civil Wars*, book vi.

Yet, O most blessed Spirit, pure lampe of light,

Eternall spring of grace and wisdom true,

Vouchsafe to shed into my barren spright,

Some little drop of thy celestial dew,

That may my rymes with sweet *infuse* embrew.

Spenser. *Hymnes. An Hymne of heauenly Love.*

It was a strange exaction of Nebuchadnezzar upon his magi, to declare to him not onely the meaning, but the very dream, as if they had been the *infusers* of it.

Mountague. *Devoute Essayes, Treat. 16. sec. 6.*

Vitrification is the last work of fire, and a *fusion* of the salt and earth; which are fixed elements of the composition; wherein the *fusible* salt draws the earth and *infusible* part into one continuum.

Sir Thomas Brown. *Vulgar Errours*, book ii. ch. i.

And all that els was wont to worke delight

Through the diuine *infusion* of their skill.

Spenser. *The Teares of the Muses.*

So Phœbus, or some friendly Muse,

Into small poets song *infuse*,

Which they at second-hand reherse,

Through reed or bagpipe, verse for verse.

Butler. *Hudibras*, part i. can. 1.

But no sooner grows

The soft *infusion* prevalent and wide,

Than, all alive, at once their joy o'erflows

In music unconfin'd.

Thomson. *Spring.*

Still let my song a nobler note assume,

And sing th' *infusive* force of Spring on Man;

When Heaven and Earth, as if contending, vie

To raise his being, and serene his soul.

Id. *Id.*

I feel desires,

That give assurance of their own success,

And that, *infus'd* from heav'n, must thither tend.

Cowper. *The Task*, book v.

The priests, when they baptize, shall not only pour water on the head of the children but shall plunge them into the laver. This shows that baptism by *infusion* began to be introduced in cold climates.

DER.

INGA, in *Botany*, a genus of the class *Polygamia*, order *Monoecia*. Generic character: hermaphrodite flower, calyx five-toothed; corolla tubular, five-toothed; stamens numerous, united; pod one-celled; seeds involved in a pulp: male flower, calyx five-toothed; corolla tubular, five-toothed; stamens numerous, united.

One species, *I. dulcis*, the Sappan fruit, native of the East Indies.

INGAGE, usually written *Engage*, *q. v.*; to bind or pledge, *sc.* to certain fulfilments; to bind, to attach.

They would have thought the best way had been for Christ himself to have appeared as a mighty temporal prince, which would have presently *ingaged* the whole Jewish nation to him, and they to have sent his ambassadours to the several princes and governors of the world at their own peril, to submit to his authority.

Stillfleet. Sermon 12. vol. iii. p. 451.

INGANNATION, Fr. *enganer*; It. *ingannare*; Sp. *enganar*, to deceive. See the French and Italian Etymologies of Menage.

Deception.

Whereunto whosoever shall resign their reasons, either from the root of deceit in themselves, or inability to resist such trivial *ingannations* from others, although their condition and fortunes may place them many spheres above the multitude; yet are they still within the line of vulgarity and democratical enemies of truth.

Sir Thomas Brown. Vulgar Errors, book i. ch. iii.

INGATE, *in*, and *gate*, *q. v.* the way *gaed* or *gade*, *gane* or *gone*.

The way gone in or into; the passage in, the entrance.

Th' one forward looking, th' other backward bent,

Therein resembling Janus auncient,

Which had in charge the *ingate* of the yere.

Spenser. Faerie Queene, book iv. can. 10.

But like as at the *ingate* of their berth,
They, crying, creepe out of their mother's wombe;
So wailing, backe goe to their wofull tombe.

Id. The Ruines of Time.

INGATHERING, *in*, and *gathering*. See GATHER.

A. S. *gaderian*, *colligere*, to collect or bring together.

The bringing, drawing, or collecting in.

And y^e feast of *ingatherynge*, in the ende of the yere, whē thou haste gathered in thy laboures out of the felde.

Bible, Anno 1551. Exodus, ch. xxiii.

INGEMINATE, } *In*, and *geminare*, *q. v.*; Lat.

INGEMINATION. } *geminare*, from *geminus*, quasi *geminus*, from the ancient *geno*, (as the Gr. *γένιμος*, from *γένειν*, to beget.) Applied emphatically when *two* are brought forth at the same parturition; and thus *geminare* is, consequentially, to *double*. And *ingeminate* is,

To double, to redouble; to reiterate, to repeat.

Those threats are deeds. She yet *ingeminates*

The last of sounds, and what she hears relates.

Sandys. Ovid. Metamorphoses, book iii. fol. 50.

Now he [Jesus] began, and often did *ingeminate* those sad predictions of his unhandsome usage he should shortly find.

Taylor. The Great Exemplar, part iii. sec. 3. fol. 429.

And certainly no man that considers the weight of this scripture expression will think that the apostle, by such an instance and *ingemination*, would press so thin a meaning as this is.

Hopkins. Works, fol. 511. Sermon 14.

INGE'NDER, *v.*

INGE'NERATE, *v.*

INGE'NERATE, *adj.*

INGE'NERABLE,

INGENERABI'LITY,

INGE'NERABLY,

INGE'NDURE.

Now commonly written *Engender*, *q. v.*; *en* or *in*, and *gender*; Fr. *gendre*, from the ablative *genere*, from *gignere*; Gr. *γένειν*, to beget.

To beget, to procreate, to breed, to produce, bear or bring forth, to propagate.

Ingenerable, (*in*, privative, and *generable*; Sp. *ingenerable*; It. *ingenerabile*;) that cannot or may not be begotten, procreated, bred, or produced.

Browne writes *ingenerated*, *i. e.* (*in*, privative) *un-generated*, unbegotten.

And there by a manner of virgine *ingendrure* arne these margarites *ingendred*, & afterward congeled.

Chaucer. The Testament of Loue, book ii. fol. 306.

And I saie that ydelnesse *ingendred* great pestilence.

Golden Boke, ch. xxix. sig. N.

Placabylitie is no lyttell parte of benignitie, and is properly where a man is by any occasyon meued to be angry, and natwithstandyng eyther by his owne reason *ingenerate*, or by counsaylle perswaded, omytteth to be reuenged, and often tymes receyuethe the transgressoure, ones reconsyled, into more favour.

Sir Thomas Elyot. The Governour, book ii. ch. vi.

Whatsoever is *ingendred* and bred in the owne proper place, is evermore kindly, and reteineth it owne nature better.

Holland. Livius, fol. 993.

Xenophanes holdeth the world to be eternall, *ingenerable*, uncreated, and incorruptible.

Id. Plutarch, fol. 670. Opinions of Philosophers.

Full well he knew, that eternal it was and *ingenerable*.

Id. Ib. fol. 844. Creation of the Soul.

The second thing which this doctrine aimed at, was the establishing the incorporeity and *ingenerability* of all souls.

Cudworth. Intellectual System, book i. ch. ii. sec. 14.

As for the conceit of Anaxagoras, of *præ* and post-existent atoms, endued with all those several forms and qualities of bodies *ingenerably* and incorruptibly, it was nothing but an adulteration of the genuine atomical philosophy.

Id. Ib. book i. ch. i. sec. 29.

The weight or authority of which rests in the consideration of those means whereby this opinion or perswasion hath been *ingenerated* in mankind.

Hale. Origin of Mankind, ch. ii. sec. 3.

And all her whole creation did her shewe

Pure and vnspotted from all loathly crime,

That is *ingenerate* in fleshly slime.

Spenser. Faerie Queene, book iii. can. 6.

Such abuses, enormities, and inconveniencies might, with a little sufferance, *ingender* more evil in the public weal, then could after be redubbed with much labour, study, diligence, and travail.

Strype. Memorials. Henry VIII. Anno 1538.

I must mind you, that if you will not disbelieve Helmont's relations, you must confess, that the *tria prima* are neither *ingenerable* nor incorruptible substances.

Boyle. Works, vol. i. p. 502. The Sceptical Chymist.

I would not in this place needlessly engage in the controversy about the *ingenerability*, (as they speak,) or the mutual transmutation of the bodies, that are called elementary.

Id. Ib. vol. v. p. 618. The General History of Air.

INGENHOUIA, in *Botany*, a genus of the class *Monadelphia*, order *Monogynia*, natural order *Malvaceæ*. Generic character: calyx three-parted, lobes ovate-lanceolate, pointed; corolla, petals five; the lower part of the flower pitcher shaped.

One species, *I. triloba*, native of Mexico. Decandolle.

INGENITE, It. and Sp. *ingenito*; Lat. *ingenitus*, past participle of *ingignere*, *in*, and *gignere*, Gr. *γένειν*, to beget.

Begotten in, inborn, innate.

Since their *ingenite* gravity remains,

What girder binds, what prop the frame sustains?

Blackmore. The Creation, book iv.

We must observe, that there is not only in the mind of man an *ingenit* sense of *turpe* and *honestum*, that constantly inclines him to the practice of such virtuous actions, but also a strong inclination of appetite, that, like a constant remora, stops and impedes the virtuous principle.

South. Sermons, vol. ix. p. 143.

INGE'STED, } Lat. *ingestus*, past participle of

INGE'STION. } *ingerere*, to bear or carry into.

Borne or carried into.

Daniel uses *ingeniate*, equivalent to—to contrive, to design.

Ingenuous: Fr. *ingenue*; It. and Sp. *ingenuo*; Lat. *ingenuus*, *quod ingentum, hoc est Natura insitum*; in-born, or implanted or ingrafted by Nature; *at homo ingenuus est is, qui statim ut natus est, liber est*. And, thus, *ingenuous* is,

Fitting or becoming a free-born man; free, frank, liberal, candid, fair, open, sincere.

Ingenuity: Fr. *ingénuité*; It. *ingenuità*; Sp. *ingenuidad*; Lat. *ingenuitas*; was used sometimes as equivalent to *ingeniousness*, and at others to the modern *ingenuousness*; now always to the former.

The adjectives and adverbs appear also to have been used indiscriminately.

Mr. Pegge observes that we have the term *ingenuousness* to answer the purpose of distinguishing between openness and dissimulation, "without leaving a loop to hang a doubt upon."—*Anecdotes of the English Language*, p. 261.

He was gladly seene and welcommed of the people as a man that was named very wise and *ingenious* in feats of warre.

Hakluyt. *Voyages, &c.* vol. ii. fol. 80. *The Losse of Rhodes*.

INGROSSING, or ENGROSSING, in *Law*, is a misdemeanour punishable by fine and imprisonment. The offence consists in getting into one's possession or buying up large quantities of provisions, with intent to sell them again. It is very like the offences of FORESTALLING and REGRATING; the former of which consists in buying provisions on their road to market; the latter in buying them in the market and selling them again, either in the same market or within the distance of four miles from it. The Law forbids such purchases as these, on the ground that they are supposed to enhance the price of provisions above that which is fair and reasonable. In the present state of Society in England, we may doubt whether any individual by his own *bonâ fide* purchases, without spreading abroad false rumours and reports, can injure the Public, although the purchases were made with the intent to sell again. If he cannot do so, the reason for considering Ingrossing as an offence has passed away.

Ingrossing does not partake of the nature of a monopoly in the legal sense of that word. A monopoly is an exclusive privilege granted by the King to a subject for the sole buying and selling, making, working, or trading, in any article of commerce whatsoever. These monopolies were carried to an enormous extent in the reign of Elizabeth; but by a Statute passed in the reign of James I. the power of the Crown to grant them was declared illegal, with an exception in favour of the authors of new inventions, to whom a monopoly may be granted for a few years by Letters Patent, and of a few specified articles. Now it is the essential character of a monopoly, that no one, save the King's grantee, can trade in the article monopolized; whereas the article Ingrossed is open to the whole world until purchased by the Ingrosser. This distinction has been noticed, because Mr. Justice Blackstone, in his *Commentaries*, has placed monopoly next after Ingrossing, and said that they are much the same kind of offences; and the high authority of the learned Commentator may thus throw an odium on Ingrossing which it does not deserve. In an indictment for Ingrossing it is necessary to state the quantity Ingrossed; an indictment for Ingrossing a great quantity of fish, geese, and ducks was quashed, because no particular quantity of fish, geese, and ducks was stated.

Ingrossers in Law French are those *qui achetent en gros*. Spelman has visited them heavily. *In specie, et sic vulgo notior, multoque execrator is est (Ingrossator) qui crescentes segetes aut rem annonariam Statutis non permissam, similiter congerit et accumulatur. Hanc Reipublicæ erucam assidue aucupantur Informatores; corvi corvum, lupi lupum.*

See also Girdler, *Observations on the pernicious Consequences of Forestalling, Regrating, and Engrossing, with a List of the Statutes, &c. which have been adopted for the Punishment of those Offences*, 1800.

Of the Ingrosser, or writer of Legal Instruments *qui forensi caractere acta et instrumenta forensia paginis inscribit membranis*, Spelman observes that the Officer of the Exchequer who has the care of the Great Roll, now called *Clerk of the Pipe*, in the time of Henry VI. was known as *Ingrossator magnæ Rotulæ*, and the *Pipæ contrarotulator*, whom, in modern diction, we suppose to be *Secondary* to the Clerk, as *Duplex Ingrossator*.

INHERIT. While property continued only for life, testaments were useless and unknown; and, when it became *inheritable*, the *inheritance* was long indefeasible, and the children or heirs at law were incapable of exclusion by will.

Blackstone. Commentaries, book ii. ch. i.

INHERITANCE, in *Law*, is an estate in lands or tenements, which on the death of the owner may descend to his *heirs*. Property which may be moved to any place and enjoyed anywhere, such as household goods, can never be the subject matter of an Inheritance; that is can never descend to the heir: but on the death of the owner such property passes into the hands of his executor or administrator; as also do leaseholds for years; for whatever number of years they may be. Inheritable properties, which are tangible and visible, such as houses and lands, are called *corporeal hereditaments*. Those which are invisible, and the ownership of which confers rather a right connected with land, than property in the land itself, such as advowsons, tithes, rights of common, rights of way, and many others, are called *incorporeal*. When an estate is conveyed to a man and his heirs, he is said to have a fee simple; which is the largest and the most complete interest known to our law, being subject to the absolute control of the owner, who may mortgage it or otherwise charge and encumber it; and may alien it by Deed or Will to any one capable of receiving it. In default of his so doing it descends to his heirs general, and upon failure of heirs general it escheats to the lord of whom it is holden. If an estate is conveyed to a man, and the heirs of his body, he is said to have a fee tail, which so long as the entail is not barred or docked can neither be aliened nor encumbered by the owner; but on his death it descends to the heirs of his body; that is to his lineal descendants; and in default of such descendants, it reverts to the owner of the fee simple. For the fee tail, like a lease for years, is only a portion carved out of the complete interest, the residue of which belongs to the reversioner; when the years expire, and when the heirs in tail fail, the reversioner steps into possession. The owner of a fee tail may, however, at any time, by going through an expensive legal process, called suffering a recovery, dock the entail, defeat the heirs in tail and the reversioner, and convert his own estate into a fee simple. When the immediate possessor cannot bar the entail, without the concurrence of his son, or of some other person who is to succeed him, such immediate possessor is only tenant for life, and his son or other successor has an estate tail, expectant on the determination of the immediate possessor's estate for life.

The laws which regulate the descent of real property are of very remote antiquity. It seems probable, however, that they were different before the Conquest, because in Kent, where the most successful stand was made against Norman in behalf of Saxon institutions, the custom of *GAVELKIND* prevails to this day, by which custom land descends to all the sons equally, and not to the eldest son alone. Except, however, in Gavelkind, copyhold, and other customary tenures, one uniform law has continued to regulate the descent of real property, since the time of the early Norman Kings. By this law males and the issue of males are always preferred as heirs to females and the issue of females. Thus the land descends to a son of the deceased proprietor, or to the issue of a dead son, rather than to a daughter or her issue. Where there are more than one son, the eldest

takes the whole to the entire exclusion of the others; and if the eldest be dead, he is represented by his descendants, who take the same interest which he would have taken if living. If the eldest leave no descendants, the second son or his descendants are let in, and in like manner the third, fourth, and other sons are let in successively upon the decease of their elder brothers without issue. If there be no sons nor descendants of sons, the daughters all inherit together in equal shares, the descendants of a deceased daughter always taking the same share which she would have taken if living. If the deceased proprietor leave no lineal descendants the inheritance descends to his brothers and sisters, of the whole blood, that is, born from the same father and mother as himself. In default of such brothers and sisters of the deceased proprietor, it descends to his uncles and aunts, being his father's brothers and sisters of the whole blood, and in default of them, to his paternal great uncles and great aunts of the whole blood. And the same rules of primogeniture amongst males, equal division amongst females, preference of males to females, and representation by descendants, prevail throughout, as were explained above with reference to the descent among the sons and daughters of the deceased proprietor.

It may appear strange that an uncle or other collateral relation should inherit, although the father or mother may be living, but it is an universal rule that the lineal ancestors, that is the father, mother, grandfather, &c. can never inherit. Thus if A dies, B his uncle, and not C his father, shall be his heir; if B die, C may be his heir, although he can never inherit immediately from A. The lineal ancestors and all collateral relations of the half blood are entirely excluded from the descent. Therefore, a man may die leaving his father and mother, and a large family of half-brothers living, and yet all his lands will escheat for want of heirs. The Commissioners on the law of real property in their Report, dated May 11th, 1829, recommend that this hardship should be abolished. When in tracing upwards through males, that is from father to father, no collateral relations of the whole blood of any such successive male ancestors can be found, recourse must be had to the collateral relations of some female ancestor; and it is now the prevailing opinion that the more remote female ancestor is to be preferred for this purpose before all female ancestors of nearer degree. Thus the relations of the paternal great grandmother take before the relations of the paternal grandmother. The reason is because the pedigree is traced through a greater number of males to arrive at the great grandmother than to arrive at the grandmother. When the paternal line is entirely exhausted, recourse is then had to the maternal, and the same rules are to be observed in it as in the paternal. But if the land descended to the deceased proprietor from some relation on the father's side, no relation of the mother's side shall inherit. So if it descended from the mother's side, the father's relations are excluded. The Commissioners have recommended in the same Report that this rule should be modified.

The descent of the Crown and of the lands of the King differs in two points from other descents. 1st. Primogeniture prevails among females. 2. The half blood is not excluded. In the early reigns after the Conquest, the rules of descent were frequently disregarded. William Rufus and Henry I. excluded their elder brother Robert from the

INHERIT-
ANCE.
INHIBIT.

throne; Stephen, the son of Adela, a daughter of the Conqueror, excluded Matilda the daughter of Henry I., a son of the Conqueror; and John excluded Arthur the son of Geoffry, John's elder brother. The King and Parliament have power to alter the line of succession, which power it is high treason to dispute.

The law of primogeniture is not universal throughout the country. By the custom of *Gavelkind*, as we have before stated, all the sons, and in default of sons all the daughters, and in default of daughters all the brothers, and so forth, take in equal shares. By the custom of *Borough English*, the youngest son inherits to the entire exclusion of the rest, and various other customs prevail in different manors. Where there are no sons and more than one daughter, and a peerage descends to them, the King may by his prerogative confer the title upon any one of them at his own pleasure; and until such nomination by the King, the title is unowned, and is said to be *in abeyance*. It is a general rule that an estate of inheritance cannot be created either by Deed or Will unless the word *heirs* is made use of. The intention of an ignorant testator has frequently, we fear, been defeated by this technicality. If a man leave all his lands to A, without saying to A and his heirs, A will only take an estate for his own life, and upon his death the lands will revert to the original heirs. It is also a general rule that the use of the word *heirs* shall always create an estate of Inheritance, and we have seen that a man possessed of an estate of Inheritance can always defeat his heirs by alienating the lands. Therefore if a man leave his lands to B, and declare that he shall only have an estate for life in them without power to convey them away, and that after his death his heirs shall have them, yet in defiance of the testator's declared intention, B, owing to this technical sense attached to the word *heirs*, will take not an estate for life, but an estate of Inheritance, and will be able to defeat his heirs at his pleasure by conveying the lands away. In this latter case, therefore, the use of the word *heirs* should be cautiously avoided, and children, sons, and daughters, or issue, be adopted instead. If, however, the suggestions of the Commissioners shall be adopted, these technical pieces of injustice will not long continue part of our laws.

Burnet. History of the Reformation, Anno 1528.

INHIBITION, in *Law*, is a Writ by which an inferior is commanded by a superior Ecclesiastical authority to stay the proceedings in which it is engaged. Thus if a member of a College appeals to the Visitor, the Visitor *Inhibits* all proceedings against the appellant until the appeal is determined. When the Archbishop visits, he *Inhibits* the Bishop of the diocese; when the Bishop visits, he *Inhibits* the Archdeacon; which *Inhibitions* continue in force until the last parish is visited. If a lapse happens while the *Inhibition* is in force against the Bishop, the Archbishop must institute; institution by the Bishop would be void as his power is suspended.

Inhibition is also a branch of the prerogative of the Crown: by which a subject may be restrained from quitting the kingdom. By the Common Law every man may go out of the kingdom for the purpose of traffic, or of travel, or for any other cause which he pleases, without having first obtained the King's leave. This liberty was restricted by a Statute passed in the reign of Richard II., by which all men except peers, merchants, and soldiers, were prohibited from leaving the kingdom without license; but this Statute was repealed in the 4th year of James I., therefore any man may quit the kingdom without license, but the King still possesses, and always has possessed, independently of the Statute of Richard II., a restraining power. No license is in general required, but a positive order not to quit the kingdom must be obeyed. The King may exercise this prerogative either by a proclamation, or by the Writ *Ne exeat regno*, which is the usual process at the present day. This Writ formerly was only granted for reasons of State, when it was supposed that the person quitting the kingdom had some evil design against the King's Government; but since the latter part of the reign of James I. it has been made use of in private suits between subjects for the furtherance of justice. When a Bill has been filed in the Court of Chancery, the plaintiff may apply for this Writ, grounding his application upon an affidavit that a debt is actually due to him, and that the defendant intends to quit the Country. The debt, however, must be merely equitable and not recoverable in the Courts of Law, for if it were, the defendant might be arrested by the process of those Courts. The Writ is usually directed to the Sheriff, who arrests the defendant, and detains him till he gives security not to quit the kingdom. The amount of the debt is endorsed on the Writ that the Sheriff may know what security is required. The King may also, by his Writ of *Inhibition*, require a subject residing abroad to return to this kingdom. If the subject disobeys, his lands and goods may be seized. This prerogative of the Crown has never been exerted except for purposes of State.

TION.

restraining a person from doing some act, which appears to be against equity and conscience, and the commission of which is not punishable by the Criminal Law. There are many injuries for which, when committed, a Court of Law could not give a sufficient compensation in the shape of damages; in such cases a Court of Equity, on the equitable principle of preventing mischief, will by an Injunction restrain the party from committing the injurious act. Thus, where a nobleman who had only a life estate tore the leads from the roof of the family mansion, and was proceeding to demolish it altogether out of malice against his eldest son, the Court of Chancery, by Injunction, prevented the commission of further mischief. There are numerous cases in which an Injunction is granted. 1st, To prevent waste; as where a tenant for life or years has no right to the timber, he may be restrained from cutting it down; or where a tenant for life has a general right to the timber, he may be restrained from cutting down ornamental trees; so also the tenant of a mine may be restrained from working it in a wasteful and ruinous manner. 2dly, To prevent vexatious litigation in the Courts of Common Law; as where a man has brought several actions to recover the same estate, and has uniformly failed, he may be restrained from harassing the possessor any further. 3dly, To stay proceedings in an action actually commenced in a Court of Law, where it is against equity that the plaintiff should succeed, although the defendant has no available legal defence; as if A sues B upon a bond, and B had never received the money or other thing, which was his inducement to enter into the bond, proceedings upon the bond may be stayed. For it frequently happens that a person, in consequence of some circumstance of which judicial notice can only be taken in a Court of Equity, has an advantage in proceeding in a Court of ordinary jurisdiction, which must make that Court an instrument of injustice. There are also many cases in which the legal defence to a claim set up at Law rests either exclusively, or in a great degree, within the knowledge of the party advancing the claim, by which means that defence can only be obtained through the assistance of a Court of Equity. As it is against conscience, therefore, that the party should in the one case make any use of the advantage of which he is thus inequitably possessed, or that he should in the other proceed in the assertion of his claim without communicating the information, it has become one of the most ordinary modes of equitable jurisdiction to afford relief by Injunctions to stay proceedings at Law. 4thly, To prevent the infringement of another's copy-right; as if A reprints or pirates grossly from a book of which B has the copy-right, A may be restrained from selling the pirated edition. But immoral, irreligious, and libellous Works will receive no protection in a Court of Equity. 5thly, To prevent the infringement of another's patent, provided the subject matter of the patent be really a new invention. These are a few only out of the numberless instances in which an Injunction may be obtained. When the Court grants an Injunction, the Writ is served like any other Writ upon the defendant; but if the defendant is in Court when the Injunction is granted, he is bound to take notice of it without being actually served with the Writ. If the Defendant disobey the Injunction, he will be committed to prison for contempt of Court, where he will be detained until he either obeys or gives security for his obedience.

INIQUITY,
INIQUITOUS,

INIQUOUS.

Fr. *iniquité*; It. *iniquità*; Sp. INIQUITY.
iniquidad; Lat. *iniquitas*, in, and
equitas, from *equus*; (see EQUITY;) INISLE.
Gr. *εἰκ-ὡς*, *similis*, from *εἰκ-ειν*,
similem esse, to be similar or like, the same.

The noun is of ancient usage in our language; the adjective modern. Shaftesbury and Brown use *iniquous*.

Dissimilarity, inequality; and, consequentially, partiality, and, thence, injustice; wrong, unrighteousness, wickedness.

In our elder Dramatists *Iniquity* is one name of the Vice, the established Buffoon of the *Moralities*. His dress, employment, and fate were that of his successor the modern *Punch*. See Archdeacon Nares, *ad v.*

But right anon a thousand peple in thrast

Ink of the
Ancients.

Dioscorides.

Of the **INK** of the Ancients our earliest particular accounts are derived from Dioscorides and Pliny. The former writes as below:—*Περὶ Μέλανος. Μέλαν ὃ γράφομεν συνάγεται ἐκ λιγνύος συναγομένης ἐκ δαδίων. μίγνυται δὲ πρὸς τὴν λίτραν τῇ κόμμεως οὐγγίας τρεῖς λιγνύος. σκευάζεται δὲ καὶ ἀπὸ τῆς ῥητινῆς λιγνύος καὶ τῆς προιρημένης ζωγραφικῆς ἀσβόλης. δεῖ δὲ τῆς μὲν ἀσβόλης μίαν λαμβάνειν, κόμμεως δὲ λίτραν μίαν ἥμισυ, ταυροκόλλης οὐγγίαν μίαν ἥμισυ, χαλκάνθου οὐγγίαν μίαν ἥμισυ. ἀρμόζει δὲ εἰς τε σήπτας, καὶ πυρίκανστα καταχρίόμενον μεθ' ὕδατος παχὺ, καὶ ἐώμενον ἄχρις ἀπουλώσεως. ἀποπίπτει γὰρ αὐτόματον ὑγιασθέντων τῶν ἔλκων.* (v. ult.)

Celsus.

Celsus, before this, like Dioscorides, had recommended Ink for medical purposes, although he does not describe its composition. *Atramentum sepiarum*, he says, is a laxative. *Atramentum sutorium*, quod *Græci χάλκανθον appellant*, (and which Dr. Milligan, in his translation of the Roman Physician, interprets a solution of sulphate of copper,) is a styptic. (v. 1.) This latter mixture also, in conformity with the above statement, incrusts ulcers. (vi. 2.)

Pliny

Pliny teaches as follows:—"Painters' blacke (called in Latin *Atramentum*) I count an artificial colour, although I know there is a vitrioll or coperose going under that name, which is minerall, and is engendred two manner of waies; for either it issueth and ooseth out of the mine in manner of a salt humor or liquor; or els there groweth an earth itselfe of a brimstone colour, which serveth for it, that it may be drawne out thereof. Some Painters have been knowne, who, for to get black, have searched into sepulchres for the coles there, among the reliques and ashes of the dead. But in mine opinion, all these be but new devises, and foolish irregular toils without any reason; for a man need seek no farther but to soot, and that many waies, by burning either of rosin or pitch; in which regard, many have built places and forges of purpose to burne them in, without any emissaries, tunnels, or holes, that the said smoke or soot may not get forth. But the best black in that manner made, commeth of the smoke of torchwood. This fine soot is sophisticat with the grosse soot that doth gather and engender in forges, furnaces, and stoups; and this is that Inke wherewith we use to write our books. Some there be who take the lees or dregs of wine, and when it is dried, boile it throughly; and they affirme, that if the wine were good whereof those lees came, the said inke or black will make a colour like Indico. And in truth, Polygnotus and Mycon (two as renowned Painters as ever were) used no other blacke at all, but that which they made of the marre or refuse of grapes after they be pressed; and

this they call Tryginon. Apelles devised a way by himselfe, to make it of yvorie, or the elephant's tooth burnt, and this they named thereupon Elephantum. As touching the black called Indicum, it is brought out of India: but as yet I know not the manner either of the making or the engendring of it. A kind thereof I see the diers do make of that blacke florey which sticketh to their coppers. Also, there is a black made of torchwood burnt, and the coles that come of it pumied to powder in a mortar. And here commeth to my mind the wonderfull nature of the cuttle-fishes, which do yield a black humor from them like unto Inke; howbeit, I do not find that Painters or writers make any use thereof. But all blacks whatsoever take their perfection by sunning: if it be writing Inke, with gum (arabick); if to colour pargetting or walls, with glew among; and looke what blacke is dissolved and liquefied in vinegre, the same will hold well, and hardly be washed off. And thus much of the ordinarie colours low-prized." (Holland, xxxv. 6. Hardouin, 25.)

A substitute for Ink was obtained by the Africans from the dark fluid which the *Sepia* or cuttle-fish possesses the power of ejecting, in order to conceal its retreat when alarmed by an enemy. Vossius has noticed it in the following passage. *Præstat sepia excremento suo quod Græci μέλαν, Latini atramentum vocant. Nam licet Romani et Græci ex fornacium balnearumque fuligine atramentum facerent, ut cognoscere est ex Plinio (xxxv. 5.) et Dioscoride. (v. ult.) Afri tamen ex excremento, sive nigro et glutinoso humore in vesicâ sive membranâ Sepiæ latente (Græci humorem eum θολὸν nuncupant ἀπὸ τῆς θολοῦσθαι) atramentum scriptorium faciebant. (de Idololatriâ, iv. 49.)* The same writer, in his *Tract de Arte Grammat.* (1. 39.) expresses himself much to the same purpose; and in the end, having arrived at *Encaustum*, he proceeds to the etymologies which we have given above. *Ab Encausti voce est quod Poloni colorem quo scribitur etiam atrum, per συνεκδοχὴν generis appellant incaust, ut Itali inchiostro. Volunt et inde esse Belgarum inket. Verum hos censeo inct dicere κατ' ἀφαίρεσιν pro tinct, quasi tincta vel tinctura, quia penna in eo tingitur. Nec alius originis Anglicum Inke.*

Persius, when describing the neglected writing-apparatus of the indolent student, uses *sepia* for Ink; but the commentators are not at all satisfied that the Poet knew his own meaning.

*Tum queritur, crassus calamo quoddam pendeat humor,
Nigra quoddam infusâ vanescit sepia lymphâ.* (iii. 12.)

This, says the old Scholiast, is a metonymy; for the Africans were the only folks who employed cuttle-juice for Ink. In spite of this assurance we are much inclined to take Persius at his word, and to believe that the Romans used it also. Pliny has acquainted us with one very marvellous property of this secretion. "The blacke liquour resembling Inke, which is found in the cuttle-fish, is of that force, that if it be put to the oile of a lampe burning (Anaxilaus saith) it will drown and put out the former cleare light, and make all those in the roome to looke like blackamores or Æthiopians." (Holland, xxxii. 10. Hardouin, 52.) Sextus Empiricus asserts the same wonder. (*Pyrrh. Hypotyp.* i. 14.)

In the MSS. at Portici the letters are blacker than the papyri, although these last are completely charred. This would not have been the case if vitriol had been used in the composition of the Ink, for exposure to violent heat would in that case have given it a yellow hue. Moreover the corrosive quality of vitriol would

INK. have penetrated the material written upon, as is frequently observed in later MSS. written on parchment, a far less delicate substance than papyrus. But the Greek and Roman Ink had little fluidity, and must be considered as a paint. Thus on close inspection, and if held horizontally, the MSS. of which we speak present the letters in relief, much as they might now be formed by Chinese Ink. This opinion is completely proved by a small quantity of *Atramentum*, discovered in an Inkstand at Herculaneum, which was no other than a rich oil. The materials were prepared in the same manner as those still used by Painters; and by remembering this fact we arrive at the full meaning of a passage in the Speech of Demosthenes *de Coronâ*, wherein he taunts his great rival *Æschines* for having been compelled in his youth, through poverty, to sweep the Schools and sponge their benches: nay, he adds, he has been seen τὸ μέλαν τρίβων, *grinding Ink*. This species of Ink continued in use at least as late as the VIIIth century, for Isidorus of Seville (xix. 17.) has borrowed very closely the description which we have already given from Pliny.

Minium. Coloured Inks are of ancient invention. *Minium* (vermilion) was used by the Romans for decorating the titles of MSS. Of the cinnabar and purple, the materials which composed the *sacrum encaustum* of the Emperors of the East, it is not easy to speak with accuracy. Leo the Great, the first who formally promulgated the right of exclusive purple signature, (the custom itself probably was much older than his time,) purposely raised barriers round this Imperial secret. No pen but that of the despot himself might be dipped in the mysterious Liquid. To use it, to possess it, to endeavour to obtain it from the vigilant officers under whose custody it was preserved, were all offences alike punishable by death; and we must be content to learn from the Emperor's own law, (*Leg. 6. C. de diversis Rescript.*) which ordains that the Imperial Rescripts should not be signed with any other Ink, that it was made *cocti muricis tritique conchyliæ ardore*. However much the mode of signature might vary under the successors of Leo, the *encaustum* was used by them all from the issue of this Rescript, A. D. 470, till the final overthrow of the Greek Empire. In the XIIth century the privilege of a similar signature was communicated to the members of the Imperial Family, and in some cases to the great Officers of State.

Other coloured Inks. Golden and silver Inks are not uncommon in Mediæval MSS. and many Anglo-Saxon Charters are decorated by them. Green Ink, though rarely used in Charters, frequently occurs in Latin MSS., and the Guardians of the Greek Emperors, while their wards were in minority, reserved it for their own signatures. Blue Ink, it is said, never appears singly, though occasionally intermixed with red; and yellow Ink, which has been disused for more than 600 years, perhaps was laid aside from its speedy evanescence. The characters, whenever they are found, are nearly effaced.

Booke of Secrets. A little volume printed by Adam Islip in 1596, displays much science concerning Ink. It is entitled *A Booke of Secrets: shewing divers waies to make and prepare all sorts of Inke and colours: as blacke, white, blew, greene, red, yellow, and other colours, also to write with gold and silver, or any kind of mettell out of the pen, &c.* Written first in Italian, and now newly translated into English by W. P. This volume commences with a rule, which though here confined to Ink in par-

icular, nevertheless seems quite as applicable to all Chemical preparations, as Mrs. Glasse's celebrated aphorism of "first catch your fish" is to those of the kitchen. "It is first to be understood that if you will make a great quantitie of Inke together you must encrease the waight and measure, according to the proportion you meane to make." The ingredients recommended for Ink are water, wine, vinegar, galls, and vitriol; and are compounded in different proportions in various receipts. One teaches us "to make Inke upon a suddaine to serve in an extremitie. Take a wax candle and light it, hold it under a cleane bason or a candlesticke, till the smoke of the candle hangeth thereon, then put a little warme gum water into it which tempered together will be good Inke." Another instructs how "to keepe Inke that it sinketh not into the paper, neither that it come not off, and that moths nor mice hurt not the paper. Take the shels of hazell nuts, and put them into the Inke, and it will not sinke through the paper. And that it may not come off put a little salt in it. To keepe that neither mice nor (moths) eat or fret the paper, put a little wormwood water into the Inke." Among other matters we are afterwards told how to make *Auripigmentum*, *Aurum Musicum*, and *Argentum Musicum*.

But the fullest History of Inks is contained in a volume written by Petrus Caniparius, Professor of Medicine at Venice, *De atramentis cujuscunque generis opus sane novum, hactenus a nemine promulgatum*. The edition which we have consulted was printed at London in 1660; but the Work was first published at Venice in 1619. The reader may be satisfied with the following brief and correct abstract of its contents, which we borrow from Astle, in his *Origin and Progress of Writing*, a Work to which we are already indebted for some of the particulars given above. The Treatise of Caniparius is divided into six Parts, the Ist of which treats generally of Inks made from pyrites, stones, and metals. The IId more particularly of Inks made from metals and calxes. The IIIId of Inks made from soot and vitriols. The IVth of the different kinds of Ink used by the *Librarii*, or Book-writers, as well as by Printers and Engravers, and of staining or writing upon marble, stucco, or scagliola, and of encaustic modes of writing; as also of Liquids for painting or colouring of leather, cloths, linen, and woollen, and for restoring Inks that have been effaced by time; as likewise many methods of effacing writing, restoring decayed paper, and of various modes of secret writing. The Vth of Inks for writing, made in different Countries of various materials and colours; as from gums, woods, the juice of plants, &c. and also of different kinds of varnishes. The VIth treats of the various operations of extracting vitriol, and of its Chemical uses. Astle justly concludes by adding that this entertaining volume abounds with a great variety of Philosophical, Chemical, and Historical knowledge. Our limits will not permit us to do more than to copy a single receipt for Ink, in those which might be Latin Hexameters, if the ignorance of the Poet or of the Compositor had permitted closer adherence to metre. They are the produce *Incerti Auctoris*, and occur in iv. 11.

Dr. Lewis.

Dr. Lewis (*Phil. Commerce of the Arts*, 377.) has given a valuable series of experiments on Ink-making; to which we cannot do better than refer the reader. He strongly recommends the following preparation:

Logwood 1 oz.
Powdered nutgalls 3 ozs.
Green vitriol (sulphate of iron) 1 oz.
Water 1 to 2 quarts.

Boil the logwood and nutgalls in the water, adding fresh Liquid in proportion to the evaporation, strain it through a cloth, and add the vitriol to the Liquid, together with one or two ounces of gum Arabic. As soon as these have dissolved, the Ink is fit for use. A little powdered cloves is sometimes added to prevent mouldiness. The fullest black is produced by an equal mixture of green vitriol and galls, but such Ink very soon fades. The addition of logwood increases the blackness.

Marking
Ink.

Nitrate of silver forms the common *indelible* or *marking Ink*.

Mr. Brande.

Mr. Brande (*Man. of Chem.* 394.) bears in mind the older receipts. To the above ingredients he adds a quart of vinegar. They are to be put into a bottle, and shaken occasionally during twelve or fourteen days, and when the coarser parts have settled, the Ink may be poured off for use. About three grains of corrosive sublimate dissolved in each pint may be substituted for cloves. If the writing has faded it may be restored by washing it first with vinegar, and afterwards with infusion of galls. Acids destroy the colouring matter, and those Inks which resist their action contain some other colouring principle, usually finely powdered charcoal. Common writing Ink is on this account much improved

by dissolving in the quantity above mentioned about an ounce of Indian Ink, which for the most part is lamp-black made into a cake with Isinglass, or some animal glue.

INK.

In Nicholson's *Journal*, for July, 1802, (vol. ii. Mr. Close. p. 145.) may be found a paper on the composition of Ink by Mr. W. Close. It states that the Ink most commonly used by European writers consists of an infusion of galls and other astringent vegetables containing gallic acid, blackened by sulphate of iron, and thickened by gum or sugar. The colour of these mixtures is not durable, and their traces may be totally discharged by oxygenated muriatic Acid. This agency may be resisted by the addition of pigments, but the writing may then be obliterated by washing with plain water. To secure permanence in writing, Mr. Close recommends the following composition:

Oil of lavender 200 grains.
Powdered copal 25
Lamp-black 3

Dissolve the copal in the oil by a gentle heat, and mix the lamp-black with the solution on a marble slab; let the mixture after a few hours be well shaken and stirred, and, if too thick, it may be diluted by more oil of lavender or of turpentine, or by alcohol. For red Ink take

Oil of lavender 120 grains.
Powdered copal 17
Sulphuret of mercury 60

In the same Work (*Supplement* to vol. xxix. p. 359.) is an Abridgement from a Report made to the French Institute in the *Annales de Chimie*, vol. lxxv. p. 194, and another paper from vol. lxxiv. p. 153. It is there stated that whenever the whole of iron used in Ink has been removed from paper, restoration of the writing is impossible. In many instances it may be revived by gallic Acid, by liquid prussiate of lime or potash, or by hydroguretted alkaline sulphurets, diluted with two-thirds their quantity of water. Little advance, it is observed, has been made in the composition of Ink since the days of Lewis, but the following formula is recommended:

French
Institute.

Rain or river water . . . 1 quart.
Bruised galls 4 oz. Troy.

This infusion should stand about six months, the mother being carefully removed from it from time to time, and the tannin separated by filtration; then dissolve in it,

Powdered gum Arabic . . 1 oz. Troy.
Powdered sulphate of iron 1 oz.

and the mixture is to be well shaken.

It is as hazardous to interfere with any other man's *Carbon Writing Ink* as it would be to impinge the orthodoxy of his favourite preacher or to doubt the skill of his family apothecary; but that which always has appeared to us to unite in one all the most desirable qualities, is the *Carbon Writing Ink*, prepared by Johnson and Co. of Great Totham, Essex.

Dr. Ure, in his *Dictionary of Chemistry*, points out two inconveniences of very frequent occurrence, which result from the usage of vinegar or sulphate of copper among the ingredients of Ink. The Acid of the first acts so strongly upon the pen as to make it require continual mending; and unless the pen be very perfectly wiped for mending, (which is seldom the case,) a film of copper is deposited by the second upon the knife, and the blade is effectually blunted.

Yellow Ink.

Sympathe-
tic Inks.

Several methods for restoring the colour of Ink in faded writing may be found in a paper by Mr. Blagden in the volume of the *Philosophical Transactions* for the year 1787. But in most of the applications great care must be taken that the paper or parchment be not irretrievably damaged.

The fittest basis for *Printer's Ink* is nut oil. Linseed oil is next to it in good qualities. Other oils cannot be employed because they cannot be sufficiently freed from their unctuousity. They would smear and stain the paper, if not while at the Press, certainly in the hands of the Bookbinder. To make this Ink, the oil should be boiled in an iron pot only half filled; it is to be allowed to burn for half an hour, and then to be boiled gently till it acquires proper consistency. In this state it is called *varnish*, of which two kinds are prepared, a thicker and a thinner. It is afterwards ground with lamp-black in the proportion of $2\frac{1}{2}$ oz. to 16 oz. of oil. New oil sometimes requires a little boiled oil of turpentine and a little litharge, but this may cause the Ink to stick too firmly to the types. (Lewis, *Phil. Commerce of the Arts*, 371.) This and similar compositions are no other than black paint, and resemble in that particular the Ink of the Ancients. Engravers boil their oil in a less degree, so that it is not adhesive; they likewise use Frankfort black, which is not gritty, and affords a stronger colour than either lamp-black or charcoal.

For *Red Ink*, infuse a quarter of a pound of rasped Brazil wood for two or three days in vinegar. Boil this infusion for an hour over a gentle fire, and filter it while hot through paper. Then placing it again on the fire, dissolve in it half an ounce each of gum Arabic, alum, and white sugar. Otherwise beat together the glair of four eggs, a tea-spoonful of white powdered sugar, and as much spirit of wine, till they be of the consistence of oil. Then add enough vermilion to produce a proper colour. Keep it well stopped, and shake it before it is used. Gum-water, or a thin size of isinglass and honey, may supply the place of eggs. Or, lastly, dissolve 17 grains of powdered copal in 120 grains of oil of lavender, and mix with this solution, upon a smooth slab, 60 grains of red sulphuret of mercury. The colour thus obtained is very permanent.

For *Blue Ink* grind indigo with honey and the glair of eggs or other gluten, and dilute it with water.

For *Green Ink* infuse an ounce of powdered verdigrise in a quart of water, and strain it after it has stood a few days; dissolve in this infusion five drams of gum Arabic and two drams of white sugar.

For *Yellow Ink* infuse saffron in water, and add alum and gum Arabic. And as a general rule for all colours, take the ingredients used for dyeing, and make them with a little alum and gum Arabic into a strong decoction.

The rudiments of *Sympathetic*, or *Secret Ink*, as Beckmann shows, (i. 173.) are discoverable in the Latin amatory Poets. Thus Ovid recommends the fair, whom he is instructing in easy methods of avoiding her guardian's vigilance, to correspond with her lover in new milk, which may afterwards be sprinkled with charcoal. (*de Arte Aman.* iii. 629.) Ausonius advises Paulinus to adopt a like method, (*Epist.* xxii. 21.) and boasts that he could teach him countless other manners of secret communication:

*Innumeras possum celandi ostendere formas,
Et clandestinas veterum reserare loquelas.*

These *secret media* acquired the name of *Sympathetic* from the doctrine of *Sympathy*, which during the XVIth century was the favourite veil for ignorance. One of the mineral solutions which produces the most surprising and unlooked for effects, was, probably, discovered early in that century, and from the nature of its operation, the name, which has now become general for all secret Inks, was first applied. Lead dissolved in vegetable acid affords a colourless Liquid, letters written by which become black if exposed, even at a considerable distance, and even with the intervention of a thin wall, to the vapour of arsenical liver of sulphur. This Ink, Beckmann believes to have been first mentioned by Peter Borel, who, in 1653, published *Historiarum et Observationum Medico-physicarum Centuriæ quatuor*, and according to then received notions, called the preparation *A Magnetic water which acts at a distance*. The transition from *Magnetic* to *Sympathetic* was extremely easy, and the latter name was first employed in a receipt to be found in the *Collectanea Chymica Leydensia* of Le Mort, 1684.

We cannot venture to do more than touch upon the numerous Sympathetic preparations, and here we shall again borrow from Dr. Ure.

"1. If a weak infusion of galls be used, the writing will be invisible till the paper be moistened with a weak solution of sulphate of iron. It then becomes black, because those ingredients form Ink. 2. If paper be soaked in a weak infusion of galls, and dried, a pen dipped in the solution of sulphate of iron will write black on that paper, but colourless on any other. 3. The diluted solutions of gold and silver remain colourless upon paper till exposed to the sun's light, which gives a dark colour to the oxides, and renders them visible. 4. Most of the Acids or saline solutions, being diluted, and used to write with, become visible by heating before the fire, which concentrates them, and assists their action on the paper. 5. Diluted prussiate of potash affords blue letters when wetted with a solution of sulphate of iron. 6. A solution of cobalt in *aqua regia* when diluted, affords an Ink which becomes green when held to the fire, but disappears again when suffered to cool. This has been used in fanciful drawings of trees, the green leaves of which appear when warm, and vanish again by cold. If the heat be continued too long after the letters appear it renders them permanent. 7. If oxide of cobalt be dissolved in acetic Acid, and a little nitre added, the solution will exhibit a pale rose colour when heated, which disappears on cooling. 8. A solution of equal parts of sulphate of copper and muriate of ammonia, gives a yellow colour when heated, that disappears when cold. Sympathetic Inks have been proposed as the instrument of secret correspondence; but they are of little use in this respect, because the properties change by a few days remaining on the paper; most of them have more or less of a tinge when thoroughly dry; and none of them will resist the test of tinging the paper till it begins to be scorched."

Beckmann refers for an account of various kinds of secret writing to Halle, *Magie oder Zauberkräfte der Natur*, Berlin, 1783, i. 138. Many receipts and many amusing tricks performed by them may be found in that volume of the *Encyclopédie Méthodique* which treats of *Les Amusemens des Sciences*, ad v. *Encre*.

Holinshed.

A curious picture of the state of English INNS in the reigns of Henry VIII. and Elizabeth is given by Holinshed in the *Description of England* prefixed to his *Chronicles*:—"Those towns that we call thorowfares have great and sumptuous Innes builded in them, for the receiving of such travellers and strangers as passe to and fro. The manner of harbouring wherein is not like to that of some other Countries, where the Host or Goodman of the house dooth challenge a lordlie authority over his gneests, but cleane otherwise, sith everie man may use his Inne as his owne house in England, and have for his monie how great or little varietie of vittels, and what other service himself shall thinke expedient to call for. Our Innes are also verie well furnished with naperie, bedding, and tapisserie, especiallie with naperie; for besides the linnen used at the tables, which is commonlie washed dailie, is such and so much as belongeth unto the estate and calling of the ghest. Each commer is sure to lie in cleane sheets, wherein no man hath beene lodged since they came from the landresse, or out of the water wherein they were last washed. If the traveller have an horsse, his bed dooth cost him nothing, but if he go on foot, he is sure to paie a penie for the same: but whether he be horsseman or footman, if his chamber be once appointed he may carie the kaie with him, as of his owne house, so long as he lodgeth there. If he loose ought whilest he abideth at the Inne, the Host is bound by a general custome to restore the damage, so that there is no greater securitie any where for travellers than in the gretest Inns of England. Their horssees in like sort are walked, dressed, and looked unto by certeine hostellers or hired servants, appointed at the charges of the Goodman of the house, who, in hope of extraordinarie reward, will deale verie diligentlie after outward appearance in this their function and calling. Herein, neverthesse, are manie of them blameworthy, in that they do not onelie deceive the beast oftentimes of his allowance by sundrie meanes, except their owners looke well to them; but also make such packs with slipper merchants which hunt after preie, (for what place is sure from evill and wicked persons?) that manie an honest man is spoiled of his goods, as he travellet to and fro, in which feat also the counsel of the tapsters, or drawers of drinke, and chamberlein is not seldome behind or wanting. Certes I believe not that chapman or traveller in England is robbed by the waie without the knowledge of some of them; for when he commeth into the Inne, and alighteth from his horsse, the hosteler forthwith is verie busie to take downe his budget or capcase in the yard from his sadle bow, which he peiseth slilie in his hand to feill the weight thereof; or if he misse of this pitch, when the guest hath taken up his chamber, the chamberleine that looketh to the making of the beds will be sure to remove it from the place where the owner hath set it, as if it were to set it more convenientlie some where else, whereby he getteth an inkling whether it be monie or other short wares, and thereof giveth warning to such od ghests as haunt the house, and are of his confederacie, to the utter undoing

VOL. XXIII.

of manie an honest yeoman as he journieth by the waie. The tapster, in like sort, for his part, dooth marke his behaviour, and what plentie of monie he draweth when he paieth the shot, to the like end; so that it shall be a hard matter to escape all their subtile practises. Some think it a gay matter to commit their budgets at their comming to the Goodman of the house; but thereby they often bewraie themselves. For albeit their monie be safe for the time that it is in their hands, (for you shall not heare that a man is robbed in his Inne,) yet after their departure the Host can make no warrantise of the same, sith his protection extendeth no further than the gate of his owne house: and there cannot be a surer token unto such as prie and watch for those booties, than to see anie ghest deliver his capcase in such maner. In all our Innes we have plentie of ale, beere, and sundrie kindes of wine, and such is the capacitie of some of them, that they are able to lodge two hundred or three hundred persons and their horssees at ease, and therto with a verie short warning make such provision for their diet, as to him that is unacquainted withal may seem to be incredible. Howbeit of all in England there are no worse Inns than in London, and yet manie are there far better than the best that I have heard of in anie forren countrie, if all circumstances be duly considered. But to leave this and go in hand with my purpose. I will here set doune a Table of the best Thorowfares and Townes of greatest travell of England, in some of which there are 12 or 16 such Innes at the least as I before did speake of. And it is a world to see how ech owner of them contendeth with other for goodnesse of interteinement of their ghests, as about finesse and change of linnen, furniture of bedding, beautie of roomes, service at the table, costlinesse of plate, strength of drinke, varietie of wines, or well using of horssees. Finallie, there is not so much omitted among them as the gorgeusnes of their verie signs at their doores, wherein some doo consume thirtie or fortie pounds, a meere vanitie, in my opinion, but so vaine will they needs be, and that not onelie to give some outward token of the Inne-keeper's welth, but also to procure good ghests to the frequenting of their houses, in hope there to be well used. Lo here the Table now at hand, for more of our Innes I shall not need to speake." (Book iii. 16.)

The Table we need not extract; but if the above account be not overcharged, it must needs be confessed that, save in the extinct trade of highway robbery, we are little improved in the accommodation of Travellers, as far as Inns are concerned, since the XVIth century. Even Paul Hentzner, who visited England in the reign of Elizabeth, and who by no means saw all matters *en couleur de rose*, states that on landing at Rye (a place whereof at present he would not speak quite so favourably) "we were conducted to an Inn where we were very well entertained, as one generally is in this Country." (*Travels*, 1.)

ner.

Fynes Moryson, who travelled a little later, (he died in 1614,) speaks of still more halcyon days, when touring must have been almost cheaper than staying at home:—"As soone as a passenger comes to an Inne, the servants run to him, and one takes his horse and walkes him till he be cold, then rubs him down and gives him meat. Another servant gives the passenger his private chamber and kindles his fire; the third pulls off his booties and makes them cleane; then the host or hostess visits him; and if he will eate with the

hoste, or at a common table with others, his meale will cost him sixpence, or in some places but fourpence; but if he will eate in his chamber, he commands what meate he will according to his appetite; yea, the kitchen is open to him to order the meate to be dressed as he likes beste. After having eaten what he pleases, he may with credit set by a part for the next day's breakfast. His bill will then be written for him, and should he object to any charge, the host is ready to alter it."—*Itinerary*, p. iii. 151.

Regulations
of Ed-
ward VI.

In an extract given by Stow (v. 24.) from "The Assize of divers Artificers after the Book of Henry Brooke, Esquire, Clerk of the Market of our Sovereign Lord King Edward IV., in the year of his most noble reign the 8th, and the year of Christ 1468," the following regulation occurs respecting an "Innholder. Also the Assize of an Innholder is that his Mesures ben assised and selid, that he sellith his provander by; and he to have of every busshel provander one peny of wynnyngs over that the Market gooth; and his Botell of Hay of an halfpeny shal wey seven pound, and his Litter free; or ellis his Litter to wey a peny worth of Horsebread, kepyng th' Assize, though a lode of hey be solde at 13s. 4d.; and his fagot of wood of an halfpeny shal be three shaftmonde about and a half and a yard of length; and his peny fagot shal be 7 shaftmonde about, keeping the same length. And he shal sell a pot of three pyntes of the best ale within hym for a peny. And if he be a brewer, he for to sell as another brewer dooth: and that he bake no maner of brede within him for to sell. And if he do the contrary to any of thees, he to be amerced the first tyme 12d., the second tyme 20d., the third time 40d., and so forth. And if he kepe any Bawdry within hym, his fyne is at every tyme 6s. 8d. And if he wol not beware by two warnyngs, the third tyme to be juged to the pyllory, and afterward for to forswere the Towne." A "Taverner" is separately assised, and appears to have dealt in Wine only. If he sold any of this "fectife" he was very severely punished.

Star Cham-
ber Ordi-
nance, 1633.

As late as 1633 the Star Chamber, which was seldom so beneficially employed, issued a sumptuary Ordinance "to prevent all Impositions by Innkeepers." Hay and oats must at that time have been very dear, for "'tis commanded that no Innholder within the Cities of London or Westminster, or ten miles of the same, shall take above sixpence in 24 hours for hay for one horse, nor more than sixpence for a peck of oats."

Present en-
actments.

A common Inn, in *Law*, is a house where travellers are lodged and furnished with such things as they have occasion for whilst on their way. This description includes not only such houses as are usually called Inns, but also all Public-houses, Taverns, and Hotels, the keepers of all these establishments having the same rights, and being subject to the same liabilities. An Innkeeper is bound in *Law* to receive and entertain all proper persons who wish to be admitted; and if he refuse, after the traveller has tendered to him a reasonable price for the accommodation required, the traveller may recover in an action at *Law* reasonable damages for the inconvenience occasioned to him by the refusal; but if the house is already full, this obligation of the Innkeeper necessarily ceases. He would also be justified in refusing to admit a person affected with a contagious or infectious disorder. When the guest is admitted, his luggage and his other goods are immediately placed by the *Law* under the protection of the Innkeeper, who in almost all cases is answerable for

their safety. If the goods be lost, the Innkeeper is liable; so if they be stolen, either by the servants or by persons staying in the Inn as guests, or even by perfect strangers wholly unconnected with it. If a guest be forcibly robbed by the servants or inmates of the Inn, the Innkeeper must make good the loss; but he is not answerable for any injury done to the person of his guest. The Innkeeper is discharged from liability if the loss be occasioned either by inevitable accident, or by the open force and violence of strangers neither belonging to nor residing in the Inn, or by persons whom the guest has himself introduced into the Inn as his friends or servants. Again, where the person whose goods are stolen from the Inn was not using the house as an Inn at the time, the peculiar liability of the Innkeeper is discharged; therefore a traveller who had a particular room given up to him, which he used as a warehouse for the purpose of displaying goods for sale, some of which were stolen, could not recover their value from the Innkeeper. If the Innkeeper puts the horse of his guest out to grass and it is stolen, he is liable; but if he did so at the request of the guest himself, he is not so. By way of compensation for these liabilities, the *Law* gives to Innkeepers certain rights and remedies, by which they may the more easily enforce prompt payment of their demands. In the first place they need never admit any one who is incapable of paying for the accommodation provided. Secondly, they have a lien on the person of the guest and on the goods or horses which he brings with him to the Inn. If the guest attempts to go away without paying, his person and all his goods may be detained until payment is made. If the guest has made his escape, he or his goods may be brought again and detained, provided the pursuit is instituted immediately upon the discovery of his escape. But if he is permitted to depart, and no pursuit is made after him, the lien on his person and goods is gone for ever, and the Innkeeper is left to sue for his debt in a Court of *Law*. Even if the guest return of his own accord to the Inn, his person and goods may only be detained until the debt incurred upon the second visit be paid; and if the Innkeeper detain either of them for the purpose of compelling payment of the former debt, he will render himself liable to an action. The Innkeeper may only detain, and may not sell the goods of his guest, except in London and Exeter, where, by a particular custom, the Innkeeper may have a horse valued by four of his neighbours, and when it has eaten its price, he may either take it himself at that valuation or sell it. The goods and cattle of a guest at an Inn are privileged from distress, although generally the goods of a stranger may be distrained if found on the premises for which the rent is due. By Statute 6 George IV. c. 16. Innkeepers were for the first time made subject to the Bankrupt Laws.

No clearer account of the *Inns of Court*, and the ancient methods of study pursued in them, has been given than that which may be found in Sir Edward Coke's *Preface* to the III^d Part of his *Reports*. "Now for the Degrees of the *Law*, as there be in the Universities of Cambridge and Oxford divers Degrees, as general Sophisters, Bachelors, Masters, Doctors, of whom be chosen men for eminent and judicial places both in the Church and Ecclesiastical Courts; so in the Profession of the *Law*, there are *Mootemen*, which are those that argue *Readers'* cases in Houses of Chancery, both in

Terms and Grand Vacation. Of Mootemen, after eight years' study or thereabouts, are chosen *Utterbarristers*; of these are chosen Readers in Inns of Chancery. Of Utterbarristers, after they have been of that Degree twelve years at least, are chosen *Benchers* or *Ancients*: of which one that is of the puisne sort reads yearly in summer vacation, and is called a *single Reader*; and one of the Ancients that had formerly read, reads in Lent Vacation, and he is called a *double Reader*; and commonly it is between his first and second Reading about nine years. And out of these the King makes choice of his Attorney and Solicitor General, his Attorney of the Court of Wards and Liveries, and Attorney of the Duchy: and of these Readers are *Sergeants* elected by the King, and are by the King's Writ called *ad statum et gradum servientis ad legem*: and out of these the King electeth one, two, or three, as please him, to be his Sergeants, which are called the *King's Sergeants*: of Sergeants are by the King also constituted the honorable and reverend *Judges*, and *Sages of the Law*. For the young student, which most commonly cometh from one of the Universities, for his entrance or beginning were first instituted and erected eight *Houses of Chancery*, to learn there the elements of the Law; that is to say, Clifford's Inn, Lyon's Inn, Clement's Inn, Barnard's Inn, Staple's Inn, Furnival's Inn, Thavie's Inn, and New Inn; and each of these Houses consists of forty or thereabouts. For the Readers, Utterbarristers, Mootemen, and inferior Students are four famous and renowned Colleges or Houses of Court, called the Inner Temple, to which the first three Houses of Chancery appertain; Gray's Inn, to which the next two belong; Lincoln's Inn, which enjoyeth the last two but one; and the Middle Temple, which hath only the last. Each of the Houses of Court consists of Readers (or Benchers) above twenty; of Utterbarristers above thrice as many; of young gentlemen about the number of eight or nine score, who there spend their time in study of Law, and in commendable exercises fit for Gentlemen. The Judges of the Law and Sergeants, being commonly above the number of twenty, are equally distinguished into two higher and more eminent Houses, called *Sergeants' Inn*. All these are not far distant from one another, and altogether do make the most famous University for Professors of Law only, or of any one human science, that is in the world, and advanceth itself above all others *quantum inter viburna cupressus*. In which Houses of Court and Chancery, the Readings and other Exercises of the Law therein continually used are most excellent and behoofful for attaining to the knowledge of these Laws; and of these things this taste shall suffice, for they would require, if they should be treated of, a Treatise by itself. Of the antiquity of these Houses, and how they have been changed from one place to another, I may say as one said of ancient Cities, *perpaucæ antiquæ Civitates authores suos norunt*.

We have commenced with this account given by Sir Edward Coke, because it appears extremely distinct and explicit, rather than with another which in point of time ought to precede it. Sir Edward Fortescue, who was one of Coke's predecessors in the same high office of Lord Chief Justice of England, and afterwards held that of Lord Chancellor during a considerable part of the reign of Henry VI., in his Treatise *de Laudibus Legum Angliæ*, has described to Prince Edward, the only son of his dethroned Sovereign, the nature of the Inns of Court as they existed in his time, and many of

the particulars are extremely curious as contrasted with their state at present. Each of the ten lesser Inns of Chancery, he says, (for he adds two and sometimes more to those mentioned by Sir Edward Coke,) maintains at least one hundred students, and some of them much more, although not all constantly residing. These, after having made some progress in the study of Original and Judicial Writs, are admitted into one of the four Inns of Court, the least frequented of which has about two hundred students. "In these greater Inns a student cannot well be maintained under £28 a year; and if he have a servant to wait on him, (as for the most part they have,) the expense is proportionably more: for this reason, the students are sons to persons of quality; those of an inferior rank not being able to bear the expense of maintaining and educating their children in this way. As to the merchants, they seldom care to lessen their stock in trade by being at such large yearly expenses. So that there is scarce to be found throughout the kingdom an eminent Lawyer, who is not a gentleman by birth and fortune; consequently they have a greater regard for their character and honour than those who are bred in another way." Thus far Mr. Amos's translation; in the next paragraph the Chief Justice shall speak for himself. *In his reverà Hospitiis majoribus, etiam et minoribus, ultra studium Legum, est quasi Gymnasium omnium morum qui Nobiles decent. Ibi cantare ipsi addiscunt, similiter et se exercent in omni genere Harmoniæ; ibi etiam tripudiare, ac Jocos singulos Nobilibus convenientes, qualiter in Domo Regiâ exercere solent enutriti.* The remainder is most highly laudatory, and gives a very agreeable picture of the discipline and good conduct of these Law Schools. "At other times, out of Term, the greater part apply themselves to the study of the Law. Upon Festival days, and after the offices of the Church are over, they employ themselves in the study of sacred and prophane History: here every thing which is good and virtuous is to be learned; all vice is discouraged and banished. So that Knights, Barons, and the greatest Nobility of the kingdom often place their children in these Inns of Court, not so much to make the Laws their study, much less to live by the Profession, (having large patrimonies of their own,) but to form their manners, and to preserve them from the contagion of vice. The discipline is so excellent, that there is scarce ever known to be any picques or differences, any bickerings or disturbances amongst them. The only way they have of punishing the delinquents is by expelling them the Society: which punishment they dread more than criminals do imprisonment and irons; for he who is expelled out of one Society is never taken in by any of the others. Whence it happens that there is a constant harmony amongst them, the greatest friendship, and a general freedom of conversation. I need not be particular in describing the manner and method how the Laws are studied in these places, since your Highness is never likely to be a student there. But I may say in the general, that it is pleasant, excellently well adapted for proficiency, and every way worthy of your esteem and encouragement. One thing more I will beg leave to observe, viz. that neither at Orleans, where both the Canon and Civil Laws are professed and studied, and whither students resort from all parts; neither at Angiers, Caen, nor any other University in France, (Paris excepted,) are there so many students, who have passed their minority, as in our Inns of

Antiquity of the Inns.

Stow's account.

Reading.

Mooting.

It is not possible precisely to determine the antiquity of the establishment of the Inns of Court. The received opinion is, that Societies of Lawyers, which before the Conquest held their chief abodes for study in Ecclesiastical Houses, began to be collected into permanent residences soon after the Court of Common Pleas was directed to be held in a fixed place, a stipulation which occurs in the Great Charters, both of King John and Henry III. (Blackstone, *Introd.* 1. vol. i. 23.) In these Houses Exercises were performed, Lectures read, and Degrees conferred; that of Barristers, or, as they were first styled, *Apprentices*, (*apprendre*, to learn,) answering to Bachelors; that of Sergeants, *servientes ad legem*, to Doctors.

Stow, in his *Survey of London*, (book i. c. 21.) after having given an account of the several Inns and their Constitutions, adds the following particulars relative to their *Readings* and *Mootings*. "For the times of these Mootings they divide the year into three parts, viz. 1. the Learning Vacation; 2. the Term times; 3. the Dead, or Mean Vacation. They have two Learning Vacations, viz. Lent Vacation, which begins the first Monday in Lent, and continues three weeks and three days, and Summer Vacation, which begins the Monday after Lammas day and continues also three weeks and three days. And in these Vacations are the greatest conferences and exercises of study."

"*The manner of these Readings.* The Benchers appoint the eldest Utter Barrister to read amongst them openly in the Hall, of which he hath notice half a year before. The first day he makes choice of some Act or Statute, whereupon he grounds his whole Reading for that Vacation. He reciteth certain doubts and questions which he hath devised upon that Statute, and declares his judgment thereon. After which one of the Utter Barristers repeateth one question propounded by the Reader, and by way of argument doth labour to prove the Reader's opinion to be against Law. And after him the senior Utter Barrister and Reader, one after another, do declare their opinions and judgements in the same. And then the Reader who did put the case endeavours to confute the objections laid against him, and to confirm his own opinion. After which the Judges and Sergeants, if any there be, declare their opinions. Then the youngest Utter Barrister again rehearseth another case, which is prosecuted as the former was. And this exercise continueth daily three or four hours. The manner of Reading both in Lent and Summer Vacations are performed after the same manner: and usually out of these Readers the Sergeants are chosen."*

"*The manner of Mooting in the Inns of Court.* In these Vacations, after supper in the Hall, the Reader, with one or two of the Benchers, comes in, to whom one of the Utter Barristers propounds some doubtful Case, which being argued by the Benchers, and lastly by him that moved the Case, the Benchers sit down on the Bench at the upper end of the Hall: and upon the form in the middle of the Hall sit two Utter Barristers; and on both sides of them, on the same form, sits one Inner Barrister, who, in Law French, doth declare to the Benchers some kind of action, the one being as it were retained for the Plaintiff, and the other for the

Defendant: which ended, the two Utter Barristers argue such questions as are disputable within the said Case. After which the Benchers do likewise declare their opinions, as how they take the Law to be in these Questions." Mooting has long since been disused. Mr. Danby Pickering of Gray's Inn is recorded as the last person who voluntarily resumed the practice. "During the time of Reading, which heretofore continued three weeks and three days, the Reader keeps a constant and splendid Table; feasting the Nobility, Judges, Bishops, principal Officers of State, the chief Gentry, and sometimes the King himself. Insomuch that it hath cost a Reader above £1000."

Such, indeed, is stated to have been the expenditure, and that not for the whole time, but for even three or four days, when Francis North, afterwards Lord Keeper, and Baron Guildford, Read in the Middle Temple in the reign of Charles II. Roger North, in the *Life* of his great relation, adds, this "was so terrible an example, that I think none has ventured since to Read publicly; but the Exercise is turned into a Revenue, and a composition is paid into the Treasury of the Society:" "indeed," he adds, "the profusion of the best provisions and wine was to the worst of purposes, debauchery, disorder, tumult and waste." It seems a scramble was permitted among the rabble in the Hall for the table-decorations after the guests had looked at them for a short time. To the Exercise itself the Lord Keeper seems to have been a great friend, as also to that of Mooting; "he us'd to say that no man could be a good Lawyer who was not a Put-case."

In our account of the several Inns we shall chiefly refer to Sir William Dugdale, who in his *Origines Juridicales* has many Chapters respecting them. This matter was reprinted by Rayner in the year 1780, and the greater portion of it will be found also transcribed in the later Work of Herbert, *The History and Antiquities of the Inns of Court*.

Edward III. granted the mansion in Fleet-street, which had belonged, before their suppression, to the Knights Templars, to the Knights of St. John of Jerusalem; and they, in turn, during the same reign, devised it for a rent of £10 a year to certain Law Students, who are supposed to have removed thither from Thavie's Inn, Holborn. Chaucer himself was a student of the Temple, and his description of the Manciple is, probably, familiar to most of our readers. In the Rebellion of Wat Tyler this House became an object of plunder to his lawless followers, and Thomas of Walsingham has sufficiently described the havoc which they committed. After they had burned the Savoy, at that time the Palace of John of Gaunt, *satis malitiosè etiam locum qui vocatur Temple Barr, in quo apprenticii Juris morabantur nobiliores, diruerunt, ob iram quam conceperunt contra Robertum de Hales. . . ubi plurima munimenta quæ Juridici in custodiâ habuerunt igne consumpta sunt.* Not long after this calamity the Society had increased so largely that it was found advantageous to divide it into two Bodies, the *Inner Temple* and the *Middle Temple*. At the Dissolution, both these Societies continued to hold under the Crown by Lease; but in the 6th James I. the buildings, &c. were granted to them by Letters Patent, on the payment of £10 for each of the two mansions.

Excepting the Church, which we shall describe under the Middle Temple, to which Society it partly belongs, the buildings of the *Inner Temple* are entirely modern.

* It will be observed that no mention is here made of the *Single* and *Double Reader* of whom Sir Edward Coke has spoken.

INNS OF COURT. The Hall is a handsome but small room. The Library is well stored, and the Gardens towards the Thames are spacious and agreeable. They derive their chief celebrity from the use which has been made of them by Shakspeare, as the scene in which the partisans of the factions of York and Lancaster first assumed their respective badges. (*Henry V. Part I. act ii. sc. 4.*)

Orders.

Some of the Orders for good government and advancement of Learning which Dugdale has extracted from the Register of the Inner Temple, are characteristic of the several periods at which they were issued. "In 38 Henry VIII. (30 Maii) there was an Order made that the gentlemen of this company should reform themselves in their cut or disguised apparel and not to have long beards; and that the Treasurer of this Society should confer with the other Treasurers of Court for an uniform reformation, and to know the Justices' opinion thereon, and thereupon to perform the same. Whereupon in their Parliament, held 5 Maii, 1 and 2 Ph. and M., there was a decree made that no fellow of the House should wear his beard above three weeks' growth, upon pain of 20s. forfeiture. And for their better regulation in apparel, it was ordered in 36 Eliz. (16 Junii,) that if any fellow in commons or lying in the House did wear either hat or cloak in the Temple Church, Hall, buttery, kitchen, or at the buttery bar, dresser, or in the Garden, he should forfeit for every such offence 6s. 8d., and in 42 Eliz. (8 Feb.) that they go not in cloaks, hats, boots and spurs into the city, but when they ride out of the town. So also in 38 Eliz. (20 Dec.) that no fellow of this house shall come into the Hall with any weapons, except his dagger or his knife, upon pain of forfeiting the sum of £5." . . . "In 13 Henry VIII. in their Parliament, held 17 Julii, it was ordered that none of the Society should within this House exercise the play of shoffe-grote or slype-grote upon pain of 6s. 8d. And in Febr. 8. for the future prevention of disorder and scurrility, no more Plays should be in this House upon the Feast of All Saints or Candlemas day; but the order was repealed the 4th of November following."

Revels.

G. Legh's
account of
a Banquet.

The Inns of Court were much celebrated for the magnificence of their Revels, of which under our notice of CHRISTMAS we have already made some mention. For one of the earliest which is recorded in the Inner Temple we are indebted to the quaint pen of Gerard Legh in his *Accedens of Armoury*; and although the description is so interwoven with allegory and Heraldic mysticism, that it is not easy to separate fact from imagination, there can be little doubt that he was present at the festivity which he has depicted. He describes himself, in December, 1575, as landing near the Temple, and being surprised by the discharge of a peal of ordnance, which he is told by an honest Citizen is the signal that the Marshal of the Inner Temple was preparing for dinner. Either his curiosity or his appetite, or perhaps both, are whetted by this information, and on the next day he thought for his pastime to survey the buildings. Having entered he was conducted with much courtesy by "an Herehaughte, by name Palaphilos, a King at Arms," to his lodging. We have not space to insert all that he was told and all that he saw while under the protection of this excellent personage: nor indeed would it be much to our purpose. We therefore hasten at once to the Banquet which was served up to the Members of the Society, and which, after all the deductions to be made from a poetical description, must in plain prose have been a scene of great splen-

dour. "And as this tale ended, there napened such noyse of shotte as if it had beene at the battarye of Bulloynne, whereat I merveiled, thinking my selfe not in safetye. Feare not, (quoth Palaphilos,) for it is the master of the ordinaunce that scowreth his shot to trye their levell, to be in readyness when the Prince shall comaunde. Well, (quod I,) it is well foreseene in peace to provide for warre. Thus talking we entered the Prince's Hall, where anone we heard the noyse of drumme and fyffe. What meaneth this dromme? sayde I. Quod hee, This is to warne Gentelmen of householde to repaire to the dresser: wherefore come on with mee, and ye shall stande where ye may best see the Hall served. And so from thence brought mee into a long gallerye that stretcheth it selfe alongest the Hall, neare the Prince's table, where I sawe the Prince sett, a man of tall personage, of manlye countenance, somewhat browne of visage, strongly featured, and thereto comely proportioned in all lineaments of bodye. At the nether end of the same table were placed thembassadors of sundry Princes. Before him stode the Carver, Sewer, and Cup-bearer, with great number of gentelmen wayters attendinge his person. The Ushers making place to straungers of sundrye regions that came to behold thonour of this mighte captaine. After the placing of these honorable gests, the Lordes Steward, Treasurer, and Keeper of Pallas Seale, with dyvers honorable personages of that nobilitie, were placed at a side table nere adjoyning the Prince on the right hande. And at another table, on the left side, were placed the Treasurer of Housholde, Secretary, the Prince's Sergeaunt of Lawe, the iiii Masters of the Revelles, the Kynge of Armes, the Deane of the Chappell, and divers gentelmen Pensioners to furnish the same. At another table on thother side were set the Master of the Game, and his chief Ranger, Masters of Housholde, Clerks of the Greene Cloth and Checke, with divers other strangers to furnishe the same. On thother side againste them began the Table, the Lieutenant of the Tower, accompanied with divers Capitaines of footebandes and shotte. At the nether ende of the Halle began the Table. The High Butler and Panter, Clerkes of the Kitchen, Maister Cooke of the Privie Kitchen, furnished throughout with the souldiours and garde of the Prince. All which, with number of inferior Officers placed and served in the Hall, besides the greate resort of strangers, I spare to write. The Prince so served with tender meates, sweete fruits, and dainty delicates, confectioned with curious Cookery: as it seemed wonder, a worlde to serve the provision. And at every course, the Trompettes blewe the corragious blaste of deadlye warre, with noyse of drome and fyffe, with the sweete armory of vyollens, shakbutts, recorders and cornettes, with other instruments of musike, as it seemed Appollo's harpe had tewned there stroke. Thus the Hall was served after the most auncient order of the Iland, in commendation whereof I saye I have also sene the service of greate Princes, in solempne seasons and times of Triumph, yet thorder hereof was not inferior to any." (fol. 123.) The entertainment concluded with an allegorical Masque of twenty-four Knights, and "prices of honour for Tilt, Turney, and such Knightly pastime."

But the most magnificent show which, perhaps, was ever presented in these Kingdoms was the Masque exhibited in the Banqueting Room at Whitehall, by the Members of the Societies of all four Inns of Court, on Candlemas night 1633. Whitelock, in his *Memorials*,

INNS OF
COURT.Whitelock's
Account.

(*ad ann.*) has left a minute description of this solemnity, which is too long for entire extraction, and yet which scarcely ought to be mutilated by abridgement; for the festivity, of which he was one of the chief projectors and conductors, has found in him a fitting Chronicler also. The names of the Committee men will be read with interest from the great celebrity which most of them have obtained in other points: for the Middle Temple, Mr. Edward Hyde and Mr. Whitelock; for the Inner Temple, Sir Edward Herbert and Mr. Selden; for Lincoln's Inn, Mr. Attorney Noy and Mr. Gerling; and for Gray's Inn, Sir John Finch and Mr. ———. The cavalcade assembled at Ely House in Holborn, and in the evening set forward by torchlight to Whitehall. Twenty richly liveried footmen preceded the Marshal on horseback. Then followed one hundred "of the most proper and handsome young Gentlemen, five and twenty chosen out of each House, gallantly mounted on the best horses and the best furniture that the King's stables and the stables of all the Noblemen in town could afford." "Every one of these hundred Gentlemen were in very rich clothes, scarce any thing but gold and silver-lace to be seen of them; and each Gentleman had a page and two lacquies waiting on him in his livery by his horse-side: the lacquies carried torches and the page his master's cloak. The richness of their apparel and furniture glittering by the light of a multitude of torches attending on them, with the motion and stirring of their mettled horses, and the many and various gay liveries of their servants, but especially the personal beauty and gallantry of the handsome young Gentlemen, made the most glorious and splendid show that ever was beheld in England." In contrast, and as a foil to this gorgeous troop, followed a Buffoonery of Antimasquers: Cripples and Beggars mounted on sorry jades; Boys dressed as various birds surrounding an owl in an ivy-bush and sitting on small horses; and a burlesque of Projectors; and as the chivalry had been accompanied by solemn music, so these zanies also had their band, keys and tongs, pipes, whistles and bagpipes. Next, at various intervals filled by musicians, pages, and footmen, came two large open Chariots, drawn by six caparisoned horses and bearing characters habited as the Heathen Gods and Goddesses. The Grand Masquers followed; four from each Inn, each band in a separate chariot. So jealous had they been of precedence that the place of each Inn had been determined by casting dice, and the seats of the Masquers themselves, as we shall perceive, were allotted with strict regard to equality. "Then came the first Chariot of the Grand Masquers, which was not so large as those that went before, but most curiously framed, carved, and painted with exquisite art, and purposely for this service and occasion. The form of it was after that of the Roman Triumphant Chariots, as near as could be gathered by some old prints and pictures extant of them. The seats in it were made of an oval form in the back end of the chariot, so that there was no precedence in them, and the faces of all that sat in it might be seen together. The colours of the first Chariot were silver and crimson, given by the lot to Gray's Inn, as I remember; the Chariot was all over painted richly with these colours, and even the wheels of it most artificially laid on, and the carved work of it was as curious for that art, and it made a stately show. It was drawn with four horses all on breast, and they were covered to their heels all over with cloth

of tissue, of the colours of crimson and silver, huge plumes of red and white feathers on their heads and buttocks, the coachman's cap and feather, his long coat, and his very whip and cushion of the same stuff and colour. In this Chariot sat the four Grand Masquers of Gray's Inn, their habits, doublets, trunk-hose and caps of most rich cloth of tissue, and wrought as thick with silver spangles as they could be placed, large white silk stockings up to their trunk-hose, and rich sprigs in their caps; themselves proper and beautiful young Gentlemen. On each side of the Chariot were four footmen in Liveries of the colour of the Chariot, carrying huge flamboys in their hands, which with the torches gave such a lustre to the paintings, spangles and habits, that hardly any thing could be invented to appear more glorious." Bands of music were interposed between this and each of the three Chariots which followed, containing the Grand Masquers of the other Inns. They differed in no respect from the first, excepting in their colours. "The habits of the sixteen Grand Masquers were all the same, their persons most handsome and lovely, the equipage so full of state and height of gallantry that it never was outdone by any representation mentioned in our former Stories." The King and Queen watched the procession from a window of the Palace, and were so pleased that they desired "the whole show might fetch a turn about the Tilt yard that they might have a double view of them." In the Masque which followed, the Queen herself honoured some of the Masquers so far as to dance with them, and "to judge them as good dancers as ever she saw." They continued in their sports till the morning, and when their Majesties retired, the Inns of Court Gentlemen were brought to a stately banquet. "Thus," concludes Whitelock, in a strain of melancholy moralizing for which the manifest *gusto* wherewith he has described the pageant very ill prepares us, "Thus was this earthly pomp and glory, if not vanity, soon past over and gone as if it had never been." But it was not wholly ended; the Queen had been so delighted that she asked for a repetition; and the same cavalcade was again exhibited and the same Masque re-enacted, on the invitation of the Lord Mayor, (Freeman,) in Merchant Taylors' Hall. Of the lavish expense attendant upon it some estimate may be formed from the following statement. "The persons employed in this Masque were paid justly and liberally; some of the musick had £100 a piece, so that the whole charge of the musick came to about £1000. The clothes of the horsemen and the liveries of their pages and lacquies, which were at their own particular charge, were reckoned one with another at £100 a suit, at the least, and one hundred of those suits to amount to £10,000. The charges of all the rest of the Masque, and matters belonging to it were reckoned at as much more; and so the charge of the whole Masque which was borne by the Societies and by the particular Members of it was accounted to be above £21,000." In the end a deputation from the Inns of Court thanked the King and Queen for their gracious acceptance of service; the King and Queen thanked the Inns of Court for their respect, affection, and gallantry; and the Benchers of each Society thanked the Members of the Committee for their well ordering of the business. "Thus," once more repeats the philosophizing Memorialist, "these dreams passed and these pomps vanished." Charles I was so pleased with his entertainment that, as Dugdale has informed us with

Other Feasts. A particular account is likewise given by Dugdale of a Feast on Thursday, August 15, 1661, in the Great Hall of the Inner Temple, Sir Heneage Finch, Solicitor-General, being Reader; a banquet which was honoured by the presence of the King. The days kept at this time with greatest solemnity were All-hallows, Candlemas, and Ascension Day. The order of the celebration is described as follows. First, the Solemn Revels, after dinner and the Play ended, were begun by the whole House, Judges, Sergeants at Law, Benchers, and the Utter and Inner Bar led by the Master of the Revels. After this ceremony, one of the Gentlemen of the Utter Bar was chosen to sing a song to the Judges, Sergeants, or Masters of the Bench, which was usually performed, or in default of it was an amerciamment. Then the Judges and Benchers took their places, and sat down at the upper end of the Hall; which done the Utter Barristers and Inner Barristers performed a second Solemn Revel before them. This ended, the Utter Barristers took their places and sat down, and some of the Gentlemen of the Inner Bar presented the House with dancing, which was called the *Post Revels*. These dances were continued till the Judges or Bench thought proper to rise and depart.

Last Revel, in 1733. The last Revel celebrated in any of the Inns of Court was held in the Inner Temple, in honour of Mr. Talbot when he took leave of that House, of which he was a Bencher, on having the Great Seal delivered to him. The following account, furnished by an eye-witness, is given in the Notes on Wynne's *Eunomus*. (iv. 105.) "On the 2d of February, 1733, the Lord Chancellor came into the Inner Temple Hall about two of the clock, preceded by the Master of the Revels, (Mr. Wolleston,) and followed by the Master of the Temple, (Dr. Sherlock,) then Bishop of Bangor, and by the Judges and Sergeants who had been members of that House. There was a very elegant dinner provided for them and the Lord Chancellor's Officers, but the Barristers and Students of the House had no other dinner got for them than what is usual on *Grand days*; but each mess had a flask of claret, besides the common allowance of port and sack. Fourteen Students waited on the Bench-table, among whom was Mr. Talbot, the Lord Chancellor's eldest son; and by their means any sort of provision was easily obtained from the upper table by those of the rest. A large gallery was built over the screen and was filled with Ladies, who came for the most part a considerable time before the dinner began; and the music was placed in the little gallery, at the upper end of the Hall, and played at dinner time. As soon as dinner was ended the Play began, which was *Love for Love*, with the Farce of the *Devil to Pay*. The Actors who performed in them all came from the Haymarket in chairs ready dressed; and, as it was said, refused any gratuity for their trouble, looking upon the honour of distinguishing themselves on this occasion as sufficient. After the Play, the Lord Chancellor, Master of the Temple, Judges, and Benchers retired into their Parliament Chamber, and, in about half an hour afterwards, came into the Hall again, and a large ring was formed round the fire-place, but no fire nor embers were in it.

INNS OF COURT. Then the Master of the Revels, who went first, took the Lord Chancellor by the right hand, and he with his left took Mr. Justice Page, who joined to the other Judges, Sergeants and Benchers present, danced, or rather walked, round about the coal fire, according to the old ceremony, three times; during which they were aided in the figure of the dance by Mr. George Cooke, the prothonotary, then upwards of sixty: and all the time of the dance, the ancient song, accompanied with music, was sung by one Toby Aston, dressed in a bar-gown, whose father had been formerly Master of the Plea Office in the King's Bench. When this was over, the Ladies came down from the gallery, went into the Parliament Chamber, and staid about a quarter of an hour, while the Hall was putting in order: then they went into the Hall and danced a few minuets. Country dances began about ten, and at twelve a very fine collation was produced for the whole company: from which they returned to dancing, which they continued as long as they pleased; and the whole day's entertainment was generally thought to be very genteelly and liberally conducted. The Prince of Wales honoured the performance with his company part of the time: he came into the music gallery incog. about the middle of the Play, and went away as soon as the farce of walking round the coal fire was over." The dancing of these grave characters appears to have attracted satirical attention many years before Lord Chancellor Talbot's Revel. Bayes points to one of his Grand Dances in the *Rehearsal* in the following words:—"This now is an ancient dance of eight belonging to the Kings of Brentford, but since derived with a little alteration to the Inns of Court." Act v. sc. 1.

The three Inns of Chancery appertaining to the Inner Temple are 1. *Clifford's Inn*, on the North side of Fleet-street, adjoining to St. Dunstan's Church, anciently belonging to and being the town residence of the Barons Clifford, from whom it derives its name. It was granted to the seventh Baron in the 3d Edward II. His widow let it to the Law Students, *apprenticiis de banco*, in the 18th Edward III., and in the reign of Henry VI. it was granted in fee farm to a Principal and twelve Rulers. 2. *Lyon's Inn*, between Holywell Street and Wych Street, the origin of which and of its name are forgotten, although in the Steward's Books, still preserved, are to be found entries during the reign of Henry V. It was ruled by a Treasurer and twelve Ancients. 3. *Clement's Inn*, to the North of the Church in the Strand, from which it is named, near which was once a celebrated Holy well, dedicated to the same Saint and frequented on Festivals. On the East of the Inn, at the lower end of Clement's Lane, a pump is now placed in these waters. It existed as an Inn of Chancery in the reign of Edward IV. The buildings are all modern. It must not be omitted that Shakspeare makes Justice Shallow a Student of this Inn, where, as the sagacious Magistrate boasts, "they talk of mad Shallow still."

The Constitutions of the *Middle Temple* are given at great length by Dugdale, who marks several points by which it may be deemed inferior to its adjoining sister. "1st, There are no lands nor revenues belonging to the House whereby any learner or Student might be holpen or encouraged to study by means of some yearly stipend or salary; which is the occasion that many a good witt for lack of exhibition is compelled to give over and forsake study before he have any perfytt knowledge in the Law, and to fall to practisyng and become

a typler in the Law. 2dly, There is none there that be compelled to learn, and they that are learners, for the most part, have their studies and places of learning so set that they are much troubled with the noise of walking and communication of them that be no learners: and in the Terme time they are so unquieted by Clyents and servants of Clyents that resort to such as are Attorneys and Practisers, that the Students may as quietly study in the open streets as in their studies. Item, they have no place to walk in and talk and confer their learnings but in the Church: which place all the Terme times hath in it no more quietness than the pervyse of Pawles, by occasion of the confluence of such as are suitors in the Law. 3dly, The fashion of their House in the night. In the night time they have not their gates shut, so that every man may go in and out through the House all seasons of the night, which is occasion that their Chambers are oftentimes robbed and many other misdemeanours used. 4tly, They now have no Library, so that they cannot attaine to the knowledge of divers learnings, but to their great charges, by the buying of such books as they lust to study. They had a simple Library in which were not many bookes besides the Law, and their Library, by meanes that it stood allwayes open, and that the learners had not each of them a key unto it, it was at the last robbed and spoiled of all the bookes in it. Lastly, (a point wherein we think the Middle Templars exercised sound discretion,) "if it happen that the plague of pestilence be any thing nigh their House, they immediately break up their House and every man goeth home into the country, which is a great loss of learning." It is plain from these charges that the Middle Temple was by no means in good repute with Dugdale.

Orders.

The dress of the Members of this House was regulated with great care and by numerous Orders. The Students wore a gown, and in Term time a round cap. In 4th and 5th Philip and Mary it was ordered "that none of this Society should thenceforth wear any great bryches in their hoses, made after the Dutch, Spanish, and Almon fashion, or lawnde upon their capps, or cut doublets upon pain of 3s. 4d. forfeiture for the first default, and the second time to be expelled the House." By another Order, 26th Eliz. it was determined that no great ruff should be worn; nor any white colour in doublets or hosen, nor any facing of velvet in gowns, but by such as were of the Bench; that no gentleman should walk in the streets in their cloaks but in gowns; that no hat or long or curled hair be worn; nor any gowns but such as were of a sad colour.

Buildings.

Gate-house.

Of the buildings, the Middle Temple Gate from Fleet-street had a curious history attached to it. Wolsey, when a young man and Fellow of Magdalen College, Oxford, was Tutor to the sons of the Marquess of Dorset. That nobleman presented him with the Living of Lymington; and tradition says, that the embryo Cardinal, having drunk to excess at a neighbouring Fair, was put in the stocks for disorderly conduct, by Sir Amyas Pawlet, a magistrate dwelling thereabouts. The cause assigned rests on no earlier or better authority than that of Sir John Harrington. Thus much, however, is certain, that Wolsey was put in the stocks, and that he cherished a bitter remembrance of the dishonour; for Cavendish informs us that "when the Schoolmaster mounted the dignity to be Chancellor of England he was not oblivious of the old displeasure ministered unto him by Master Pawlet, but sent for him, and after

many sharp and heinous words, enjoined him to attend upon the Council until he were by them dismissed, and not to depart without licence, upon an urgent pain and forfeiture. So that he continued within the Middle Temple the space of five or six years or more whose lodging there was in the Gate-house next the street, which he reedified very sumptuously, garnishing the same, on the outside thereof, with Cardinal's hats and arms, badges and cognisaunces of the Cardinal, with divers other devices in so glorious a sort that he thought thereby to have appeased his old unkind displeasure." (Singer's Ed. 1825, l. 7.) This gate having been destroyed during the fire of London was rebuilt by the Society in 1684.

The Hall is a noble room, built between the years 1562—72. Its dimensions are, length including the passage 100 feet, breadth 44, height 60. The roof is finely timbered, and the windows crowded with armorial painted glass. Among the pictures is a well-known portrait of Charles I. attended either by the Duke d'Epemon, or M. de St. Antoine, (Equerry to the King of France,) by Vandyke; and the remaining Sovereigns in succession to George II. The Church, which is common to both Societies of the Temple, is one of the few in England with a circular Western tower; and the body presents a beautiful specimen of the early pointed style. It was founded in the reign of Henry II., and consecrated by Heraclius, Patriarch of Jerusalem, A. D. 1185, as an inscription in Saxon characters records over the Western porch. The Western tower contains eleven tombs usually assigned to Knight Templars; eight of them have monumental effigies, of which five are cross-legged: the only one certainly known is that of Geoffry de Magnaville, created Earl of Essex in 1148. They are well engraved, and described in Gough's *Sepulchral Monuments*. Paul Hentzner gravely affirms that under the round tower, which was "added" to the Church, "lie buried three Kings of Denmark who reigned in England." With equal correctness he states that "in these Colleges (the Inns of Court) numbers of the young nobility, gentry, and others are educated, and chiefly in the study of Physic." *Travels*, 31. Many eminent Lawyers have monuments in this Church; among them Plowden and Selden. The Minister, termed *Master* or *Custos*, is appointed without Institution or Induction by Letters Patent. The organ is among the finest in England.

Of the two Inns of Chancery belonging to the Middle Temple, *Strand Inn* or *Chester Inn* has long ceased to exist. It was pulled down in 1594, when the Protector Somerset was constructing his Palace, and the Students were transferred to *New Inn*, nearly opposite, and adjoining Clement's Inn on the West. In 1485, the site of New Inn was occupied by a Hostery for Travellers, called our Lady's Inn, and Dugdale informs us that "it became first an Hostell for Students of the Law, upon their removal from an old Inn of Chancery situate in Seacole-lane, a little South from Sepulchre's Church, called St. George's Inn:" a part of this most ancient Inn may still be seen in the remains of a stone wall in *Bishop's* and *Green Arbour Courts*, at the back of the *Old Bailey*. New Inn was governed by a Treasurer and twelve Ancients. The present buildings are all of modern date.

Lincoln's Inn, on the West of Chancery or Chancellour's Lane, was once the site of a Monastery of Black Friars, and of a Palace of Richard Neville, Bishop of Chichester

and Lord Chancellor in the reign of Henry III, the memory of which Palace is still preserved in the adjoining *Bishop's Court* and *Chichester Rents*. The present name is derived from Henry Lacy, Earl of Lincoln, to whom the Friary was granted by Edward I., and who is said traditionally, being a person well affected to the knowledge of the Laws, to have first brought in thither the Professors of that honourable and necessary study. The Bishops of Chichester also afterwards leased their mansion in like manner; till in the 22 Elizabeth it was formally conveyed to the Benchers.

Orders.

Decency in apparel, as Dugdale terms it, was as carefully provided for in this Inn as we have already shown it to have been in the Temple. At a Council held on the Day of Nativity of St. John Baptist, 23 Henry VIII., it was ordered that "for a continual rule to be thenceforth kept in this House, no Gentleman, being a fellow of this House, should wear any cut or pansid hose, or bryches, or pansid doublet, upon pain of putting out of the House." In 1 Philip and Mary, one Mr. Wyde of this House was fined five groats, for going in his study-gown in Cheapside on a Sunday, about ten of the clock before noon, and in Westminster Hall in Term-time in the forenoon. In 30 Elizabeth, wearing any hat in Hall or Chapel, or going abroad to London or Westminster without a gown, were punished by fine and loss of commons. So also a fine was inflicted on long hair and great ruffs, cloaks, boots, and spurs. Great war was waged against beards. In 33 Henry VIII. it was ordered that none of the fellows of the House being in commons, or at his repast, should wear a beard; and whoso did, to pay double commons or repasts during such time as he should have any beard: under each of the sister Queens who succeeded, these penalties were enhanced. In 1 Mary, every one who had a beard was enjoined to pay 12d. for every meal he continued therein, and every man was to be shaven on pain of being put out of commons. In 1 Elizabeth, it was further ordered that no fellow of this House should wear any beard above a fortnight's growth, and that whoso transgress therein should for the first offence forfeit 3s. 4d., to be paid and cast with his commons, for the second offence double, for the third be banished the House. But—*tanta est insania barbæ*—all these severe inflictions (which the reader will observe were chiefly founded on the *argumentum ad intestina*) proved useless, and in the very next year a solemn Council found it necessary to rescind and repeal the former Orders. Swords, bucklers, and rapiers were prohibited under Elizabeth, and again, more in accordance with the taste of the Monarch, under her successor; and this petty tyranny lasted even as late as the 11 Charles I., when it was ordered that what Gentleman soever should come into the Hall at meal-time with any other upper garment than a gown, he should be suspended from being a member of the Society.

Revels.

In their solemnities, the students of Lincoln's Inn were by no means behind their brethren. Each of the four Inns, by the King's mandate, furnished four armed men for the Royal Guard at the Justs in Smithfield, 7 Edward IV., between Wydeville, Lord Scales, and the Bastard of Burgundy. The Society of Lincoln's Inn expended 20s. in claret, and £5 in scaffolds at the Coronation of Henry VIII. In 11 James I. it presented the King with a Masque in honour of the nuptials of his daughter, the Lady Elizabeth, with the Elector Palatine, the cost of which amounted to £1086. 8s. 11d.

VOL. XXIII.

It raised a liberal subscription for assisting at the barriers on the creation of Charles, Prince of Wales; and, above all, the first motion of that splendid Masque, which we have described from Whitelock, proceeded from this honourable Body unto the other three Inns. We pass by the more ordinary Revels, in the exaction of which, nevertheless, it may be remarked that the Benchers were severe: for by an Order, 6 Feb. 7 Jac., it appears that the Under Barristers were by decimation put out of commons for example's sake, because the whole Bar offended by not dancing on Candlemas day preceding, according to the ancient Order of this Society, when the Judges were present; with this, that if the like fault were committed afterwards, they should be fined or disbarred. So, too, in their Grand Christmasses it was agreed in 9 Henry VIII. that the King of Cockneys on Childermas day should sit and have due service; but that Jack Straw (alas! for his less happy lot) and all his adherents should be thenceforth utterly banished, and no more be used in this House upon pain to forfeit for every time £5, to be levied on every fellow happening to offend against this rule.

INNS OF COURT.

The present Hall of Lincoln's Inn was built upon the site of one more ancient in 1508, but it has frequently undergone modernization. It is used not only for the Commons of the Society, but for the Lord Chancellor's sittings out of Term. At its upper end is Hogarth's well-known picture of Paul before Felix. The Chapel, a very beautiful room of bastard Gothic, is a work of Inigo Jones. The Terrace Walk in the Garden was constructed in 1663, and looks into the magnificent square, which was designed, but not finished, by the great Architect just named; and in its construction it is believed that Ben Jonson, whose father was a bricklayer, worked in that humble capacity. Fuller (*Worthies*, ii. 112. Ed. 1811.) records the fact, which is by no means improbable. Some of Inigo Jones's houses yet remain there, among them a mansion of the Earls of Lindsey, and of their descendants the Dukes of Ancaster. The small, but most elegant, Corinthian column which once was a fountain in the New Square, was from the same hand, and formed one of its chief decorations, till some recent utilitarian Treasurer dislodged it, and substituted a cast-iron gas-light pipe instead. The venerable gateway into Chancery Lane was finished in 1518, chiefly at the charge of Sir Thomas Lovell, (whose arms it bears on the sinister of those of England, on the side towards the street,) a member of the Society, and Treasurer to Henry VIII. The *Stone Buildings* form part of a design of Sir Robert Taylor for rebuilding the whole Inn, which was never completed. Some chambers in these contain the Library of the Society.

Buildings.

To Lincoln's Inn are appended two Inns of Chancery. *Furnival's Inn*, once belonging to a noble family of that name, extinct in the male line 6 Richard II., and demised by some of its representatives to Law students, as appears by the standing accounts of the Society, not later than 9 Henry IV. It was conveyed to the Benchers of Lincoln's Inn 1 Edward VI., and by them leased to the resident Barristers. This Inn occupies a large space in Holborn, between Brook Street and Leather Lane. Within the few last years it has been entirely rebuilt.

Furnival's Inn.

Thavie's or *Thaive's Inn*, another Inn of Chancery belonging to Lincoln's Inn, dates from a time not later than the reign of Edward III., when John Taive

Thavie's Inn

INNS OF COURT.

directed, *totum illud hospicium in quo apprenticii ad Legem habitare solebant*, to be sold after his wife's decease, to maintain a Chaplain for the benefit of both their souls. It was devised to the Benchers of Lincoln's Inn in 4 Edward VI., and by them leased in like manner as Furnival's Inn; but having been burned down, it now forms a private Court adjoining the Church of St. Andrew, Holborn.

Gray's Inn.

Gray's Inn, on the North side of Holborn, nearly opposite Chancery Lane, was the residence of the Lords Gray de Wilton. It is said to have been leased by that family to Law Students in Edward III.'s time; and it is certain that it was demised to them afterwards by the Prior and Convent of Sheen, who had purchased it from Lord Gray. At the Dissolution it was granted by the Crown in fee farm.

Orders.

The Orders of this House relative to apparel, &c. differ but little from some of those which we have already cited. Of the rude license of the time of Elizabeth one specimen may be accepted from an Order made in the 28th of her reign, that no Gentleman of this Society, nor any other, by the appointment, choice, or assent of any Gentleman of this House, should in time of Christmas, or any other time, take upon him or use the name, place, or commandment of Lord (of Misrule) or any other like, or *break open any chamber, or disorderly molest or abuse* any fellows or officers of this House, within the precinct of the same, upon pain to be expelled for the abuse or disorder against any such fellow, and being put out of commons for abuse of any officer. An especial regard for the morals of the House is exhibited in another contemporaneous Order; that no laundresses, nor women called *victuallers*, should thenceforth come into the Gentlemen's chambers of this Society unless they were full forty years of age, nor send their maid-servants, of what age soever, into the said Gentlemen's chambers: upon penalty, for the first offence of him that should admit of any such, to be put out of commons; for the second to be expelled the House. Perhaps this regulation was the more necessary in consequence of another, which enjoined that no officer of this House should keep or enjoy his office longer than he shall keep himself sole and unmarried, excepting the steward, the chief butler, and the chief cook. Besides these, we read that search is to be made for lewd and dangerous persons, and that no such be suffered to lodge in the House; that no fellow of the Society is to come into Hall for commons, exercises, or pension, without his gown, or with his hat on his head, nor to stand with his back to the fire, nor to make any rude noise.

Buildings.

The Gardens of this Society were planted about the 40th of Elizabeth, in the Treasurership of the great (afterwards) Lord Bacon, who allowed £7. 6s. 8d. for planting elm-trees. The present buildings for the most part are modern. The Hall, however, is as early as the reign of Queen Mary. The Chapel stands on the site of an older Chapel of Portpole, (the name of the manor,) founded in 8th Edward II. for the benefit of the soul of John, son of Reginald de Gray.

Staple's Inn.

Staple's Inn and *Bernard's Inn* are Inns of Chancery belonging to Gray's Inn. The first is said to have been the Staple Hall of the Wool-merchants or Staplers, but it was held by Law Students in the reign of Henry V. It stands on the South of Holborn, nearly opposite Gray's Inn Lane, and much of it, perhaps, is of as early date as the time of Elizabeth. *Bernard's Inn*, anciently *Mackworth's Inn*, was given by the executors of John Mack-

Bernard's Inn.

worth, Dean of Lincoln, 32 Henry VI., to the Dean and Chapter of that Cathedral, to find a chaplain to celebrate service in their Chapel of St. George, wherein the aforesaid Dean lies buried. Its government was vested in a Principal and twelve Ancients. The present buildings are of recent date, and stand on the South of Holborn, to the North-West of Fetter Lane.

INNS OF COURT.

Besides these Inns of Court and Chancery, three Inns have belonged from very early times to the Judges and Sergeants at Law. Two of these still remain, *Sergeants' Inn in Chancery Lane*, which before the year 1484 was called *Faryngdon's Inn in Chancellor's Lane*, and belonged to the Bishops of Ely. But yet earlier, about 1411, it had been let to the Sergeants at Law. The whole of the buildings now existing are of modern date; and the Inn is chiefly known as being that in which the Judges, pent in small and ruinous chambers, fulfil the laborious duties which fall to them out of Court. *Sergeants' Inn in Fleet Street* adjoins the North-East corner of the Temple, and was a residence for Law Students at least as early as the reign of Henry VI. It was burned during the fire of London, and rebuilt by a voluntary subscription of Sergeants. It is no longer frequented as an Inn of Chancery. *Scroope's Inn*, once a house of the Lords Scroope of Bolton, was used by Sergeants at Law in the reign of Richard III. It stood on Holborn Hill, opposite St. Andrew's Church, on a site which still bears the name of Scroope's Court.

It may be convenient to conclude this account of the Inns of Court with a brief notice of the *Liberty of the Rolls*, which stands on the East side of Fetter Lane. On the site occupied by the present buildings once stood an Hospital, founded by Henry III. for the reception of converted Jews; who, in 1377, in consequence of a Royal mandate, gave way, and surrendered their House to the purpose for which it is still applied, the preservation of Chancery Rolls, which are kept in presses in the Chapel designed by Inigo Jones. The interior of the Chapel was fitted up in good taste and at great expense while the late Sir Thomas Plumer was Master. The Master has an excellent House, which contains his Court, adjoining the Chapel.

In D. Lupton's quaint and amusing Tract, *London and the Countrey carbonadoed and quartered into several Characters*, 1632, reprinted in *Park's Supplement to the Harleian Miscellany*, i. 324. is the following estimate of "The Inns of Court and Chancery. These were builded for profit, grace, pleasure, justice: the buildings grace the city, the men grace the buildings, justice and learning grace the men. These places furnish our land with Law: here Nobility, Learning, Law, Gentry, have their residence: here are Students and Professors; here are Students that will not be Professors; here are Professors and Students; here are Professors not yet Students, and here be some that are neither Students nor Professors. Many hold that for an excellent custom in the Temple, immunity from danger of Sergeants or such like prowling vermin.* Some live here for profit, others for grace, some for pleasure, some for all; yet most for profit and pleasure. They that mean to live by Law desire not so much the theory as the practical part. Though many here follow

the Law, yet all keep it not, but some transgress. They are the seminaries of judgment and justice: he that is the most expert in the Law is the most fitting for public employment and the magistracy: these cause Cæsar to have his due, and give the subject his right. That land is likely to flourish where Religion and Justice are honoured and practised: take away Justice, and Religion will halt: remove Religion, and Justice will degenerate into Tyranny. Let Moses and Aaron rule, and our Israel will prosper. These places moralize, civilize the younger, advance the learned; their founders intended the stablishing of peace and confirming of Religion. Many things that begin with blows and would end in blood, are by these Professors mediated and Christian agreement made: their number, unity, and great employment makes them admired. To conclude, they are rich magazines for Law, store-houses for Policy, bulwarks of Equity. Let them ever flourish, as long as they are *Deo, Regi, Patriæ*, for God, their King, and Country."

Present
mode of ad-
mission to
an Inn of
Court.

At the present day, previously to being called to the Bar, it is necessary to be admitted a member of one of the Inns of Court. The regulations of Lincoln's Inn, to which those of the other Inns bear a strong resemblance, are alone given in the following account. The applicant for admission need not be present; but the application may be made through the medium of a third person. The applicant must be recommended to the Society by one of its members or by two housekeepers, who are required to certify that they know the applicant to be a proper person for admission. A Bond must also be entered into by the applicant himself and the recommending member or housekeepers, in the sum of £100, conditioned for the due payment of his fees to the Society. The fees are generally more than £6 and less than £8 a year. The expense of admission in the year 1827 amounted to £31. 16s. Before the Student commences keeping his Terms for the English Bar, he must deposit with the Society the sum of £100, which is returned without interest if the Student die, or quit the Society, or be called to the Bar. No deposit is required from those who can produce a certificate of having kept two years' Terms in the Universities of Oxford, Cambridge, or Dublin, or of being of the Faculty of Advocates in Scotland, nor from those who are admitted merely for the purpose of being called to the Irish Bar. Persons removing from one Inn to another are allowed the Terms which they have kept in their

original Inns. A Term is kept by the Student being present at five dinners during the Term; three dinners suffice for three quarters of a Term; one dinner during the Grand Week for half a Term. The Student must keep twelve Terms (sixty dinners) before he can be called to the Bar, and his name must have been five years on the books, unless he produces a certificate of having taken the degree of Master of Arts or Bachelor of Law at Oxford, Cambridge, or Dublin, in which case three years will suffice. He must also have gone through a certain ceremony, which is called performing an Exercise, nine times. Exercises are performed thus: the Student is furnished by the Steward of the Society with a piece of paper, on which is supposed to be written an argument on some point of Law, but owing to the negligence of successive copyists, the writing now consists of a piece of legal jargon, wholly unintelligible. When after-dinner grace has been said, the Student advances to the Barristers' Table, and commences reading from this paper, upon which one of the senior Barristers present makes him a slight bow, takes the paper from him, and tells him that it is quite sufficient. Students intended for the Irish Bar keep eight Terms in London, and the remainder in Ireland. When the twelve Terms have been kept, and the nine Exercises performed, the Student may petition the Benchers to call him to the Bar. Except under very peculiar circumstances, the petition is granted as a matter of course. After dinner on the day appointed for the call the Student is required to take certain oaths. He then retires with the Benchers to the Council Chamber, which adjoins the Hall, to sign the Register of his call. There are certain oaths to be taken in the Courts of Westminster Hall. These should be taken within six months after the call. No Attorney, Solicitor, Clerk in Chancery or the Exchequer, unless he has discontinued practice for two years in such branches of the profession, and no person who is in Deacon's Orders, or under twenty-one years of age, can be called. The expense of being called is between £90 and £100. The line of study to be recommended to the Student must depend entirely on the branch of the profession in which he purposes to practise. The three years during which he is keeping Terms should be spent in the chambers of a Conveyancer, an Equity Draftsman, or a Special Pleader; and the first of the three should, in our opinion, be invariably passed with a Conveyancer. The usual fee for a year is one hundred guineas.

It is an established opinion amongst some men, that there are in
the understanding certain innate principles; some primary notions,
νοηταί έννοιαι, characters, as it were, stamped upon the mind of man,
which the soul receives in its very first being, and brings into the
world with it. It would be sufficient to convince unprejudiced
readers of the falseness of this supposition, if I should only shew (as
I hope I shall in the following parts of this discourse) how men,
barely by the use of their natural faculties, may attain to all the
knowledge they have, without the help of any innate impressions;
and may arrive at certainty, without any such original notions or
principles.

INNUENDO, in Law. In an action for a written libel or for verbal slander, if the offensive words are not in themselves sufficiently intelligible, or if, without explanation, their libellous or slanderous tendency does not appear, it is usual for the plaintiff in his declaration, which is the written statement of his complaint, to insert parenthetically into the body of the libel the necessary explanation. As for instance, "He (meaning the said plaintiff) is forsworn, (meaning that he had per

injured himself in prosecuting the said defendant.) "These parenthetical comments are called Innuendoes, and they have that name because the Latin word *innuendo* was always used formerly when the pleadings were in Latin, where the word "meaning" is used at present. The general rule with regard to Innuendoes is, that they must be merely explanatory, introducing no new matter, but referring only to something which has been previously mentioned. Thus in the instance put above the Innuendo would be bad, unless the plaintiff in the previous part of his declaration had stated the fact of his having prosecuted the defendant. But supposing that the prosecution be previously mentioned, then the Innuendo only explains the meaning of the libellous words by showing that they refer to that particular prosecution.

genus are *Inoceramus concentricus*, (Sowerby, *Mem. Conch.*, pl. 305, fig. 1—6.) and *I. Sulcatus*, (pl. 306, fig. 1—7.) both found in the blue clay at Sandgate. Mr. Sowerby has also described a very large species found attached to flints in chalk; fragments of this shell form the peculiar white fibrous spots which are often found imbedded in flint stones. Brongniart has re-examined the species of this genus, and has divided it into two; the first containing those which are of a laminar structure like the oyster, for which he retains the name of *Inoceramus*, forgetting that this word implies fibrous shell, and gives the name of *Cutilus* to those which are of a fibrous structure. These shells are most nearly allied to the genus *Perna*, but differ from it in being more ventricose, and in the umbones being more prominent. The fossil species, *Perna Truncii*, has part of these characters.

*culat*ion for the small-pox was introduced to this Coun-
try under the name of *Ingrafting*. See INGRAFF, the
Quotation from Lady M. W. Montague.

To insert or introduce an eye, a bud, or graft; to in-
graft; generally, to insert, to introduce; to infect.

There is a way to graffe hearbs also as well as trees, namely, by
cutting off the yong sions that spring out of the stalke, and therein to
inoculate as it were the seed of another plant, within the pith or
marow thereof.

INODIATE, It. *inodiare*, to hate. From the Lat.
odium, hatred, from *odisse*, to hate. As used by South,
'whose word it appears to be,)

To cause a *hatred* of, to bring into *hatred* or dislike.

For those of the ancients members of her communion who have
all along owned and contended for a strict conformity of her rules
and sanctions, as the surest course to establish her, have been so late
represented, or rather reprobated under the *inodiating* character of
high churchmen.

upon the sense of smelling.

Whites are more *inodorate* (for the most part) than flowers of the
same kind coloured; as is found in single white violets, white rose,
white gilly-flowers, white stock-gilly-flowers, &c. We find also, that
blossoms of trees that are white, are commonly *inodorate*; as cherries,
peares, plums.

INQUISITION.

Origin.

The precise year of the foundation of the *Holy Office*,
or as that fearful Tribunal is better known, the *INQUISITION*, is variously assigned between 1208 and 1215.
But all authorities attribute its origin to the Papacy of
Innocent III. The immediate cause of its institution
was the firm and persevering resistance offered by the
Albigenses to the tyranny of the Romish Church; and
its objects are laid down so clearly and so boldly by the

Abbé Marsollier, (*Hist. del Inq.* liv. ii.) that we shall
very closely borrow his statement of them.

Innocent perceived that however much the Albigenses might apparently be subdued by open force, there never
would be wanting numbers to make a secret profes-
sion of doctrine which no existing authority could reach.
He projected, therefore, as a remedy against this and all
other secessions from his spiritual dominion, a Juris-

TION.

diction which should apply itself particularly to the detection, the punishment, and the extermination of Heresy. The qualities required in the Members by whom such a Court should be composed, appeared to be an entire dependence upon Rome, and an absolute devotion to her interests; a leisure undistracted by other cares; a condition in Society so little elevated, that their chief honour might be derived from their new employment; a freedom from the ordinary bonds of life, which might otherwise, through the various channels of consanguinity or friendship, be supposed to interfere with public duty; hardness of purpose, inflexibility, sternness, rejection of pity; a burning zeal, which might esteem Persecution for the Faith's sake the chief of Religious duties; a sufficient dash of learning; and, above all, a strong bias, it mattered not from what motive it might arise, against all Heresy.

The Domi-
nicians.

The Bishops, to whom hitherto all Ecclesiastical Causes had been referred, did not satisfy the views of Innocent on these points; and he looked with an eye of anxious hope to the extraordinary Body of men which had recently been organized by Dominic of Cabaroga. He found in this Society an unbounded attachment to the Papacy. The solitude and retirement professed by its members, but which were ill adapted to the ardent spirits which for the most part animated them, gave promise of time adequate to the extent and labour of the task proposed, and of a most willing activity as soon as they should be permitted to exercise their now slumbering powers. The poverty which they had vowed, and the public mendicity to which they were expressly bound, rendered the charge which awaited them a splendid object of ambition. They had already renounced their families, their names, connections, and alliances; and one of their chief boasts was a more than Stoical indifference to natural and Civil ties. The austerity of their Rule, and the privations and severe discipline exercised upon themselves, encouraged a reasonable belief that the claims of others would not be regarded with greater tenderness than they were used to exhibit to their own. As a new created Body they abounded in zeal; for their Age they were learned; that is, they were profoundly versed in Scholastic subtilties and in the Canon Law. Moreover, they had an interest greater than common in the destruction of the reigning Heretics, by whom they were especially noted as marks for public obloquy, and who spared no pains to hold them up to popular reprehension.

With such materials at hand, their employment was easily arranged. Missionaries, as they were at first gently termed, were despatched into Provence and Languedoc; and Lombardy, Romagna, and the March of Ancona were visited by Dominican emissaries. Rainier, or Raoul, and Pierre de Castelnau, both Cister-tians, are joined with Dominic as the first who received the charge: and for the association with them of Minorites, who were much employed in these services, a most satisfactory reason, when we call to mind their proceedings, is given by an old writer whom Du Cange has cited,—*qui Prædicatorum rigorem mansuetudine sua temperarent.* (Guillelmus de Podio-Laurentii, c. 40.)

First Inqui-
sitors.

The professed object of these *Inquisitors*, for they soon obtained that title, was, as the name implied, to *inquire* into the Faith of those among whom they were sent. By preaching and instruction they were to labour for the conversion of Heretics. They were to exhort Princes and Civil Magistrates to exercise the Laws upon

stubborn recusants; to register carefully their number and qualities; to observe and stimulate the Bishops in their Episcopal duties; and, above all, to forward information on each of these points to Rome, for the inspection and final judgment of the Pope, who was to be considered the prime mover of this great machinery.

INQUI-
TION.Inquisition
of Tou-
louse.

Such were the seeds of the Holy Office. Toulouse was the first abode in which a formal Tribunal was erected by Gregory IX. in 1229. It was in these territories that the Albigenses were most formidable, and Raymond VII., the reigning Count, was compelled, after a long and ineffectual struggle, to assist in their suppression. But the Inquisitors were unfavourably received by the populace; they were soon expelled from the city, and, on their return, in the end, were massacred. Among the slain was numbered Pierre de Castelnau, the Prot-Inquisitor. Raymond severely punished the insurrectionists: and during the reign of his successor, Alfonso, from 1249 to 1271, the Holy Office existed in Toulouse with full powers. The decrease of the Albigenses gradually diminished the occupation of the Inquisitors, and their credit appears to have decayed together with their activity. Zeal was not wanting to display itself by occasional bursts of persecution; but in most instances it was exhibited unseasonably, and contributed little to revive the obsolete authority of the Tribunal; so that, on the annexation of this Province to the Crown of France, the Inquisition retained little more than a nominal existence. Even the annual inspection of the names of those persons selected for the magistracy, (*les Capitouls*), in order to prevent the appointment of any one suspected of Heresy, (a privilege which had been accorded to the Inquisitors on their first establishment, and which they had continued to preserve after the extinction of their real power,) was taken away in 1646, and transferred to the Archbishop of Toulouse. The only remnant of the Holy Office in that City is a Dominican Convent, which still bears the name of the Inquisition, because it was of old the residence of the Grand Inquisitor.

Under Innocent IV. all Italy, except Naples and Venice, of which we shall have occasion to speak more fully by and by, had received the yoke of the new Judges. The opposition which arose from Naples, and which, even to the present day, has prevented the establishment of an Inquisition within that Kingdom, might naturally be anticipated from the never-ceasing dissensions between the Popes and the Neapolitan Princes. Even when the Spanish influence had secured Naples to itself, a singular reason continued to form a bar against the introduction of the Holy Office, by that Power which elsewhere had evinced itself the most ardent of its supporters. The Court of Madrid contended that the Inquisitors of Naples, if appointed, should depend, not upon the *Congregation* at Rome, which swayed all the other Inquisitions of Italy, but upon their own Grand Inquisitor; and to such an arrangement, with so near and so restless a neighbour, it was the obvious policy of the Vatican to refuse assent. Hence, although the Pope has occasionally sent Commissaries to decide on charges of Heresy in Naples, even in these rare cases, his Ministers have not been allowed to act without permission of the Viceroy; and the cognizance of crimes against Religion has remained in possession of the Neapolitan Bishops undisturbed by Inquisitors. An attempt which was made in the reign of Charles V. by his Viceroy, Don Pedro of Toledo, to establish the Holy

Office in form, led to an insurrection in 1544, which cost the lives of many Spaniards; and had it not been for the timely abandonment of the project, would have transferred the Crown itself to a French dynasty. The experiment has not since been renewed. For their other possessions, Milan, while under the Spanish yoke, was subordinate to the Inquisition of Rome, upon which it depended before its subjection; and Sicily and Sardinia, which had been free from the Tribunal till their union with Spain, felt no reluctance to receive an Inquisition from Madrid. In the Low Countries, the resistance maintained against the establishment of the Inquisition forms the most distinguished period of their History. The Edict published by Charles V. for its introduction was rendered abortive by the sagacity of his sister Mary, Queen of Hungary; who, in her administration of these Provinces, well knew that the curtailment of their Religious privileges would be the prelude to commercial extinction, by the expatriation of their merchants. Charles, therefore, first qualified his Edict by restricting its application to strangers, and modifying it as it affected the natives; and in the end he abandoned it altogether. The contrary policy, which was suggested by the unhappy bigotry of his son and successor, who endeavoured to form in the Netherlands as rigorous an Inquisition as he found existing in Spain, led to a war which raged more than sixty years, and which, after costing the best blood and treasure of the Mother Country, and desolating the most profitable of her dominions, ended, after various fortune, in the entire overthrow of her power in the Netherlands, and the establishment of independence by the Seven United Provinces.

Venice.

In the State of Venice, the Inquisition was introduced about a century after its first establishment; but the wary Government of that Republic took especial pains to prevent this foreign jurisdiction from attaining any power which might endanger its own: and the immunities of temporal dominion were carefully preserved from the inroads of Ecclesiastical ambition. From the middle of the XIIIth century till 1289, ten Popes, by repeated Bulls, pressed the full acceptance of this Tribunal upon the Venetians, but they could obtain no further admission than that secular Judges should be appointed to receive denunciations against Heresy; that these Judges should refer the examination of such doctrines as were suspected of error to Theologians, who might report upon them; but that, in the end, the Civil magistrates should both find the verdict and pronounce the sentence. In the year which we have last mentioned, a final Concordat was arranged between the Doge, Giovanni Dandolo and Pope Nicolas IV., and the provisions which it contained formed the future basis of the Venetian Inquisition. This Tribunal, in the Capital, was to consist of the Papal Nuncio, the Bishop of Venice, and another Ecclesiastic; but the two latter could not act without the sanction of the Doge. In the Provinces, the Pope, in like manner, had the barren privilege of nomination; but his nominees were powerless if the Doge enforced his veto. Three Senators in Venice, three Magistrates in the Provinces, completed the Inquisitorial band; and without their presence all proceedings were absolutely null. They might suspend the deliberations, and prohibit the execution of the sentences of their Court, if they judged them contrary to the interests of the Republic. Secrecy, the boasted master-engine of the Institution, was here deprived of

its chief efficacy as strengthening the Pontifical arm; for the assistants were sworn to reveal all proceedings to the Senate, and no appeal or evocation to Rome was permitted. Heresy was the sole offence cognizable by the Inquisitors. The Jews established in the Venetian territories were freed from their grasp, for it was plausibly argued that Church authority could not extend beyond the members of the Church. So, too, with the Greeks, it was unjust that Rome should be judge in her own cause. Bigamists could not have offended against a Sacrament, for the second marriage being void was no more than an infraction of the Civil code. Blasphemers, Usurers, and Sorcerers, provided these last had not abused holy ordinances, were preserved equally harmless. Even with condemned offenders, property reverted to their heirs, so that the great stimulus of confiscation was wanting to avarice. Books, before the invention of Printing, could not alarm Ecclesiastical jealousy; but even after that discovery, the tyranny of the Press was committed entirely to the vigilance of the Civil Magistrates. All offences of Priests were submitted to the Secular Judge, and even the funds of the Inquisition were managed by a Venetian Treasurer, and inspected and controuled by the Senate. Such were the chief barriers which Rome, notwithstanding her repeated attempts, was never able to pass. The reader who seeks for more minute particulars may find them in the IIIrd Part of Marsollier's *Histoire des Inquisitions*, where the good Abbé has translated very faithfully, but without acknowledgment, the *Historia dell' Inquisitioni, è particolarmente della Veneta*, of Fra Paolo. (Daru, *Hist. de Venise*, v. 24.)

We need scarcely state the causes which, before the Reformation, preserved our own Country from the inroads of the Inquisition. Such a Court was in all days most alien from the genius of the People. By those who showed themselves impatient of control even from their own domestic Government, while it retained the slightest residue of oppression, and who never ceased to resist the hand of native power if it bore too heavily, it was not likely that the pretensions of a stranger would be less reluctantly admitted. But this is not the place in which we are to trace our Church History, and we shall content ourselves with citing the very striking and most satisfactory remark of Marsollier, that the Popes abandoned their unavailing attempts upon our spiritual liberties with the most bitter regret; a regret enhanced by the recollection *que les Anglois étans de toutes les nations celle qui aime le plus à parler en public et à dogmatiser, l'on étoit persuadé qu'elle en avoit plus de besoin*. Perhaps, indeed, the words of Paramo, himself an Inquisitor, are yet more to the purpose. *In Angliâ, Scotiâ, atque Hiberniâ, nulla sunt Inquisitionis vestigia. Imò in Vitâ Cardinalis Poli innuitur, ante infelicem illarum Insularum casum judices sæculares crimen Hæreseos castigare solitos; quod forsitan magna potuit esse occasio, ut in tam miseros laberentur errores.* (de Orig. S. Inq. ii. 24.)

Neither in France nor in Germany did the Inquisition ever obtain more than partial and temporary establishment. The long struggle between the Popes and the Emperors, and the dawn of the Reformation in the German States, were sufficient obstacles against the submission of their Princes to a permanent spiritual yoke from a foreign power; and the Gallican Church (notwithstanding the early example of Toulouse) has, on all occasions, maintained an independence of external

control, which, even when it has been the false policy of the Sovereign to encourage Religious persecution, has declined placing the weapons of offence in any hands but its own.

In this manner, but a few years after the first institution of the Tribunal, an Inquisitor, who had established himself in France, was recalled and punished, though by no means according to his deserts. History records few names more atrociously distinguished than that of Robert the Bulgarian. This Dominican, who had become a pretended convert from the execrable sect whose title he justly continued to bear, was thought on that account especially fitted to detect his former companions, *quapropter*, says Matthew Paris, *omnes eorum complices noverat, et factus est eorum accusator, malleus et inimicus familiaris.* (ad ann. 1238.) In less than three, we believe than two months, he burned or buried alive about fifty of his ancient comrades of both sexes, (*id. ad ann. 1236.*) till after having imposed both upon the Pope and the King, Louis IX., for nearly six years, his hypocrisy was discovered, and his enormities consigned him to perpetual imprisonment.

Philip IV. 1302.

For the three succeeding centuries, the Inquisition, even in those times and places at which it existed at all in France, possessed very moderate powers. As early as 1302, Philip IV. regulated the abuses which continued to be exercised at Toulouse, by associating the Bishop in all cases of inquiry with the Inquisitor, and not permitting the latter to act unless the two accorded. His wise and humane words are well worthy of permanent record. *Nous ne scaurions souffrir que la vie et la mort de nos sujets dépendent du caprice et de la fantaisie d'une seule personne, quelquefois peu instruite, souvent aveuglée par la passion.* (Velly, iv. 105.) In the reign of Henry II., in 1555, the formal establishment of the Inquisition, on the same footing as in Spain and Italy, was proposed by the Cardinal of Lorraine. Garnier has given at great length the powerful remonstrance offered by the President Seguier to the King, when an Edict to this effect was brought to him to be registered. After many sound arguments, he assured the Ministers, in conclusion, of a truth which admits but little doubt: *il ne s'agira plus que de s'assurer d'un Inquisiteur et de deux témoins, et fussiez-vous des Saints, vous serez brûlés comme Hérétiques.* Nevertheless, three years afterwards, an Inquisition, in accordance with that of Rome, was erected in France under a Bull of Paul IV.

1558.

But even here the Parliament interfered with a salutary check, by carefully distinguishing between Laics and Ecclesiastics. The latter were unreservedly left to the cognizance of the Inquisitorial Court; but against the former the Inquisition had no further power than that of instituting a Process and declaring the accused to be Heretics; for all the rest they were left to the Civil Judges. The times, however, were too turbulent, and the Reformed doctrine was too powerfully advocated in France, to allow of the quiet imposition of this detestable yoke. Accordingly, not two years after the Papal Bull of establishment, we find the Cardinal of Lorraine once more complaining of the inefficiency of the Court, and earnestly pressing the entire adoption of the Spanish model. He was dexterously met by the Chancellor l'Hopital, who knowing that there would be a majority against him in the Cabinet, if he openly opposed the measure, admitted its advantages if seasonably applied, but argued that at such a moment the very name would create a revolt. He succeeded in stopping the progress

1560.

of the Inquisition, and substituted in its stead the provisions of an Ordinance well known in French History under the name of *L'Edit de Romorentin*.

It was in the Western Peninsula of Europe that the Inquisition fixed and has ever maintained its strongest hold; and it is therefore to the establishments of Spain and Portugal that we shall principally direct our attention. The Arragonese, from the first, admitted this Tribunal in all their dependencies; but it was not till the union of the two Crowns under Ferdinand and Isabella that the rest of Spain surrendered its freedom. Each of these Royal personages sought a refuge from unhappiness in Bigotry. Ferdinand endeavoured to make compensation for crime, Isabella to assuage affliction; and the Priests were at hand to profit both by the stricken conscience and the wounded heart.

The year 1481 may, therefore, be considered as the epoch of the establishment of the Spanish Inquisition, and its first edict was issued from the Dominican Convent of St. Paul at Seville. Its activity was chiefly directed against Jews, Mohammedans, and those unhappy offsets from them, who, having been baptized, were, nevertheless, suspected of attachment to their ancient Faith; and under the stigma of being *New Christians*, (*Maranos*, the cursed race,) as they were termed, were perpetual objects of jealous observation. It is stated that, within ten months of this first year of the Spanish Inquisition, in Seville alone, 298 New Christians were burned. The scene of execution was the *Quemadero*, in the suburbs, a stone area crowned at its angles with statues of the four greater Prophets, which served to support the transverse beam on which a platform was raised. Here, as late as 1782, a woman accused of Molinism was committed to the flames.* It was destroyed in 1810, in order to erect a battery against the approaching French army. These exercises of power were not deemed sufficient. The Pope, Sixtus IV., had been appealed to by the numerous bands who emigrated from Spain under the dread of persecution; and their appeal, instead of checking the tyranny against which it was directed, tended to its firmer consolidation. After a short correspondence with Isabella, it was agreed that the sentences of the Spanish Inquisition should, for the future, be definitive. The Holy See relinquished its powers of revisal, and in 1483 Father Thomas de Torquemada, (*de Turrecrematâ*, as he is appropriately Latinized,) a Dominican, and Prior of the Monastery of the Holy Cross at Segovia, received his appointment as first Grand Inquisitor of Spain.

Torquemada arranged a Royal Council, of which himself was President, with certain subaltern Tribunals under its control. He issued also XXVIII Articles of *Instructions*. By these, voluntary self-denunciations were especially recommended. The general spirit of these Articles, for we have not room for details, may be apprehended from a slight specimen. By the XIth it was decreed, that if an Heretic detained in the prisons of the Holy Office demanded absolution and appeared to feel true repentance, it might be granted to him, imposing at the same time perpetual imprisonment. By the XIIth, if the Inquisitors *thought* the repentance pretended, they might refuse absolution, declare the penitence false, and condemn the prisoner to be burned. By the XVth, if a semi-proof existed against a person

who denied his crime, he was to be put to the torture. If he confessed during his agony, and afterwards confirmed his confession, he was to be punished as convicted. If he retracted, he was to be again tortured or condemned to an extraordinary punishment. And this appears ever afterwards to have been the regulation concerning Torture. Mariana has given a concise view of the effects produced by Torquemada's Articles. *A Turrecremata edictis propositâ spe veniæ, homines promiscuæ ætatis, sexûs, conditionis, ad decem et septem millia ultrò crimina confessos memorant: duo millia crematos igne, majori numero in vicinas Provincias fugâ dilapsos.* (de Reb. Authorities
for the
accounts of
the Inqui-
sition.

It is only from such documents as these *Instructions*, and others similarly authorized by the Tribunal itself, that authentic information of its processes can be derived; and on this account, instead of adding one more imaginary History of the Inquisition to the many which already exist, we shall content ourselves with gathering a few scattered notices, upon the truth of which, as furnished in the above-named manner, implicit reliance may be placed. It is manifest that in an Institution, one of the leading principles of which was the most profound secrecy, matters which it sought to conceal could be discovered by one of two means only, either by the treachery of its agents, or else by the revelation of some prisoner who had escaped extreme punishment. Neither of these sources have been wanting; but neither of them can demand our full confidence. Good faith is little to be expected from a renegade, who, to excuse his own apostacy, will always be tempted to overcharge the crimes of those whom he has abandoned; and however truly an individual may relate the sufferings experienced by himself, he cannot be supposed to have obtained any knowledge of the general system of his prison-house, beyond his own particular case. Our above remarks will be borne out by a very slight inspection of a few of such Works on the Inquisition as have been printed from time to time; and which, in truth, in their leading accounts, are nothing more than mere transcripts from each other.

Marsollier.

Limborch.

Reginaldus
Gonsalvus
Montanus.

Marsollier, of whom we have already spoken, treats more of the external History than of the interior conduct of the Inquisition. His little Volume is well written, and bating a few inaccuracies in names and dates, appears to have strong claims upon credibility. The History of Limborch is the fullest and most important which has been framed. He had received much information from Orobio, a Spanish Jew, who, after escaping from the dungeons of the Tribunal, had settled in Amsterdam; and, what was far more valuable, for general purposes, Limborch possessed a Register of the Sentences of the Inquisition of Toulouse from 1307 to 1323. This he appended to his History. He was a man of much acuteness and sagacity. His Work is not pleasantly translated by Chandler, (who has omitted the Toulouse Register,) and perhaps not very harmoniously arranged by himself; but while he relies upon his own stores he is undoubtedly the safest guide of his kind. Whenever he falls into the track of others we must be permitted to suspend our confidence. We do not call to mind any other History, save that of Fra Paolo, which is confined to Venice, deserving of separate notice, however numerous they may be.

Of narratives by escaped prisoners, one of the earliest was published at Heidelbergh, in 1567, by Raymond Gonzalez de Montes, who nine years before had fled

from the Inquisition of Seville. The Volume *Stæ. Inquisitionis Hispanicæ artes aliquot detectæ* is now very rare, and certainly contains many very striking particulars. We speak of his escape on the authority of Llorente and others, who roundly assert it; but it is not noticed by Limborch, who merely says that he was a Protestant who collected a Reformed Congregation at Seville; nor do we discover any internal evidence in his own Volume that he had ever been imprisoned. His statements have been unsparingly copied by more recent compilers, and, indeed, form the basis of most of the later professed Histories.

William Lithgow, a somewhat fantastical Scotch pedestrian, and an imitator more than *passibus æquis*, (for he far outwalked him,) of the well-known Tom Coryat, in 1620 was thrown into the Inquisition of Malaga as a spy, and was afterwards detained as a Heretic. Here he was so cruelly tortured, that even after having obtained deliverance, through the interference of the English Ambassador, to whom accident enabled him to make his case known, he was crippled for life. The account which he has given in his *Painful Peregrinations*, when divested of the writer's absurd quaintness and affectation, is, perhaps, not far removed from truth.

Of the same class is the History of Dellon, a French surgeon, who passed two years in prison at Goa towards the close of the XVIIth century, and was released by an Auto da Fè, at which some others were burned and himself walked barefoot. Moreri, who borrowed from this Narrative his account of the Inquisition of Goa, appears not altogether to have been satisfied with it: *cette Relation doit être lue avec précaution*. Besides Dellon, we find Louis Ramé, who, from 1679 to 1682, was immured in the dungeons of Mexico; Isaac Martin, imprisoned at Grenada in 1718; and John Coustes, a Swiss, who, under a charge of Freemasonry, was condemned to the Gallies by the Inquisition at Lisbon, was released by an application from George II., and who having found an asylum in England published his adventures in 1746. As far as these narratives go, that is to the individual cases, they appear worthy of credit, and certainly afford damning proofs of the cruelty, injustice, and iniquity of the Holy Office. But, as may be imagined, the subject was too tempting not to seduce the Booksellers into speculation; and countless little Histories are to be found of sufferings in the cells of the Inquisition, written by Authors whose experience has most probably been confined to sufferings in their own garrets.

Among Ex-Inquisitors, in the early part of the XVIIIth century, Hieronimo Barthelemi Piazza, a Dominican, a Reader of Philosophy and Divinity, and one of the Delegated Judges of the Roman Inquisition, abandoned these offices and took refuge in England, where he settled as a Teacher of Languages at Cambridge. He published, in 1722, *A short and true Account of the Inquisition and its Proceedings as it is practised in Italy, set forth in some particular Cases by H. B. P. &c. and now, by the Grace of God, a Convert to the Church of England*. This little Work is curious and, probably, authentic. Not such is that of the notorious Archibald Bower, a cunning, needy, and profligate Scot, who, educated at Douay, admitted a Jesuit, and having served as Counsellor in the Inquisition at Macerata, ran away to England under very equivocal circumstances, and became evilly distinguished as a party scribbler. Of his other Works we need not speak; none of them received much credit, and certainly none less than his

INQUISITION.

Llorente.

Faithful Account of his Motives for leaving the Office of Secretary to the Court of Inquisition, which he published in 1750. In our own days Señor Llorente, who styles himself Secretary to the Inquisition of Madrid from 1789 to 1791, has given his disclosures to the Public, and although there are many commissions and omissions in his personal History, which necessarily occasion misgiving, he has no doubt contributed in degree to our stock of information.

Works by Inquisitors.

But the Works to which a curious and diligent inquirer may turn with a certainty of most correct intelligence, are those of the Inquisitors themselves. It is not to be imagined that they have written down *all* which they had it in their power to tell; but enough is afforded us whereby we may determine that the Tribunal which they served was the most detestable in its construction, and the most ferocious in its administration, which has ever been framed to gratify the evil passions of mankind.

Eymeric.

We cannot even briefly enter into an examination of the spacious Volumes, a few of which we shall content ourselves with naming. Nicolas Eymeric, a Dominican, was created Inquisitor General of Arragon in 1356. He was afterwards Chaplain to Gregory XI. at Avignon, and Judge of Heretical causes, and having faithfully ministered to persecution for forty-four years, he died after investment with the purple. His *Directorium Inquisitorium* has been frequently printed. It is divided into three Parts. The Ist treats of the Articles of Faith; the IId of the punishment assigned to Heretics by the Canon Law and the Decretals; of Heresy itself and its different kinds; and of the crimes which fall under the jurisdiction of the Inquisition: the IIId of its various processes, of the power and privileges of its officers, of witnesses, criminals, judgments, and executions. The Tract of Johannes Calderinus, *de Hæreticis*, printed in 1571, is a similar copious Directory, but, notwithstanding he is stated at the head of his Ist Chapter to be *inter primarios suæ ætatis celeberrimus*, such is the fleeting nature of some celebrities, that we are unable to vouch for his pretensions to belief. Samancas, a Bishop, (*Pacensis Episcopus*), has collected largely on these matters in a quarto volume, a third Edition of which was published at Rome in 1575, *De Catholicâ Institutione Liber ad præcavendas et extirpandas Hæreses admodum necessarius*. Pegna, who has commented at much length upon the above-mentioned Work of Eymeric, besides editing the *Lucerna Inquisitorum* of Franciscus Bernardus Comensis, and composing from himself an *Instructio seu Praxis Inquisitorum*, was, no doubt, well qualified for his task, for he was a Spaniard, in 1588 was Auditor, and subsequently Dean of the Roman Rota. Our Catalogue may finish with the names of Francesco Bruno *de Indiciis et Torturâ*, Lyons, 1547. Paramo *de Origine et Progressu Sanctæ Inquisitionis, ejusque dignitate et utilitate*, Madrid, 1598; and Carena *de Officio Inquisitionis et modo procedendi in causis Fidei*, Cremona, 1642. Of two other similar Works frequently referred to in the strangely rambling Volumes of Puigblanch, *The Inquisition Unmasked*, we only know the titles, *Compilacion de Instrucciones*, and *La Pratica della Santa Inquisizione*, by Massini.

Constitution of the Spanish Inquisition.

Without entering to a further extent upon the hidden processes of the Spanish Inquisition than that to which the light incidentally afforded by the above writers will permit us to tread with confidence, we may state such particulars of its external Constitution as meet the

public eye, and concerning which, as secrecy is not affected, all writers agree.

INQUISITION.

Supreme Council.

The *Supreme Council* was composed of the *Inquisitor General*, nominated by the Pope, but subject to a veto by the King of Spain; five Counsellors, of whom one must be a Dominican; a *Procurator Fiscal*; a *Secretary of the King's Chamber*; two *Secretaries of the Council*; an *Alguazil*, or *Sergeant Major*; a *Receiver*; two *Relators*; and two *Qualificators*. The number of *Familiars* (*veluti ex Inquisitoris familiâ*, Paramo, ii. 3.) and minor Officers is very great, for their privileges are extensive, and they are amenable only to their own Tribunal. Hence persons of the highest rank and of the noblest families in Spain are enrolled in the service of the Inquisition. All the Provincial Inquisitions depend upon this Supreme Council, which is equally paramount with the *Congregation of the Holy Office* at Rome; and this Supreme Council itself depends upon the Grand Inquisitor, who has the absolute nomination to every post in the Tribunal. No appeal lies from it. It makes and unmakes statutes; it confirms or annuls the sentences and decrees of the lower Inquisitions; and it has the uncontrolled rule of every matter connected with its functions. The Inquisitions dependent upon it are those of, 1. Seville; 2. Toledo; 3. Grenada; 4. Cordova; 5. Cuença; 6. Valladolid; 7. Murcia; 8. Lerena; 9. Longrono; 10. Compostella; 11. Saragossa; 12. Valencia; 13. Barcelona; 14. Majorca; 15. Sardinia; 16. Palermo; 17. Mexico; 18. Carthage; 19. Lima. Each of these is composed of three Inquisitors, three Secretaries, an *Alguazil*, and three Receivers, Qualificators, or Counsellors. Every Officer of each Inquisition, before his appointment, must give satisfactory proof of *Casa limpia*, that is, that he is descended from *old Christians*, and that not one of his ancestors has fallen under the cognizance of the Holy Office for infidelity or Heresy. Above all, he is bound to the most inviolable secrecy, and solemnly pledges himself that he will not be induced either by promises or menaces to reveal any transaction of the Inquisition, with which he may become acquainted.

Provincial Inquisitions

There are six chief offences to which the Inquisition principally directs itself. 1. Heresy. 2. Suspicion of Heresy. 3. Protection of Heretics. 4. Magic. 5. Blasphemy. 6. Injury to the Inquisition or any of its officers, and resistance of its orders; and these six offences, as they are interpreted, leave small room for escape, if the Tribunal is determined to fix an accusation. Thus Heresy is considered to be committed by any one who says, writes, teaches, or preaches any thing against Scripture, the Creeds, the Articles of Faith, or the Traditions of the Church; by a renunciation of the Roman Catholic Religion, or an exchange of it for any other; by practising or even praising the rites and ceremonies of any other Religion; or by believing that a man may be saved, whatever may be his Faith, provided he embraces it conscientiously. Those also are Heretics who disapprove any rite, ceremony, or usage not only of the Universal Church, but of the particular Church to which the Inquisition belongs; who hesitate as to the infallibility of the Pope, his sovereignty over General Councils, and his power of dethroning Princes. *A prendre les choses sur ce pied*, says Marsollier, (in whose steps we are treading,) with very grave and decorous humour, *il y auroit bien des Hérétiques en France*.

Offences cognizable by the Inquisition.

Heresy.

There is but little trouble requisite to render a man

INQUISTION.

Suspicion of Heresy.

suspected of Heresy; it is enough that he advances any proposition which scandalizes the hearer, or that he omits to denounce a person who has chanced to advance such a proposition in his hearing. Abuse of the Sacraments, or other Holy things; contempt, outrage, or injury of Images; reading, possessing, or lending to others Books condemned by the Inquisition; abstaining from the usages of the Church, as passing a whole year without Confession or Communion; eating flesh on forbidden days; neglecting mass; saying mass or confessing others without Ordination; or if in Orders, saying mass without consecration; repeating Sacraments which ought not to be repeated; or entering into marriage: if Laics, contracting a second or more marriages while a first wife is alive; assisting, even once, at any public Religious service of Heretics; neglecting a Citation of the Inquisition; or not seeking absolution after being excommunicated for a year's space;—this, it must be admitted, is a fearfully comprehensive Catalogue. But it extends yet further; an intimacy with any Heretic is of itself enough to create suspicion of Heresy; any correspondence with such an one, even for mercantile purposes, is to be avoided by those who are careful of their own safety.

Protection of Heretics.

For under the next head of Protection of Heretics are included such as permit themselves to be engaged in friendship with those not professing the Faith of Rome; who warn them against the Inquisition; who point out to them methods of avoiding its vigilance; or even who forbear from denouncing them. This duty of denunciation is to supersede every bond of blood or affection, however closely it may be knit. Brother, sister, father, mother, husband or wife, against each of these must information be presented, if the person privy to their Heresy would himself avoid like imputation, and free himself from the terrors of the Holy Office. *A fortiori*, the offence is increased if assistance or even advice be given to any one against whom the Inquisition has commenced a process; if a fugitive or a recusant of a Citation is housed, concealed, or succoured; if a prisoner is furnished with means of escape; or if an Officer is intimidated or otherwise impeded in the execution of his duty; if, without permission, a prisoner is spoken to, written to, advised, or even consoled; if witnesses are tampered with; or if any evidence which may be brought to bear against an offender is destroyed or concealed.

Magic.

Magic, as we need scarcely say, was a most fruitful source of accusation; but on this head the Inquisition was by no means singular; and the Trials for Witchcraft, for which even our English Judicature must blush to a comparatively late period, are not less disgraceful to human credulity than those which are recorded in the Holy Office. Blasphemy speaks for itself. The last crime, that of Resistance to the Holy Office, was visited with the heaviest rigour. It was the policy of the Inquisition to maintain itself by terror; disobedience to it, therefore, was in all cases a capital crime; and no birth, rank, character, or employment could shield the offender from assured extremity of punishment.

Blasphemy. Resistance of the Inquisition.

Jews and Mohammedans.

Although neither Jews nor Mohammedans were in strictness subject to the Inquisition, it is plain that they might easily be included under three of the heads of offence. Moreover, if they spoke or wrote any thing contrary to the Articles of belief common to themselves and Christians, as an impugment of the Unity of God, &c. they might be accused as Heretics. So, too, they were exposed to denunciation if they hindered the con-

version to Christianity of any of their own brethren, or yet more, if they sought to obtain a proselyte to themselves. They were forbidden to have in their keeping any prohibited Book, even if, as the Talmud, it related to their own Creed; lastly, they might not engage Christian Nurses for their children. In all these cases the vengeance of the Holy Office most unsparingly followed upon offence; for the Inquisition had sagacity enough to perceive that the dread of like punishment frequently operated as a powerful motive for conversion.

Llorente, in his XXIIId Chapter, has printed the LXXXI Ordinances published at Madrid in 1561, by which to the last the proceedings of the Inquisition were regulated. For the most part they confirm the following general outline.

INQUISTION.

Ordinances of Madrid, 1561.

On the receipt of a denunciation, which was the most usual mode of proceeding, (although common report, the suspicion of the Inquisitors themselves, or even self-accusation in the hope of lighter punishment, not unfrequently formed the basis of Trials,) the informer swore to the truth of his depositions, and pointed out witnesses. The witnesses were then examined, not as to the fact itself, for of this they were never informed; but in general terms, if they had ever seen or heard any thing which was or appeared to be contrary to the Catholic Faith or the rights of the Inquisition. This vague question frequently elicited matter quite foreign to the subject under investigation, and, as may be supposed, gave rise to fresh processes. The depositions were written down in such form and words as the Secretary approved. Inquiries were then made in all the Tribunals of the Province if any charges existed against the accused, and this *Review of the Registers* was incorporated, if it afforded any cause, in the *Preliminary Instruction*; even the same offence, if represented in different terms, was always considered to be a distinct charge. The Instruction thus prepared was submitted to the *Qualifiers*, who, by their *censure*, were to determine whether the propositions contained in it amounted to Heresy or suspicion of Heresy. The accused meantime was cited thrice to appear; if he disobeyed the third summons, he was immediately excommunicated and subjected to most severe punishment, without prejudice to that which he might afterwards receive, if proved guilty of the original charge. But few, however, were hardy enough to brave the dangers of an attempt at escape; for security was next to impossible, and the lowest punishment on detection was perpetual imprisonment. In Spain, flight was more difficult than elsewhere, for Bodies of men, not belonging to the Inquisition, but who devoted themselves to its service, ceaselessly tracked the object of pursuit through the remotest districts. The members of the Holy Brotherhood (*la Santa Hermandad*) were dispersed every where, and under countless disguises; their great duty and chief merit was the arrest of the denounced. The Crusade (*la Cruciata*) in like manner took to itself the office of denunciation; and to these must be added the swarm of Familiars more immediately attached to the Tribunal. By these last, if the evidence was deemed sufficient, or if the crime was of an enormous nature, the accused was summarily arrested, without the previous form of Citation. No asylum, no privilege, no sanctuary could protect the victim: resistance or remonstrance were both equally vain; and he who was once wanted by a Familiar of the Inquisition, had no other course than to obey in silence.

Prisons.

The prisons to which the accused were transferred were secret, and the captive had no communication except with his gaolers and Judges. He was rigorously searched, and all property, having been registered, was taken from him. Imagination, as it is natural to suppose, has been busy in painting the horrors of these cells; and they probably varied (as all prisons do) in their degree of severity. But take them at the best, even according to the description of Llorente, and they were abodes little fitting for a culprit before trial, who might be altogether innocent, and whose offence, even if he were proved guilty by the Tribunal to which he was amenable, most probably was arbitrary and factitious. "These prisons," says the writer just mentioned, "are not as they have been represented, damp, dirty, and unhealthy; they are vaulted chambers, well lighted, not damp, and large enough for a person to take some exercise in. The real horrors of the prison are that no one can enter them without becoming infamous in public opinion; and the solitude and darkness to which the prisoner is condemned for fifteen hours in the day during the winter, as he is not allowed light before the hour of seven in the morning, or after four in the evening. Some authors have stated that the prisoners were chained. These means are only employed on extraordinary occasions, and to prevent them from destroying themselves." (c. ix.)

Audiences.

Three audiences followed, one on each of the first three days of imprisonment: the forms of these appear to have been invariably the same, and accord with such as we shall presently exhibit in an illustrative case. On the fourth audience, the Prisoner for the first time learned the charge against him, for hitherto he had been only vaguely questioned, and urged to confess any offence of which he might be conscious. The Procurator Fiscal now exhibited his *Requisition*, in which, as in the Preliminary Instruction, one single charge might be made to assume numerous different shapes, to the great perplexity of the accused, who was required, between each article, to reply, upon the instant, whether it were true or false. The Judge, according to an inherent principle of our English Law, is always considered the advocate of the Prisoner. On what widely different notions the Code of the Inquisition was framed may be learned from its own mouth. Even the gesture, and the degree of terror which the Examiner was to assume in his countenance, were scrupulously defined; and Massini (*part x. arvert cliv.*) instructs him thus, *Il giudice mentre esamina i rei dee mostrarsi nel volto piuttosto rigido e terribile che piacevole*. Moreover, instead of warning the Prisoner that he be most careful not to let any word escape his lips which may contain self-accusation, self-accusation is the chief object which the Judge sought to obtain; and to accomplish this purpose he was tutored in his legal education to adopt the most subtle stratagems, in order to entrap his victim. We transcribe one of the ten Precautions, *Cautelæ*, as Eymeric mildly terms them, which are to be used to obtain Confession. *Si videat Inquisitor Hæreticum vel delatum nolle detegere veritatem, et scit eum per testes non esse convictum, et secundum indicia videtur eidem esse verum quod deponitur contra eum, quòd quando negat hoc vel illud, Inquisitor accipiat Processum, et revolvat eum, et post dicat ei; "Clarum est quod non dicis verum, et quod ita fuit sicut dico ego: dicas ergo veritatem negotii clarè:" sic ut ille credat se convictum esse, et sic apparere in Processu. in manu unam cedula seu scripturam, et quando delatus seu Hæreticus interrogatus negabit hoc vel illud, Inquisitor, quasi admirans, dicat ei; "Et quomodo tu potes negare? Nonne clarum est mihi?" Et tunc legat in cedula suâ, et pervertat eam, et legat et post dicat, "Ego dicebam verum; dicas postquam vides me scire." Caveat tamen Inquisitor quod non tantum descendat ad speciem, dicendo se scire negotium, quod Hæreticus cognoscat quod ipse ignorat; sed stet in genere dicendo, "Bene scitur ubi fuisti, et cum quo, et quo tempore, et quid dixisti:" et tangat sibi aliquod certum, quod scit ita esse, de aliis autem in genere loquatur. (Dir. Inq. iii. n. 102.)

The Prisoner was then asked if he wished to make a defence, and for that purpose he was desired to select some advocate on the list of the Holy Office. This advocate was not allowed to see the original process nor to communicate with his client. He was to frame his argument upon the result of the Preliminary Instruction reported to him by a notary, in which were inserted the depositions of the witnesses, unaccompanied by their names or by any statement of time or place, and without the introduction of such circumstances as appeared to weigh for the Prisoner. The advocate might inquire if the Prisoner intended to challenge the witnesses, that is such persons as he imagined to be witnesses. If he chanced to be right, the deposition of the person whom he challenged must receive a *Ratification*, or, in other words, the Judge must ascertain to his own satisfaction, that the witness is deserving of credit. If, however, confession was not obtained, and the proofs were not sufficient, yet if semi-proof, such as it is called, was established, the Prisoner might be subjected to the Torture. Upon the fearful inflictions of the pulley, the rack, and the fire, we shall not dwell: it is admitted by Llorente, that none of the methods which have been so often described can be accused of exaggeration, and to such an admission no doubt can attach; how far the qualification with which he accompanies it is to be credited we know not; "it is true that it is so long since Torture has been inflicted by the Inquisitors that the custom may be looked upon as abolished, and the Fiscal only makes his demand in conformity to the example of his predecessors; yet it is equally cruel to make the prisoners fear it." If an account given by a professed eye-witness, in 1820, in a note to the Preface of the same Work, of the infliction of death by a machine called the *Pendulum*, which in lingering horror and refinement of cruelty exceeds any enormity recorded of Phalaris or Nadir Shah, be true, it is not easy to believe that the minor (could such an epithet be anticipated?) barbarity of the Question had been long disused. Marsilius is stated by Pegna in his Commentary on Eymeric, (*Pars iii. Comm. cx.*) to have enumerated no less than fourteen species of Torture; and to add, that he himself had invented others—*ut somni subtractionem, quem laudat Paulus Grilandus*.

A full confession was deemed so important, (because without it confiscation was not permitted,) that if Torture failed to procure it, the unhappy sufferer, whose limbs were just released from the gripe of the executioner, and whose spirit was yet broken and distracted by the remembrance of the agonies which he had undergone, was exposed, in all his weakness, to fresh artifices. A seeming friend was instructed to gain his confidence, and by a show of affectionate

anxiety, to win from his unsuspecting reliance that secret which no bodily sufferings could extort. Eymeric shall again tell his own story. *Habeat Inquisitor unum de complicibus, seu alium benè ad fidem conversum et de quo benè confidere possit, illi capto non ingratum, et permittat illum intrare, et faciat quod ille loquatur sibi, et, si opus fuerit, fingat se de sectâ suâ adhuc esse, sed metu abjurasse, vel veritatem Inquisitori prodidisse. Et quum Hæreticus captus confiderit in eo, intret quodam sero ad Hæreticum illum captum protrahendo locutiones cum eodem, et tandem fingat nimis esse tarde pro recessu, et remaneat in carcere cum eodem, et de nocte pariter colloquantur, et dicant sibi mutuò quæ commiserunt, illo qui superintravit inducente ad hoc captum; et tunc sit ordinatum quod stent extra carcerem in loco congruo explorantes eos, auscultantes, et verba colligentes, et si opus fuerit, notarius cum eisdem. (Ib. iii. n. 107.)* Be it remembered that the contriver and teacher of this black and hellish treachery, had persuaded himself that in practising it he was contributing to the Glory of God!

After all, if semi-proof existed, it does not appear that the prisoner obtained his liberty by successfully braving the Torture; even when, according to the polished language of Eymeric, he has been *decenter quæstionatus et tormentis expositus*. (*Dir. Inq.* iii. sec. 157.) Few, if any, so circumstanced were permitted to return to upper day, and their lot was perpetual secret confinement in the prisons, by a refinement of contradiction, called those of *Mercy*. On the other hand, if the proofs entirely failed, (a rare occurrence,) or if they were completely established by witnesses and by confession, the Tribunal proceeded to the *Publication of the Testimony*, in which the declaration and facts were read to the accused; who after each article was required to admit its truth; and here, if he had not previously alleged any thing against the witnesses, by an unusual clemency he was permitted to object to them. This indulgence, considering the general principles of the Court, so unfavourable to the prisoner, must be viewed with surprise; since the depositions now first read to him, might perhaps throw some light on the parties whose evidence had been received by the Inquisitors; and in this place his Advocate delivered his *Defence*. The whole proceedings were then examined by the Qualificators, who were to pronounce a *definitive sentence*, which was the precursor of the *sentence*. If this was acquittal, the prisoner still remained unacquainted with his denouncers and the witnesses against him, and he was considered happy in permission to return to his family, with a certificate of absolution; after a heavy demand for expenses: for the Inquisition had no funds but such as proceeded from confiscation.

A single case, which we shall present below, will serve more fully to explain the forms which we have just noticed. It is taken from a volume published at Boston in 1828, under the title of *Records of the Spanish Inquisition, translated from the Original MSS.*, which professes to contain a translation of some papers forming part of the plunder of the Inquisitorial Palace at Barcelona, when it was stormed by the insurrectionists during the Revolution of 1819; and which then fell into the possession of an American Traveller. Without resting much on this authority, which reminds us of the manner in which the papers of Captain Lemuel Gulliver, and others equally veracious, have been obtained; and without vouching for the authenticity of these or

any other Transatlantic documents, it is but just to say that internal evidence appears to be in their favour; that if they are a work of invention, invention has been most elaborately employed; and that the forms represented in them, for the most part, accord with all that has hitherto come to light respecting the Tribunal to which they relate. We cannot dwell upon them at length, nor indeed do they deserve such notice, but we may briefly mention some particulars of the first case which they record. It is that of Pedro Ginesta, a Brazier, who, in the year 1635, was accused of eating bacon on a prohibited day, the eve of St. Bartholomew. Ludicrous as this charge may appear, it involved at least suspicion of Heresy, and it was attended with most harassing consequences to the unhappy defendant. The order for his arrest was issued on the 14th of September; on the 17th he was transferred to a secret prison, searched, and "allowed nothing prohibited." His property was, according to custom, most carefully registered, and the inventory is curious, as it exhibits both the minuteness and the jealousy of the Holy Office. An official instrument records, that "the articles found upon him were two shirts, a pair of breeches, a purse, one *dinero* and three *sueños*, which have been given in charge to the Camara de Pablo." Poverty herself could scarcely have less to boast of; and yet all this nothing was taken from him.

His first audience took place on the 18th of September, when he was sworn to declare the truth, and to observe secrecy with respect to every thing he might see, hear, or learn, and every thing which might befall him; he was then questioned as to his name, age, occupation, birth-place, and residence; his father, grandfathers, paternal and maternal, wife, uncles, brothers, and children; their occupations, birth-places, and residences; the occupation and descent of his ancestors and collateral relations, and whether any of them had been punished or put under penance by the Holy Office. If he was a baptized and confirmed Catholic; if he made it a practice to attend mass, confession, and the Sacrament, and under what Priests. If he could read and write, and had studied any Science or Art; if he had ever left the Kingdom of Spain since his first arrival, or had any dealings with people of equivocal Faith. What were the events of his life; whether he knew or conjectured the cause of his imprisonment. He was then informed, in what appears to have been the language always employed, "that in the Holy Office it was not customary to apprehend any person without sufficient information that he had said, done, or witnessed the commission of something really or apparently offensive against God our Lord, or against his Holy Catholic Faith, and Evangelical Law, taught and preached by the Holy Mother Roman Church, or against the just and free exercise of the Holy Office: consequently he was to understand that he was imprisoned on account of some such information, and he was admonished on the part of God our Lord, and the glorious and blessed Virgin Mary, to recollect himself and confess his offences without concealing any thing relating either to himself or any other person, and without uttering false testimony against any one; by doing all which his trial should be despatched with all brevity, and decided with that mercy which is shown by the Holy Office to all those who confess freely; otherwise justice should be exercised." On the second and third audiences, on the two succeeding days, this admonition was repeated, and

no confession having been obtained, he was warned that the *Promotor Fiscal* was about to exhibit his accusation. A written document accordingly was produced, in which the prisoner was charged with having committed offences against the Holy Faith, by saying and performing things which savour of the Heretic Luther, not having the fear of God before his eyes, but regardless of his own conscience and the justice administered by the Inquisition; for that having been warned repeatedly that it was a Fast, nevertheless on St. Bartholomew's day, he caused to be cooked and did eat a dish of bacon and onions; and that being of a nation infected with Heresy, (he was born at Orliach, in Uebernia, in the Kingdom of France,) it is presumed that he has on many other occasions eaten flesh on forbidden days, after the manner of the Sect of Luther, and committed many other offences against the Holy Faith, besides knowing that others have committed the same offences, and that having been admonished to declare the truth, he has not done so, and therefore is perjured. It was, therefore, prayed that evidence might be received, that when the prisoner had been pronounced guilty, he might receive the heaviest punishment fixed by statute; and that if it be found necessary he be put to the torture, and that the same be repeated till he confess the whole truth both of himself and others. The prisoner, in reply, admitted that he had eaten the bacon and onions, notwithstanding he had been warned not to do so, but that the offence had not been committed from bad intention, but through forgetfulness, occasioned by his great age; the unhappy victim being in his eightieth year. He was then allowed a copy of the accusation, (we doubt this fact, for Puigblanch and Llorente both state expressly that no prisoner ever saw his written accusation,) and desired to choose a Counsel for his defence, (with whom, however, he was not allowed free communication,) and having been ordered to make arrangement for his trial in three days, he was again admonished and remanded to prison. The fourth audience took place on the 6th of October, when the *Promotor Fiscal* exhibited the Publication of the Testimony, which sufficiently proved the crime, already admitted by the accused. On the 9th of October his defence was produced, in which the Counsel, not denying the offence, pleaded his client's ignorance, occupation, age, and infirmity, and affirmed that as he was a good Christian, he ought not to receive any ordinary or extraordinary punishment, and concluded by asking mercy. Accordingly, on the 16th, he was sentenced to be reprehended, admonished, and released from prison; which correction he received with humility, and having promised amendment, was discharged.

Punish-
ments.

To return to the general processes. For the condemned there were numerous punishments, apportioned to their degree of crime, and the public infliction of them was reserved for an *Auto da Fè*; when the gallies, imprisonment for various terms, whipping, and the stake, were largely dispensed. Accounts of these celebrations are every where to be found; we have already given a few particulars, (ACT OF FAITH,) and we are little inclined to dilate upon them. Those who have abjured, *i. e.* admitted and renounced their crime, whether it be *de levi*, or *de vehementi*, from a light or a violent suspicion of Heresy, perform their respective penances in a garb of infamy, which they are compelled to wear either for a longer or shorter period. ciled Heretics, as a protecting badge, at a time when all suspected persons were indiscriminately massacred. It is a close tunic, like a Priest's cassock, of coarse yellow woollen stuff. Those who abjured *de levi* wore it plain; those *de vehementi*, with one arm of a red St. Andrew's Cross. The formally convicted Heretics who were reconciled, carried this cross entire; a burning taper in their hands, and a rope round their necks, completed their costume. The capitally sentenced, (*relaxados*, abandoned,) who repented before their doom was pronounced, were clothed in the third sort of *san-benito*, with the addition of a conical cap made of the same stuff, or of pasteboard, and called *caroza*. The *san-benito* of those who repented after sentence, and thus were privileged to be strangled before burning, was decorated with a bust surrounded with reversed flames; (*fuego revuelto*;) and those who were to encounter the fullest severity of punishment, as being impenitent and *negative*, carried the flames ascending, and interspersed with hideous figures of Devils. These vests, at one period, were preserved and suspended in Churches as perpetual marks of dishonour to their wearers. The *relaxados* bore in their hands a wooden cross painted green instead of a lighted taper.

Por Joseph del Olmo, Alcayde, y Familiar del Santo Oficio, Ayuda de la Furiela de su Magestad, y Maestro Mayor del Buen Retiro y Villa de Madrid.* After public notification of the benevolent intention of the Inquisition and the King, eighty-five *Grandeas* presented themselves to serve as *Familiares*, all whose names and titles are recorded to their honour. Two days before the real *Auto*, a rehearsal took place, and the actors marching out of the city carried fagots to the spot appointed for burning. As they passed the Palace, the King taking in his hands an ornamented fagot, arranged for the purpose, exhibited it to the Queen, and ordered it in his own name to be cast first into the flames. At seven on the appointed morning, the procession moved from the Palace of the Inquisition, with every possible circumstance of pomp, display, and triumph. A new Theatre had been erected in the great square, containing boxes especially allotted to the Royal Family, the Great Officers of State, the Foreign Ambassadors, and such other authorities as were privileged to claim them. The prisoners were exhibited on a raised platform. No more than five days had been set apart to frame this spacious and magnificent structure which was to contain the whole Court and a great part of the population of Madrid, yet such was the enthusiasm of those employed

that it was fully completed. It appeared, says Olmo, that God moved the hearts of the workmen, so as to overcome the great difficulties which occurred in the execution; a circumstance strongly indicated by sixteen master-builders, with their workmen, tools, and materials, coming in, unsolicited, to offer their services to the overseer of the works; and all persevered with such fervent zeal and constancy, that, without reserving to themselves the customary hours for rest, and taking only the necessary time for food, they returned to their labour with such joy and delight, that, explaining the cause of their ardour, they exclaimed in the following manner, "Long live the Faith of Jesus Christ! all shall be ready at the time prescribed, and if timber should be wanting, we would gladly take our houses to pieces for a purpose so holy as this." The prisoners having been paraded in front of the Royal balcony, in order that their Majesties might have the satisfaction of a close view of them, were led to their seats; and the Inquisitor General having tendered to the King the customary oath of support to the Holy Office, Mass commenced. The Reverendissimo Padre Maestro Fray Tomas Navarro, del Orden de Predicadores, Calificador de la Suprema, y Predicador de su Magestad, then preached a lengthy sermon from Ps. lxxiv. 23. *Exurge, Domine, judica causam tuam*, the motto of the Inquisition; which, as it could not be heard, is here printed, and occupies fifty pages. The sentences were then read, by which one hundred and eighteen wretched victims were condemned, of whom no less than eighteen, *relaxados à la justicia y brazo seglar* were destined to the stake. Of these, six were women. All but one were relapsed Jews; and that one was a Mohammedan. Besides these, sixteen effigies of *relaxados* were borne in procession, who had escaped the flames by seasonable flight; ten of such as had died before execution, and whose bones, carried in boxes, were to be burned as a compensation. Two persons sentenced to death, a man and a woman, were withdrawn from the very scaffold. The Inquisitor *usando de la clemencia que acostumbra este Santo Tribunal, los libertò por entòces de la muerte, aplaudiendo mucho el pueblo, que al mismo tiempo que usava de la severidad de la justicia, mostrava la mansedumbre de la misericordia: y sin duda fuera mayor su admiracion, si el corto tiempo y mucho numero de Reos huviera dado lugar para que se pudiesen leer sus processos, que por ventura se viera quanto mas crecida es su piedad que su rigor.* Notwithstanding these extraordinary demonstrations of clemency, it will be perceived from the above list, that not less than forty-four human beings had been condemned as offerings to Moloch by his grisly Ministers. We hasten over the final horrors. It may be enough to point out the very words of an often cited formula, in which the Inquisition, while it delivers its victims to certain death, in one of its most terrific modes, expresses a pretended wish that they may be treated with gentleness. It occurs in the 31st fol. of the *Libro del orden de processar en la Inquisicion*; and the expressions are worth noting. *Devemos de relaxar, y relaxamos la persona del dicho fulano à la justicia, y brazo seglar, especialmente à fulano, Corregidor de esta Ciudad, y su Lugar-Teniente en dicho oficio. A los quales rogamos, y encargamos muy afectuosamente, come de derecho mejor podemos, se ayan benigna y piadosamente con el.* According to this charitable instruction, when the Royal party had withdrawn, about nine o'clock, the criminals

proceeded to the burning place, where in the end *fuéronse executando los suplicios, dando primero garrote à los reducidos, y luego aplicando el fuego a los pertinaces* (these were ten out of the eighteen) *que fueron quemados vivos con ño pocas seños de impaciencia, despecho, y desesperacion. Y echando todos los cadaveres en el fuego, los Berdugos le fomentaron con la leña, hasta acabarlos de convertir en ceniza, que seria como à las nueve de la mañana.*

Geddes, who filled the post of Chaplain to the English Factory at Lisbon from 1678 to 1686, witnessed an Auto da Fè in that Capital on the 10th of May, 1682, of which he has left some account in the 1st Volume of his *Miscellaneous Tracts*. In this celebration, the bones of eight prisoners, who had died in confinement, were paraded to the place of burning, (*Roussi*.) ninety-four criminals were whipped, imprisoned, or sent to the Gallies, one was first strangled and then burned, three relapsed Jews were burned alive. The offences of these criminals were of very varied characters. Some not at all demanding commiseration, and which, we doubt not, were justly punished; others no less fantastical. We read of a culprit who was imprisoned during pleasure, whipped, and condemned to the Gallies, "who, as is presumed, did deny the Faith and go over to the sect of the Moors;" of four who abjured *vehementi*, one had taken some consecrated crumbs out of the Sacristy of a certain Church; against a second there was a strong suspicion that he had made a compact with the Devil; and the others had spoken "heretical, rash, scandalous, and, to pious hearers, offensive propositions, against our Lord and his most holy Images." There were, at least, two cases involving egregious cruelty: a woman was adjudged to perpetual imprisonment, during two years of which she was to wear the *san-benito*, for having bribed an officer of the Inquisition to convey a letter to her husband, who had been for eight years a captive in its dungeons; and a Jewess, only twenty-six years of age, ten of which had been passed in prison, where the rack had crippled her, was exhibited to scorn for a few hours, that she might afterwards return to a cell in which she was to be immured for the remainder of her days. Geddes was near enough to one of the *relaxados* to hear the pathetic exclamation which he uttered on gaining the door of his prison. It was long since he had beheld the sun, and he raised his eyes to it with rapture, inquiring how it was possible for those who saw that glorious body, to worship any being but Him who created it! He was hastily gagged as a Blasphemer. It was in the conclusion of this barbarous scene that the shout which we have mentioned in another place, "Let the dogs' beards be made!" was raised, and the torture which the savage yell demanded was speedily inflicted upon the sufferers. It should be added, that Geddes was a man of acute observation and of undoubted veracity. The exercise of his functions as a Protestant Minister offended the Portuguese Inquisition, and he was summoned before it. Notwithstanding a manly and vigorous resistance of this breach of the amicable relations subsisting between the two Countries, in which he was staunchly supported by the resident English Merchants, he was unsuccessful in his appeal: for the Ecclesiastical Commission at home, which was at that time labouring to reestablish Popery, suspended him from his Chaplaincy.

according to Llorente was a woman, (a *Beata*, which we know not whether to render a *professed* or a *pretended* Religious,) who had made a compact with the Devil. She suffered on the 7th of November, 1781. A Writer in the *Quarterly Review*, (lvii. p. 257.) whose pen is not easily to be mistaken, and who has condensed into a very able and vigorous summary many of the crying enormities of the Inquisition, speaks of 1788. We suppose him to allude to the same execution, and the date is probably an inaccuracy. Llorente has calculated, but assuredly not on sufficiently accurate data, the number of victims whom that Tribunal has sacrificed since its first institution. One statement cannot be disputed, for it is authorized by the Inquisitors themselves; and was recorded, no doubt, as they believed, to their glory. In the Castle of Triana at Seville, in which the Tribunal held its sittings, an Inscription, placed there in 1524, imports, that from 1492 to that year, about one thousand persons had been burned, and twenty thousand condemned to various penances. Horrible as this destruction of life may be, let it not be forgotten, that the rage of our English Papists exceeded it by a ratio of more than two to one. In the four years of the Marian Persecution, no less than two hundred and eighty-eight Martyrs perished in the flames. If this Princess had not been early removed by the mercy of Heaven, England might have competed with Spain in the sum of the calculation of blood, as well as in a portion of the items.

Llorente denies that Don Carlos (who is generally numbered among the sufferers through the Spanish Inquisition) was either tried or sentenced by that Court. He supposes that the received belief may have arisen from the opinion given against the Prince by the Council of State, of which the Inquisitor General was President; but that, in fact, the King his father gave the verbal sentence which produced his son's death. The transaction, necessarily, is involved in mystery; and the Spanish Historians have uniformly denied the romantic passages in the unhappy Prince's story, which are so well fitted, and have been so often adapted, to the purposes of the Drama. According to these authorities, Don Carlos was not acquainted with the secret article of the Treaty which betrothed him to Isabella of France; nor is there any reason to suppose that he ever was in love with his step-mother. His disposition is represented to have been ferocious, depraved, and sanguinary: and the excesses of which he was guilty are to be palliated only by a belief in his insanity. The enormities of the son, however, be they what they might, cannot diminish the unnatural guilt which presses upon his father's memory: and whatever may be its real version, the death of Don Carlos, indisputably resulting from the will of Philip, is among the darkest passages on the blood-stained scroll of History.

Of the present state of the different Inquisitions, it is by no means easy to offer a correct account. The CONGREGATION of the Holy Office with its twelve Cardinals, *Inquisitors General*, nominated by the Pope, the Bishops and Priests who form its *Consultors*, its Dominican *Commissary*, and its branch, the CONGREGATION of the INDEX, still watches over Heresy in Rome itself, and regulates such other similar Italian Tribunals as choose to acknowledge its dominion. The use of Torture in this Court was abolished by Pius VII. in 1816, a sufficient admission that up to that time it was employed.

In Spain, the solitary act which may seem to extenuate the base treachery of Napoleon's occupation of that Kingdom, was the suppression of the Inquisition in 1808, not as an unjust and cruel Tribunal, but as one "encroaching on the Royal authority;" and it was during the short-lived reign of Joseph Buonaparte that Llorente, as he assures us, obtained possession of the archives of the Supreme Court. The *Cortes*, in 1813, confirmed this suppression by a decree of their own; but the restoration of Ferdinand VII. within a year re-established "the happy influence" of the Inquisition, as it is termed in the Royal ordinance, "at the desire of many learned and virtuous prelates and different bodies and corporations," "to preserve the tranquillity of the Kingdom."

Of the Inquisitions established in the Colonies of Spain and Portugal we possess equally scanty authentic information. In the Madrid Gazette of May 14, 1816, an account is given of an *Auto da Fè* celebrated by the Inquisition of Mexico in the preceding December. At this solemnity a Priest, Don Joseph Maria Morellos, suspected of Atheism, materialism, and other errors, (in proof of which charges it was advanced that he had two children,) having abjured, was absolved. At the same moment, however, at which the Holy Office had prosecuted him for Heresy, the Viceroy also arrested him for Rebellion; and he was freed from the hands of his Spiritual Judges, only that he might be hanged by the Civil authorities.

Of Goa, where a Court of Inquisition was erected under John III. of Portugal, in 1561, our latest information is obtained from Dr. Claudius Buchanan, who visited it in 1808; not, perhaps, in the spirit best adapted for calm and unprejudiced judgment. He was received most hospitably, entertained and lodged in a Convent of Augustinians, by the second Inquisitor himself; who, in common with many of his recorded brethren, bore a name most appropriate to his office. If the Inquisitors like the Popes, on their elevation, were in the habit of adopting a new designation, we could scarcely hope for one more becoming than Joseph a Doloribus. In the society of this very courteous Inquisitor, Dr. Buchanan passed five days. During these, he informs us that he learned incidentally much information concerning the Inquisition: but the only two particulars which are communicated in his Journal are, that the Establishment is nearly as extensive as it used to be, and that the Inquisitor, clothed in black robes, sits in the Tribunal three or four days every week. Dr. Buchanan had in his pocket M. Delon's *Relation de l'Inquisition de Goa*, and in order to obtain direct statements from his host he bethought himself of placing this volume in his hands. He would do as wisely if he offered the narrative of the trial and condemnation of the Witches of Warbois, or any of Hopkins's yet later victims, to the present Lord Chief Justice of England, and if he at the same time asked him whether the Criminal Law was still conducted after the fashion therein exhibited. The Inquisitor began to read the volume, and, as might be expected, "had not proceeded far before he betrayed evident symptoms of uneasiness. He turned hastily to the middle of the book, and then to the end, and then ran over the Table of contents as if to ascertain the full extent of the evil. . . . He turned over the pages with rapidity, and when he came to a certain place, he exclaimed in the broad Italian accent, '*Mendacium! Mendacium!*' I requested he would mark those pas-

sages which were untrue, and we should discuss them afterwards, for that I had other books on the subject. 'Other Books!' said he, and looked with an inquiring eye at those on the table. He continued reading till it was time to retire to rest, and then begged to take the book with him." (*Christian Researches in Asia*, 160.) We cannot wonder at the consternation which he expressed; nor at his anxiety to determine the full extent to which his Profession had been held up to shame and dishonour.

In the course of the following night an accident occurred which greatly alarmed Dr. Buchanan, and from the effects of which, it is plain, he did not quite recover during the remainder of his stay. A boy about fourteen years of age, probably under the influence of the night-mare, roused the house by his screams, and declared that he had seen a ghost. The Inquisitor affirmed that it was a mere *phantasma animi*. Dr. Buchanan at first concluded that the shrieks were those of his own servants, whom the Alguazils of the Holy Office were carrying off to prison, and this apprehension, as we shall perceive, was never entirely shaken off.

In further conversations large admissions were obtained from the Inquisitor; that "Dellon's description of the dungeons, of the Torture, of the mode of trial, and of the Auto da Fè, were, in general, just;" but that he had misrepresented motives; as if any motives could justify the cruelties which were not denied. The Inquisitor, he added, "had undergone a change in some respects, and its terrors were mitigated." In point of fact, the Inquisition of Goa had been suppressed by Royal Edict in 1775, and reestablished again four years afterwards, with two restrictions, one of a humane tendency, which increased the number of witnesses necessary for a conviction; the other opening a door to fearful abuses, by abolishing public Autos da Fè, and ordering sentences to be executed privately within the walls of the Inquisition. "I asked the Father," continues Dr. Buchanan, "his opinion concerning the nature and frequency of the punishments within the walls. He said he possessed no certain means of giving a satisfactory answer; that every thing they transacted there was declared to be *sacrum et secretum*. But this he knew to be true, that there were constantly captives in the dungeons; that some of them are liberated after long confinement, but that they never speak afterwards of what passed within the place. He added, that of all the persons he had known who had been liberated, he never knew one who did not carry about with him what might be called 'the mark of the Inquisition,' that is to say, who did not show in the solemnity of his countenance, or in his peculiar demeanour, or his terror of the Priests, that he had been in that dreadful place."

It was not, however, upon these admissions, which might be thought sufficiently damnable, that Dr. Buchanan founded his opinion of the existing abuses of the Holy Office at Goa. It was upon the denial of a request which, under all circumstances, appears to have been not a little extraordinary. Dr. Buchanan was a private individual, travelling for his own amusement, without authority, unknown, unaccredited, slightly introduced, of a different nation, and professing a Faith considered heretical by his entertainer; nevertheless, he was manifestly not a little chagrined that the Inquisitor could not be prevailed upon, by the following pathetic adjuration, to what he must have considered a gross

violation of his official duties:—"Lead me down," said I, "to the inner building, and let me pass through the two hundred dungeons, ten feet square, described by your former captives. Let me count the number of your present captives, and converse with them; I want to see if there be any subjects of the British Government to whom we owe protection; I want to ask how long they have been here, how long it is since they beheld the light of the sun, and whether they ever expect to see it again. Show me the Chamber of Torture, and declare what modes of execution or of punishment are now practised within the walls of the Inquisition in lieu of the public Auto da Fè. If after all that has passed, Father, you resist this reasonable request, I shall be justified in believing that you are afraid of exposing the real state of the Inquisition in India. To these observations the Inquisitor made no reply, but seemed impatient that I should withdraw." This can scarcely be a matter of surprise; and probably would be the wish expressed by the Governor of any English House of Correction who might be urged by a Roman Catholic Priest, professing hostility to his office, to show him the cells set apart for solitary confinement, or perhaps any others under his control. Dr. Buchanan only asked the Inquisitor to infringe the secrecy which he had been taught to esteem the very soul of his Institution, and to break through the established regulations of his Office in order to gratify the curiosity of a stranger well inclined to condemn it. Enough had been dropped in the course of conversation to show the iniquity of that Institution; and almost the only thing to be advanced in its favour is that an avowed heretic and enemy was permitted thus to beard one of its chiefs within the walls of his own palace, and that he did not become a permanent inhabitant of the dungeons which he so anxiously sought to visit. Certain it is, that notwithstanding his boldness, Dr. Buchanan was not without some misgiving as to the event: while the Inquisitor was preparing to show him as much of the establishment as it was consistent with his duty to exhibit; "I thought," says the Doctor, "that his countenance was more severe than usual, and that his attendants were not so civil as before. The truth is, the midnight scene was still on my mind."

The Inquisitor of Goa appears to have possessed many gentle and agreeable qualities, and to have been free from those evil tendencies which Bayle, in a passage which we shall subjoin, condenses in a narrow compass as fitting for a Minister of the Holy Office. He is speaking of Hochstrat. *Il se fit moine Dominicain, et il fut Prieur du Monastère de Cologne, Docteur et Professeur en Théologie, et Inquisiteur dans les trois Electorats Ecclésiastiques. Jamais homme ne fut plus digne que lui d'être honoré de cette dernière charge, car il étoit amplement pourvu de toutes les mauvaises qualitez qui sont nécessaires aux Inquisiteurs et aux Délégués. Il étoit violent; il accusoit sous les plus petits prétextes; il vouloit être juge et partie; il produisoit des Extraits fort infidèles; il ne vouloit jamais reconnoître qu'il eût été calomniateur; et il avançoit impunément des Hérésies dans les Ecrits où il prétendoit réfuter les Hérétiques.* A widely different representation is given by a writer of another class. The *Schema Sacre Congregationis S. Officii Romani* is a remarkable production of a very fertile writer of the XVIIth century, and forms part of the XLVIIth volume of the Works of Francis Macedo, originally a Jesuit, and afterwards a Cordelier. and Paramo.

Tractate the zealous author traces the origin of the Inquisition up to Paradise, where the Almighty, he says, first commenced those functions as Grand Inquisitor, which He continued to exercise against Cain and the Architects of Babel. St. Peter was one of his successors, and distinguished himself officially against Ananias and Sapphira. From that Apostle the dignity was transmitted in right line to the Popes, from whom St. Dominic and all other Inquisitors derive their privileges *jure divino*. More than this, in the same extravagant and irreverent strain, may be found in the Works of Paramo, who begins the II^d Chapter of his Ist Book (*de Orig. S. Inq.*) in the following manner:—*Eodem ordine quo Deus contra primos parentes processit, juridicè etiam procedunt Inquisitores contra Hæresis labe infectos*. Nor is this all; the *san-benito* was imposed in like manner by the hands of the Deity upon our offending Parents when He gave them coats of skin. *Deus hominem de Hæresi convictum et resipiscere paratum sibi reconciliat, et in pœnam tanti flagitii laboribus*

illum addicit, tunicis pelliceis tanquam sacco benedicto induit, quod ab Inquisitoribus hodie observatur. So the confiscation practised by the Holy Office is founded upon the expulsion from Paradise, on which Adam and Eve were stripped of all their goods, *omnibus bonis eversos*. But so high an estimate of the Inquisition is by no means strictly in accordance with an old Spanish saying, cited by Puigblanch, which, besides being just in itself, sufficiently shows the uncontrollable tendency of the human mind to jest, even upon objects which impress it with the deepest terror. *Que cosa es Inquisicion?—Un Santo Christo, dos candeleros, y tres majaderos*. This blockheadism of the Judges, however, increased their capacity of ill, for it is recorded of a very recent Grand Inquisitor, who appears to have far exceeded his brethren in sagacity, that he stated himself never to have been afraid of the Holy Office till he became acquainted with its secrets, and discovered the ignorance of those by whom it was administered.

Hence came the oracles, and the many methods of divination, and
the consulting with spirits, which were all adapted to that *insatiable*
thirst men had of knowing, what God thought to conceal from them.
Stillingfleet. Sermon 12. vol. iii. p. 503.

Hence that known restlessness of covetous and eager minds, in
whatsoever state or degree of fortune they are plac'd; there being no
thorow or real satisfaction, but a kind of *insatiableness* belonging to
this condition.

Shaftesbury. Characteristicks, vol. ii. p. 156. Inquiry concerning
Virtue, book ii. part ii.

By some cross accident turning him out of his old way, he comes
to alter his course, and to pursue riches as *insatiably* as formerly he
did his pleasures; so that from a sensual epicure he is become a
covetous miser; a worthy change and conversion indeed.

Milton. Paradise Lost, book iv. l. 348.

Some are wont to have this devise, namely, in taking their time and opportunity to commend those who loue, chuse, and do the selfesame things, and briefly who are of the like conditions, and given to the same humour with themselves, do wind and *insinuate* into the grace and favour of the hearer, and by such an occasion draw his heart unto them.

Holland. Plutarch, fol. 251. Self Praise without incurring Envy

Not so quick perhaps of conceit, as slow to passion; and commonly less inventive than judicious, howsoever proving very plausible, *insinuant*, and fortunate men.

Reliquiæ Wottonianæ, p. 78. Of Education.

In the severest considerations of their persons, in their educations, in their *insinuations* into favour, in managing that favour, in their whole education, they were as distant, as unfit, as impossible for parallels as any two vertuous and great persons we can direct our discourse to.

Id. lb. p. 185. The Disparity.

God, rather than man, once in many ages, calls together the prudent and religious counsels of men, deputed to repress the incoach-

Milton. Works, vol. i. fol. 162. The Doctrine and Discipline of Divorce.

Is a man conscionable? he is an hypocrite: is he conformable? he is unconscionable: is he plaine dealing? he is rudely uncivil: is he wisely *insinuate*? he is a flatterer.

Hall. Works, vol. i. fol. 466. The Great Impostor.

Why do they not consider, that it [childhood] is therefore more docible of evill, since wickednesse is both more *insinuate* and more plausible than vertue, especially when it meets with an untutored judge.

Id. lb. fol. 640. Quo Vadis?

Horace laughs to shame all follies, and *insinuates* virtue, rather by familiar examples than by the severity of precepts.

Dryden. Dedication to Juvenal.

The counsel, finding their *insinuations* and aggravations of the charge against him so easily blown away by these and other answers, made up with passion what they wanted in the weight of reason.

Ludlow. Memoirs, vol. iii. p. 75.

Cervantes makes Don Quixote say—If the stories of chivalry be lies, so must it also be, that there ever was a Hector, or an Achilles, or a Trojan war—a sly stroke of satire, by which this mortal foe of chivalry would, I suppose, *insinuate* that the Grecian romances were just as extravagant and as little credible, as the Gothic.

Hurd. Works, vol. iv. p. 272. On Chivalry and Romance.

Give not therefore a ready ear to the officious *insinuations* of those who, under the guise of friendly concern, come to admonish you, that you ought to stand on your guard against those whom they see you disposed to trust.

Not paying; not being able, not having the means to
pay.

If his father was *insolvent* by his crime, the punishment was to go
no further than the fault, and therefore no torment was entail'd: but
if he were *insolvent* by misfortune, neither the father nor the son, for
that, could deserve any further evil.

Taylor. Rule of Conscience, book iii. ch. ii. fol. 515.

With this only caution, that if the father be under torment or
imprisonment for *insolvency* the son be no way oblig'd to that;
because whether the *insolvency* of the father be by his fault or mis-
fortune, still the son is not oblig'd.

Beattie. Moral Science, part iii. ch. i. sec. 723. p. 127.

INSOLVENT, in Law, is a term of wider import than
"Bankrupt," traders alone being subject to the Bank-
ruptcy laws, whereas the laws for the relief of Insolvent
debtors extend to all persons whatsoever. By Statute
32 Geo. II. c. 28., commonly called the *Lords' Act*,
because it was first introduced in the House of Lords,
and by other Acts enlarging its provisions, if a defend-
ant charged in execution for any debt not exceeding
£300 will surrender all his effects to his creditors,
(except his apparel, bedding, and tools of his trade,
not exceeding the value of £10,) he may be discharged
out of custody, unless the creditor, who procured his
arrest, insists on detaining him; in which case he shall
allow him three shillings and sixpence a week for his
maintenance, and on failure of regular payment the pri-
soner will be discharged. This discharge only affords
a protection to his person, and not to his lands or
effects, against which the creditor may at any future

time issue execution. If the debtor so charged in execution does not, of his own accord, make this surrender of his property, the creditor may, if he please, call upon him to do so; if the debtor refuses, he renders himself liable to transportation, and if he complies, he is entitled to his discharge. A person charged in execution is one who, having had judgment given against him in a lawsuit, and not having paid the damages or costs awarded by the judgment, is arrested and imprisoned at the instigation of the other party to the suit. The *Lords' Act* only extends to this class of Insolvents. The *General Insolvent Act* includes these with many others, being made for the relief of all persons in actual custody, upon any process whatsoever, for or by reason of any debts, damages, costs, or sums of money. There are four Commissioners of Insolvent Debtors, who have a Court in London, and make three circuits every year for the convenience of Insolvents in the country. These Commissioners must be Barristers of ten years' standing, and they are appointed by the Crown. The prisoner, within fourteen days after the commencement of his imprisonment, must petition the Commissioners for his discharge, and at the same time he must execute an assignment, for the benefit of his creditors, of all his estate, both real and personal, which he may either then possess, or acquire at any time afterwards, before he obtains his final discharge. He must also deliver a schedule containing a true account of his name, profession, debts, credits, and effects. On all these matters he will afterwards be examined before the Commissioners, and his creditors are invited to attend the examinations for the purpose of assisting in the investigation and opposing his discharge, if they think fit. If it appear that the Insolvent has been guilty of no fraudulent or improper conduct, and that he has made a full and fair disclosure of every thing, the Commissioners may grant him his discharge forthwith; if, on the contrary, he has fraudulently kept, altered, or concealed any of his books or papers, or fraudulently discharged or concealed any debt due either to or from him, or fraudulently made away with any of his property, he may be detained for three years; and for fraudulently contracting debts without any prospect of being able to pay them, and for various other kinds of misconduct, he may be detained for two years. His discharge, when obtained, protects his person against arrest for any of the debts mentioned in his schedule. Debts omitted therefrom are in nowise affected by these proceedings. If at any future period the Insolvent should become possessed of any property, a creditor, whose debt is mentioned in the schedule, may, with the sanction of the Commissioners, take it in execution, and divide it rateably amongst his fellow-creditors and himself. This process is very seldom had recourse to, being troublesome, and attended with some risk to the creditor who applies to the Commissioners for the purpose: but it is the only mode by which such creditors can reach the future estate of the Insolvent, the discharge being a sufficient defence against all other proceedings.

Warburton. Works, vol. ii. p. 16. The Divine Legation, book ii. sec. 4.

INSTITUTION, as is shown above by Blackstone, is the act by which a Clerk is invested by the Bishop, or one commissioned by him, with the spiritualities of a Benefice. Before Institution, the Clerk must take before the Ordinary, or his Substitute, the oath against simony, the oaths of allegiance and supremacy, and the following oath of canonical obedience. "I, A. B., do swear that I will perform true and canonical obedience to the Bishop of C. and his successor in all things lawful and honest; so help me God;" and also if it be a vicarage he shall swear, "I, A. B., do swear that I will be resident in my Vicarage of —, in the Diocese of —, unless I shall be otherwise dispensed withal by my Diocesan; so help me God." He must also, in the same presence, subscribe the XXXIX Articles, and the three Articles recited in the XXXVith Canon, concerning the King's Supremacy, the lawfulness of the Common Prayer, and the validity of the XXXIX Articles; which last subscription, after the signature of the Articles themselves, may be considered a very unnecessary repetition. He must likewise subscribe a declaration of conformity to the Liturgy, and obtain a certificate from the Ordinary that such subscription has been made, which, after Induction, he must publicly read in his Church.

At the time of Institution the Clerk kneels down before the Ordinary, who reads the words of Institution out of a written instrument, with the Seal Episcopal appendant, which the Clerk, during the ceremony, is to hold in his hand. An entry thereof is then made in the Ordinary's Register. It is advisable that the Clerk have trusty witnesses of all these oaths

and subscriptions, who should indorse the instruments, and sign a memorandum to be kept by the Clerk. The Church by Institution is full against all persons except the King, and the Clerk may enter upon the parsonage house and take the tithes; but he cannot let, grant, or sue for them till after Induction, for which he receives a written mandate from the Ordinary. The first beginning of Institutions to Benefices in England was in a National Synod held at Westminster, A. D. 1124; for Patrons originally filled all Benefices by Collation and Livery, till this power was taken from them by the Canons. (Selden, *Hist. of Tythes*, c. 6. 9.)

[Musike] teacheth vpon harmonie

A man to maken melodie

By voice and soun of *instrument*

Through notes of accordement.

Gower. Conf. Am. book iv. fol. 142.

Pallas, when she had invented a pipe, caste it awaye, not so muche, sayth Aristotle, because it deformed her face, but muche rather because such an *instrument* belonged nothinge to learninge.

Ascham. Works, p. 7. Toxophilus, book i.

Seeing one that shone in armour faire,
On goodly courser, thund'ring with his feet,
Eftsoones supposed him a person meet,
Of his revenge to make the *instrument*.

When arked Noah, and seuen with him,
The empty'd world's remaine,
Had left the *instrumentall* meane,
Of landing them againe.

Warner. Albion's England, book i.

But that it is lawful to depose a tyrant, and to punish him according to his deserts; nay, that this is the opinion of very eminent diuines, and of such as have been most *instrumental* in the late Reformation, do you deny it if you dare.

Milton. Works, vol. i. fol. 454. A Defence of the People of England, &c.

For according to the ancient Mythology, Japetus signified the Heaven, and Japeti Satus, or Prometheus, the Son of the Heaven, the Divine providence which Almighty God exercised by the *instrumentality* of the heavenly motions.

Hale. Origin of Mankind, ch. i. sec. 3.

Therefore I say that the formation of the bodily, much less the animal nature of man, in order to the reception of the soul, was neither coordinately nor *instrumentally* the work of angels.

Id. Ib. ch. v. sec. 4.

The *instrumentalness* of riches to works of charity, has rendered it very political, in every Christian commonwealth, by laws to settle and secure propriety.

Hammond.

Ingenious to their ruin, every Age
Improves the arts and *instruments* of rage:
Death-hastening ills Nature enough hath sent,
And yet men still a thousand more invent!

Waller. Instructions to a Painter.

Dauntless they enter, Cymon at their head,
And find the feast renew'd, the table spread:
Sweet voices, mix'd with *instrumental* sounds,
Ascend the vaulted roof, the vaulted roof rebounds.

Dryden. Cymon and Iphigenia.

This I set down, to let the world see that Cranmer was not at all concerned in those niceties, which have been so much inquired into since that time, about the *instrumentality* of faith in justification.

Burnet. History of the Reformation, Anno 1540.

The 13th I took the height of it *instrumentally*, standing near the seaside, which I found to be 34 minutes, the sun being 28 degrees high.

Boyle. Works, vol. v. p. 709. The General History of the Air.

Whence it is plain, that by faith we are here and elsewhere, as often as it is supposed to act *instrumentally* for our justification, to understand that only which worketh by charity, and which is the same with the new creature, and containeth in it the keeping of God's commandments.

Bishop Bull. Works, vol. iii. p. 100. Life by Nelson.

The physical laws of nature are the rules according to which the Deity commonly acts in his natural government of the world; and whatever is done according to them, is not done by man, but by God, either immediately, or by *instruments* under his direction.

Reid. Essay 14. vol. iii. ch. ix. p. 411.

INSTRU-
MENT.

INSTRUMENT.
—
INSUBSTANTIAL

Therefore, music merely *instrumental* is to a certain degree imperfect; unless we are led by custom, or by some outward circumstance, to assign it a definite meaning.

Beattie. *Moral Science*, vol. i. part i. ch. i. p. 116.

How happens it then, that, in both these cases, notwithstanding the foreign mixture of the *instrumentality* of matter, and the manner of knowing, we attain an adequate idea of God's wisdom and power?

Warburton. *Works*, vol. ii. p. 243. *The Divine Legation*, book ii. Appendix.

From thence they will argue, that the end being essentially beneficial, the means become *instrumentally* so.

Burke. *Works*, vol. ix. p. 362. *On the Popery Laws*.

INSTYLE, also written *Enstyle*, *q. v.* Lat. *stilus*, the instrument with the point of which they wrote on waxen tables.

To inscribe, *sc.* the name or title; to call by name or title to name or entitle.

This Henry's uncle, and his next of blood,
Was both protector of the realm, and king,
Whose meekness had *instyled* him the good
Of most especial trust in every thing.

Drayton. *The Miseries of Queen Margaret*.

But Blackwater comes in, through many a crooked way,
Which Pant was call'd of yore; but that, by time exil'd,
She Froshwell after hight, then Blackwater *instyl'd*,
But few such titles have the British floods among.

Id. *Poly-olbion*, song 19.

Whereof, I avow, I account nought at all, knowing no age so
Justly to be *instiled* golden, as this of our sovereign lady queen Anne.

Gay. *The Shepherd's Week*. *The Proeme*.

INSUAIVITY, Fr. *insuave*; Lat. *insuavis*, *insuavitas*; *in*, privative, and *suavis*, sweet, pleasant.

Unpleasantness.

All fears, griefs, suspicions, discontents, imbonities, *insuavities*, are swallowed up, and drowned in this Euripus, this Irish Sea, this Ocean of Misery.

Burton. *Anatomy of Melancholy*, fol. 215.

INSUBSTANTIAL, Fr. *insubstantiel*. It is more usually written *Unsubstantial*; *in*, privative, and *substantial*, from *substance*; Lat. *substantia*, from *substans*, *standing* under, (*sub*, under, and *stans*, *standing*.) See SUBSTANCE.

Not able to *stand* under or support; having no steadiness, firmness, or solidity; infirm, unsolid.

————— The great globe it selfe,
Yea, all which it inherit, shall dissolve,
And like this *insubstantiall* pageant faded
Leaue not a racke behinde.

Shakspeare. *The Tempest*, fol. 15.

The delicate threads [of a spider's web] are so nicely disposed, and so curiously interwoven one with another, that you would think it produced by the labour of a celestial being; yet nothing in the event is more fragil and *insubstantial*.

Harte. *Thomas à Kempis*. *A Vision*, note 36.

INSUCCESSFULNESS, also written *Unsuccessfulness*, *q. v.* The adjective is commonly written *Unsuccessful*; *in*, privative, and *successfulness*, from *success*, *q. v.* Lat. *successus*, from *succedere*, to come up to, (indifferently good or ill, gain or loss.)

INSUCCESSFULNESS.
—
INSUFFERABLE

Failure in coming up to, reaching or attaining the end or object in view.

To this I may answer, that as no man should suspect the sufficiency of religion by its *insuccessfulness*, so if the *insuccessfulness* be confessed, we shall as little disparage religion, by bringing in more aids, when it is in action, than a general dishonours himself by endeavouring, with more of his own forces, to make sure an attempt that hath a while miscarried.

Davenant. *Preface to Gondibert*.

INSUE, more commonly written *Ensue*; *in*, and *sue*; Fr. *suyure*; It. *sequire*; Lat. *sequi*, to follow.

To follow, to succeed, to come next after; to result from.

The iudge considering the perillous example, and incōuenience that mought therby *insue*, with a valyant spirite and courage, commanded the prince vpon his alegeance, to leaue the prisoner, and depart his way.

Sir Thomas Elyot. *The Governour*, book ii. ch. vi.

————— Who hired were
Into the Grecian camp th' *insuing* night to go,
And feign they were stol'n forth.

Drayton. *Poly-olbion*, song 1.

INSUFFERABLE, } Sp. *insuffrible*; from the
INSUFFERABLY. } Lat. *in*, privative, and *sufferre*, to bear under, (*sub*, under, and *ferre*, to bear.)

That cannot be borne, supported, sustained, tolerated, or endured; insupportable, intolerable.

Then she, who to that time still with a smoothed brow
Had seem'd to bear the breach of Locrine's former vow,
Perceiving still her wrongs *insufferable* were.

Drayton. *Poly-olbion*, song 6.

Who can be ignorant that woman was created for man, and not man for woman, and that a husband may be injur'd as *insufferably* in marriage as a wife?

Milton. *Works*, vol. i. fol. 200. *The Doctrine and Discipline of Divorce*.

I was then discouraged in the beginning of my attempt; and now age has overtaken me; and want, a more *insufferable* evil, through the change of times, has wholly disenabled me.

Dryden. *Dedication to Juvenal*.

His [Persius] figures are generally too bold and daring; and his tropes, particularly his metaphors, *insufferably* strained.

Id. *Ib.*

As the main end of poetry is to please, if it did not reach that point (which it could not do by stopping ever so little on this side excellence) it was, like indifferent music, indifferent perfumes, or any other indifferent thing, which we can do without, and whose end should be to please, offensive and disagreeable, and for want of being very good, absolutely and *insufferably* bad.

Hurd. *Works*, vol. i. p. 2. *Horatii Flacci*, &c.
